

*Investment Managers, Bankers, Brokers, Advisors, Media ...*

# Write and talk to your investors in a fresh language – unspoiled by brokerese and ho-hum investment jabber

*... and watch them come to your door*

You can do this with me, George Miller, a financial writer with a rare additive ... *Investor Face-Time*.

Thousands of encounters in the street, over the desk, phone, and seminar platform as a broker, financial planner, and investor relations worker have fused me with investors more intimately than ever possible solely from a writer's desk.

To you, this means that a boundless interest in your investor's well being will shine forth in every piece I write for you – and all with one pure purpose ...

**... to bring you more quality investor activity than you've ever had before**

With clear, matter-of-fact writing free from distrusting investment hype, I will aim to

- single you out from other investment choices
- separate you from your competition
- get you more noticed in today's high-noise overcrowded investor markets
- build interest and commitment from your brokers, market makers and analysts, and
- grow your shareholder / client base to a record level

Question for you ... How many writers would put their relationship with you on the line based on their performance numbers? I will. You see, I've been a businessman with bottom-line responsibility all my working life. And if I can't improve what you're already doing, I'll be the first guy to tell you.

If we get together, you'll quickly see how my financial / securities background equips me to step right into your mindset so **you won't have to spend endless hours educating me on your business.**

You'll find working with me pleasant and hassle free. I'm fast and meticulous. I'll respect your wishes, and will jump through hoops to meet your toughest standards and deadlines.

Look over my bio and list of recent projects inside. Then fax, mail, or e-mail the info request form. Or better yet, call me. **407/333-9607.**

Let's go to work!

George Miller
