

Metalogix® Essentials for Office 365

The complete analysis, migration and management solution for Office 365

Moving large amounts of content from multiple sources — whether it's Box, Dropbox or Google Drive — to Office 365 can be a massive undertaking for any organization. The amount of planning and preparation needed for a successful migration not only ends up consuming a significant amount of time from the day-to-day operations of administrations, but it can also negatively impact business continuity, IT stakeholders and end users. As organizations integrate the cloud into their operations, performing the analysis and administration necessary to maintain an efficient collaboration environment can become even more complicated and resource draining.

Metalogix® Essentials for Office 365 offers a complete solution for Office 365 pre-migration analysis, migration and management. By taking advantage of its architecture visualization, reorganization functions and on-the-fly remediation options, your organization

can significantly ease your pre-migration and migration requirements, as well as your post-migration cleanup. Essentials' single console makes moving and reorganizing content easy, and it provides administrators with a quick and effective way to manage permissions and licenses, report on multiple services across the Office 365 stack and gather key intelligence about user adoption.

FEATURES

Single-hop migration to the cloud

Move content from SharePoint Online, OneDrive, another Office 365 tenant, Google Drive, Box, Dropbox, personal drives and file shares into Office 365 and OneDrive for Business. The Essentials for Office 365 migration tool allows you to migrate tenants, site collections, sites, lists, libraries, content, workflows, web parts, permissions, metadata, term stores and more — individually or in bulk.

Metalogix Essentials for Office 365 offers a complete solution for Office 365 pre-migration analysis, migration and management.

BENEFITS:

- Migrate content from multiple sources into Office 365.
- Minimize time spent preparing and strategizing your migration.
- Drive Office 365 adoption with easy-to-read activity and usage reports.
- Gain insight into external sharing, broken inheritance and content left without proper permissions.
- Simplify the administrative workload around Office 365 and automate the management around multiple Office 365 services.
- Manage your own backups of SharePoint Online and OneDrive for Business content and enable a quick recovery—in seconds, not weeks.

SYSTEM REQUIREMENTS

SUPPORTED SOURCE SYSTEMS

Office 365

SharePoint Online

SharePoint 2007, 2010, 2013, 2016

OneDrive

Exchange Online

Skype for Business

Google Drive

Box

Dropbox

File shares

File system

Public folders

Comprehensive migration and content management

Regardless of the source environment, preserve values for lookup fields, managed metadata fields and approval status, as well as convert string, choice lookup, managed metadata and person/group fields into a desired target field type. Use on-the-fly remediation and conversion functionalities, and handle everything from pre-migration planning and tenant-to-tenant migrations to managing and reporting on users and content. Quickly back up and recover business-critical content from SharePoint Online and One Drive for Business.

Pre-migration analysis

Identify potential pain points in your onboarding process with easy-to-read reports and fix problems before they become roadblocks in your migration. Incompatibilities, disallowed file types and potential hindrances to your migration are color-coded by order of severity to allow for quick and painless remediation.

Post-migration validation

Eliminate the need for manual post-migration validation by logging the operations undertaken during a migration and detailing them as a success or failure. Failed items are listed with error explanations and can be reprocessed with the click of a button.

Lifecycle management for Office 365

Perform the lifecycle management of an Office 365 environment from a single, unified platform. Easily add or remove users, bulk assign licenses, customize license provisioning and more. From onboarding, day-to-day user and environmental analysis, and license and storage quota optimization, to security and backup and restore operations, Essentials reduces administrative workload and helps you maintain control over your Office 365 taxonomy long after completing your migration.

It also helps to archive business-critical content to on-premises Azure or S3 storage when it needs to be removed from your Office 365 tenant.

Actionable reports

Easily report on what was moved successfully and what issues were encountered during your Office 365 migration. Once migrated, keep the momentum going with preset reports that help you understand the state of your Office 365 environment, along with user adoption and usage trends.

Single, extensible platform

Administer your Office 365 environment without disparate administrative portals and custom PowerShell scripts, and enable powerful analysis, remediation, migration, backup and security functionalities. Utilize multithreading and an agentless, single install solution to get the most performance and compatibility out of the resources made available through Office 365.

Intuitive user interface (UI)

Make migrations easy to track, monitor and report on — at the source, within the Azure container space or at the final destination — with an intuitive UI and advanced logging capabilities. With Essentials for Office 365, you can pause and resume your migration as needed to incorporate ongoing business demands, and ensure your move is smooth and completed on time.

USE CASES

Metalogix® Essentials for Office 365 enables you to quickly and easily:

- Consolidate content into Office 365.
- Automate administrative tasks.
- Prevent administrative overload.
- Reallocate unused licenses.
- Maximize the utility of available Office 365 services.

ABOUT MERGER IT
