

MILK PREGNANCY TESTING

Animal Health Laboratories fully validated Milk Pregnancy test accurately detects pregnancy from 28 days post breeding using milk samples. It is a cost-effective way to maximise overall herd health management programs. This is an ELISA test which accurately determines whether or not a cow is pregnant.

Key Facts

- Non invasive
- Effective: Comparable accuracy to scanning
- Sample can be taken from 28 days post service for accurate results
- No stress for the cows or the farmer and pregnancy testing gets done with no extra labour
- Fast Turnaround
- Results sent direct to you

How do you get your samples to us?

Simple, just follow these 4 steps:

1. Fill each 20ml pot with your cows milk sample and write the last three digits of the cow number on top or side of pot.
2. Post or drop the samples to us here at Animal Health Laboratories, Shinagh House, Bandon, Cork within 24 hours of taking them. Please ensure you have your name, address, phone number and herd number enclosed with the samples.
3. We will send you the result the day after they are tested.
4. Contact us on 023 8854100 for more information

Disclaimer

The test result is based on the quality and integrity of the sample received to the Laboratory. No responsibility is accepted for incorrect results arising from mis-identification or poor-quality sample prior to arriving at the lab.
