

## **Get A Head Start With Pre-Season Services for a Trouble-Free Pool Season!**

### **PRE-SEASON CHEMICAL TREATMENT**

(Mesh Style Winter Covers)

This service/procedure is important if you plan on opening your pool after the second week of May when the temperatures rise. This treatment prevents severe algae bloom, reducing start-up time and expense.

Preseason Chemical Treatment is performed on pools with mesh winter covers.

Cover is removed, pre-treat chemicals are applied to pool, winter chemical dispenser is filled, pool walls and floor are brushed and cover is re-installed.

### **PRE-SEASON FILTER CLEANING**

Your pool filter is a key component of a swimming pool's filtration system. Many may not realize that the filter needs to be cleaned periodically to ensure proper equipment performance and cleanliness of the pool water.

There are generally 3 types of filters; Cartridge, Sand and Diatomaceous Earth (DE).

It is always a good idea to properly clean your DE or Cartridge filter at least once a year. Sand filter media should be replaced every 3-5 seasons of use.

As the filter does its job, the debris in the water accumulates in the filter media. The filter slowly gets clogged with debris and the pressure rises. Backwashing doesn't remove all the dirt and debris.

Checkers Pools Provides Pre-Opening Chemical Treatment Service  
&  
Pre-Season Filter Cleaning Service

We will pick up filter elements, neatly remove from your property, bring to our facility to disassemble, thoroughly clean and replace any faulty parts. There will be no toxic debris left on your property that could cause damage to grass or foliage.
