

# **Breezy Brows**

**Microblading by Mandy**

## **EYEBROW AFTERCARE INSTRUCTIONS**

**PLEASE PAY VERY CLOSE ATTENTION TO THE INSTRUCTIONS.**

### **DAYS 1-3**

- Use clear antibiotic ointment for 24 hours, then switch to Vaseline or A&D ointment for the remaining.
- When applying ointments, each morning and night before a shower or workout, apply product and leave it on for five to ten minutes, then dab dry with tissue or cotton.
- Keep out of the sun. After seven days, wear sunscreen to aid the longevity of your brows.
- On the last day, you will start to see scabbing. Do NOT pull off, you could risk taking off the pigment. Allow it to flake off by itself.

### **REMAINING DAYS**

- Do not use makeup on the brows for at least 5 days.
- After the procedure is completely healed, you may go back to your regular cleansing and makeup routine.
- Avoid scrubbing the area. Use sunscreen after the procedure area is healed to protect from sun fading.

### **IMPORTANT TO REMEMBER**

- Never touch the procedure area without washing your hands immediately before.
- FAILURE TO FOLLOW AFTER CARE INSTRUCTIONS MAY RESULTS IN INFECTIONS, PIGMENT LOSS OR DISCOLORATION.
- CAUTION; If the skin around the eyebrows breaks out in a heat rash, small pimples, this is usually a reaction to the numbing solution and should go away by itself in a couple weeks, do not pick. Please call immediately if this occurs so a technician can make note of the reaction and follow up to ensure this is not a more serious situation.
