

NEURO - RECOVER PROGRAM using a medical therapy of NAD

Why does NAD help Addiction?

NAD or Nicotinamide Adenine Dinucleotide is a simple metabolic coenzyme of Niacin, vitamin B.

- **Niacin is a B Vitamin that is involved in energy production in every mitochondria of your body.**
 - **It has been used since the 1930s to help people detox off of alcohol, opiates, stimulants and tranquilizers.**

- **We know people afflicted with drug and alcohol abuse have an NAD deficiency state.**
 - **For example, for every molecule of alcohol metabolized we use an equal amount of NAD.**
 - **We know a low NAD ratio is associated with a craving for drugs and alcohol.**

The intravenous infusion of NAD significantly decreases any withdrawal symptoms and fosters a sense of well being.

- **Dopamine neurons within the reward circuit of the brain appear to be restored and normalized.**
 - **By the end of the intravenous infusion patients are no longer in withdrawal and report no craving or desire to use.**

What is the NAD IV Treatment Process?

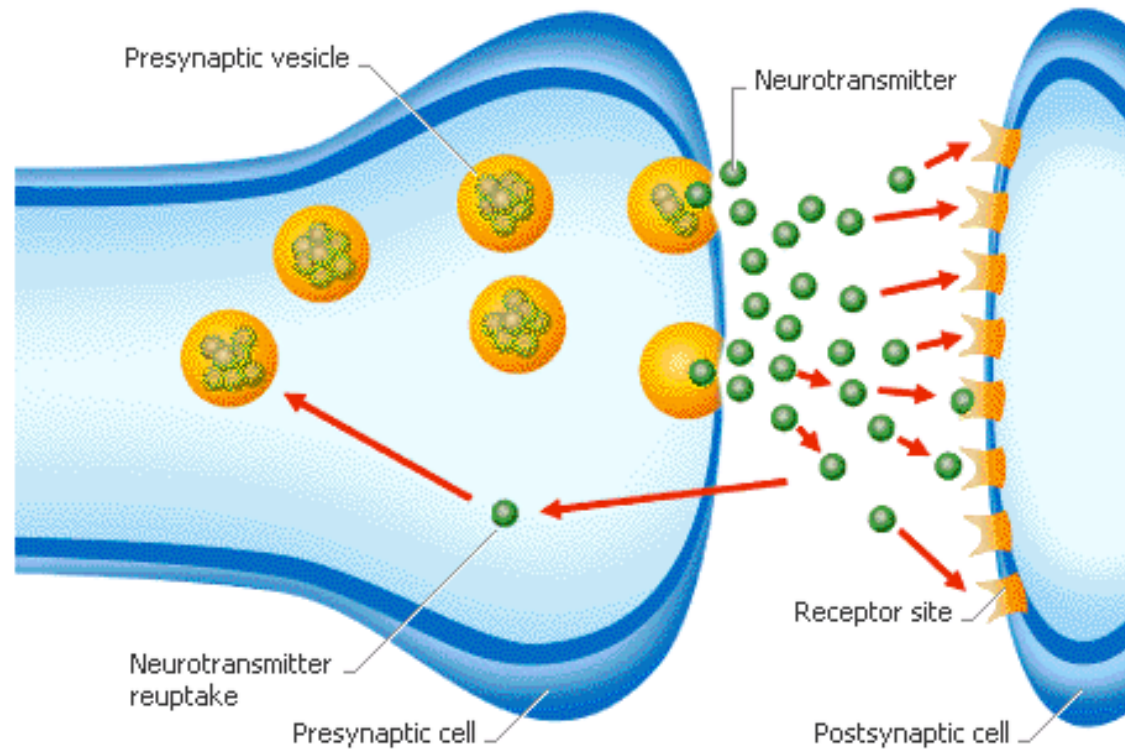

Side Effects?

Studies show that using high doses of vitamins, minerals and amino acids for short periods of time present negligible adverse effects.

In fact, the most commonly reported side effect with NAD therapy is feeling only slightly flu-like, which seems to pass rapidly.

- ***NAD IV therapy usually requires one infusion per day for a period of ten days. A facility physician develops an individualized treatment plan for each patient, including the precise NAD mixture. At the beginning of each day, a trained nurse will insert an IV and begin to slowly infuse the NAD mixture. Withdrawal symptoms reportedly begin to subside in just a matter of minutes.***
- Patients are able to comfortably relax while the formulation is delivered over a period of approximately eight hours. Some reports indicate NAD therapy can reduce withdrawal symptoms by 70-80 percent after 3 days of treatment.
- ***Between the fourth and eighth day, patients typically report feeling better, with increased mental clarity. However, it is important to note that patients must complete each infusion process in order to eliminate or minimize cravings. More importantly, after receiving NAD IV therapy, each patient must deal with the psychological aspects of addiction, otherwise a relapse is inevitable.***
- Though NAD IV therapy will need additional research and evaluation, the treatment does seem to produce positive results among patients struggling with addiction. Early data seems to indicate the highest success rates with NAD are among [alcohol](#) and [opiate addicts](#).

Brain Dis-ease & Neurotransmitter Dysfunction

NAD Intravenous Treatment History

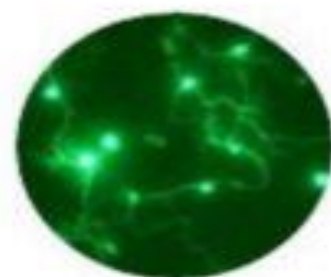

- Extensive Research has been documented in the success of NAD treatment of ALL forms of substance abuse patients.
- Although the treatment is relatively new to the US, NAD therapy has actually been around since 1961. Its first use was recorded in South Africa.
- The first addiction treatment clinic in US to utilize NAD therapy was located in Springfield, Louisiana. The center was founded by psychotherapist Paula Mestayer and her husband Richard, who was a practicing psychiatrist at the time. After conducting intensive research into NAD therapy for addiction, they opened Springfield Wellness Center in 2001 and have since treated over 1,000 patients. Many other medical centers have opened in California, Florida and Arizona. We are the only in the Midwest.
- Research supports that 80% of all substance abuse addiction patients completely recover from their addiction when properly treated with Intravenous and Oral NAD Formulas.

**IN UNITED STATES ABOUT 7 OTHER MEDICAL DOCTORS ARE TREATING THE
MEDICAL CONDITION OF OPIATE ADDICTION WITH NAD+
THE AVERAGE SUCCESS RATE REPORTED IS BETWEEN 85% AND 92.**

**WITH ELIMINATING THE CRAVINGS, AND REALIGNING THE ADDICT'S
NEUROTRANSMITTERS, SEROTONIN, DOPAMINE, GIVES THEM THE POSSIBILITY
OF BEING CLEAN AND FREE FROM THE ADDICTION.**

**THE TRADITIONAL REHAB CENTERS ARE NOT ADDRESSING THE MEDICAL
CONDITION OF THE SEROTONIN AND DOPAMINE.
THE SUCCESS RATE IS COMMONLY KNOWN AS LOW AS 9 TO 12%**

**THE OTHER CLINICS ARE IN CALIFORNIA, ARIZONA, FLORIDA AND LOUISIANA
EMERALD NEURO - RECOVER CENTERS
ARE THE FIRST IN THE MIDWEST TO SERVE THE HURTING.**

NAD Therapy

Our Treatments

A Breakthrough Treatment for Addiction, Depression, PTSD, Stress and Chronic Fatigue

We utilize NAD Infusion Therapy and oral amino acids to eliminate cravings, minimize withdrawal and restore wellbeing. We support the rapid cleansing from addictive substances with minimal discomfort and the restoring of healthy brain function for a more energetic, happier, craving free life.

- Rapidly detox from addictions without the agony of intense withdrawal
- Eliminate or minimizes incessant cravings – the primary cause of relapse
- Restore personal energy, clarity and a sense of wellbeing
- Replenish your brain to improve cognitive function
- Reverse the damage that chronic or acute stress has done to your brain
- Rediscover your inner calm and natural happiness
- Set the stage for long-term recovery

Proven Fast, Safe & Effective at “Accelerating the Detox Process” Restoring Serenity and Hope to Recovering Addicts & Alcoholics A Critical Milestone in the Advancement of Drug and Alcohol Treatment.

This is a detoxification and replenishing treatment that utilizes an infusion of a natural co-enzyme of Vitamin B3 (NAD) and other nutrients to minimize withdrawals, reduce or eliminate cravings and restore clarity and wellbeing. Research in the 1960s demonstrated it’s compounding effectiveness in detoxifying patients from alcohol, opiates, pain pills, tranquilizers, and stimulants. This outpatient treatment offers a jumpstart to recovery and a first step in long term recovery from addiction.

How Does it Work?

Our nursing staff administers NAD slowly, over 8 or more hours at first, to minimize discomfort. Typically, treatment requires all-day infusions for one to two weeks in a row, Monday through Thursday, depending on the issue being addressed. Treatment is outpatient only - patients do not stay overnight.

Our medical staff administers the all-natural nutrient IV infusion in an individually formulated dosage based upon the patient’s medical history. The protocol for addiction treatment is typically eight to ten days, but may run longer for certain drug or combined drug addictions. The protocol for PTSD and other depression or anxiety disorders is generally only four days. Treatment is provided on an outpatient basis—meaning patients do not stay overnight.

Heroin Detox

At Florida Detox®, We Specialize in Heroin Detox

Heroin Addiction

Scientific Addiction Treatment – Opiate Detox

With our scientific addiction treatment, you will spend 2 hours a day in our clinic receiving our proprietary all natural intravenous amino acid and toxin removal therapy. You do not need to be “locked up” in a rehab facility. We will optimize your Brain and Body to stop your craving for Heroin. You will no longer need heroin to calm your anxious brain. Furthermore, you will not go through painful heroin withdrawal symptoms.

Scientific Addiction Treatment – Stops Heroin Craving

Heroin Detox is only the first step of our addiction treatment. A drug detox is worthless if you relapse. Through treating 7000 addicted patients, we have learned that Detox and Counseling are not enough to prevent relapse – we must optimize your brain function. This requires quickly healing drug-induced brain damage while simultaneously correcting drug-induced deficiencies of brain neurotransmitters and hormones.

Dr. Sponaugle has designed a Brain and Body Wellness Program that is included in any drug detox program. Using all natural, intravenous amino acid and toxin removal therapy, we can accomplish significant brain healing in weeks. Our scientific addiction treatment will optimize your brain chemistry and stop your heroin craving!

PLEASE NOTE!

THIS DETOX CENTER STATES:

THROUGH TREATING 7000 ADDICTED PATIENTS, WE HAVE LEARNED THAT DETOX AND COUNSELING ARE NOT ENOUGH TO PREVENT RELAPSE- WE MUST OPTIMIZE YOUR BRAIN FUNCTION. THIS REQUIRES QUICKLY HEALING DRUG-INDUCED BRAIN DAMAGE WHILE SIMULTANEOUSLY CORRECTING DRUG-INDUCED DEFICIENCIES OF BRAIN NEUROTRANSMITTERS AND HORMONES.

USING ALL NATURAL, INTRAVENOUS AMINO ACID AND TOXIN REMOVAL THERAPY, WE CAN ACCOMPLISH SIGNIFICANT BRAIN HEALING IN WEEKS. STOP THE CRAVINGS!!!

WHAT IS NAD

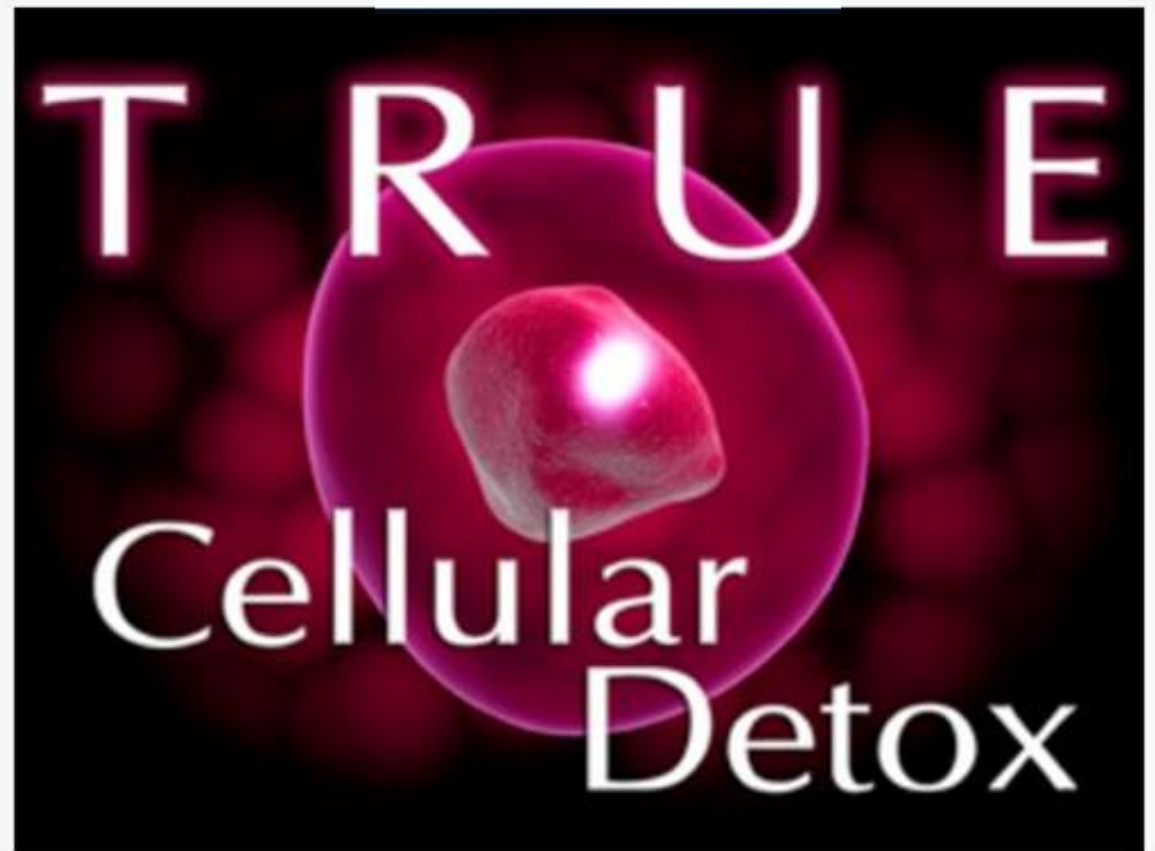

Cellular Detox Centers

NAD is an Amazing Medical Breakthrough in Modern Neuro Cellular Restoration

You are about to join the thousands of people who are already taking advantage of the latest breakthrough in the science of aging and addictions. You may be facing unique age-related health concerns or an addiction of some kind, and for the vast majority of human beings living on this planet things are only going to get harder as your body grows older. Fortunately, studies have shown that raising levels of NAD+ may reverse many of the effects caused by aging and addictions

Healthy Aging, Cardiovascular Health and Brain Health

1. Our Cellular Detox Centers (NAD) treatments is an innovative approach that eases the discomfort of withdrawal, reduces cravings, produces a total mind and body cellular restoration, and speeds up the detox process. It consists of

Opiate, Heroin, Pain Pill Detox Treatment

When patients are ready to finally end the madness and stop taking opiates like heroin or pain pills they're beginning a difficult journey.

The most valuable service we provide is educating patients about available treatment options. For both the patient and for us to be successful we have to meet the patient where they are. We offer an evolving multi-model treatment strategy. Patients can benefit from symptomatic treatment for acute withdrawal, Medication Assisted Treatment (MAT) with Buprenorphine Products (Suboxone, Subutex, Zubsolv, Bunavail) or maybe they're ready for a naltrexone product to decrease cravings and relapse.

Our Intensive Medical Detox Program with the NAD+ infusion is the most comfortable program available to successfully detox off opiates with minimal withdrawal and minimal lasting cravings. This is anywhere from a 10 day to 15 day Partial Hospitalization program with direct Medical Supervision.

It all begins with a comprehensive assessment and treatment plan. So please contact the clinic and talk directly with one of our dedicated counselors or to Dr. Starr directly for any questions.

Conditions Successfully Treated with NAD+ Therapy or Brain Restoration Therapy BR+

Opiate Dependence
Alcohol Dependence
Stimulant Dependence
Reflex Sympathetic Dystrophy
Parkinson's Disease
Dementia
Chronic Migraine Headaches
PTSD
Interstitial Cystitis
Depression / Anxiety

Ken Starr MD Wellness Group serves San Luis Obispo County, Santa Barbara County, Paso Robles, Atascadero, Morro Bay, Cambria, Los Osos, Nipomo, Santa Maria, Grover Beach, Lompoc, Vandenberg, Arroyo Grande, Pismo Beach and the California Central Coast. We are the Central Coast Drug and Alcohol treatment center for excellence in Addiction Recovery.

NAD IV Therapy

- One of the newest holistic treatments in the field of [addiction recovery](#) is an amino acid therapy,
- Nicotinamide Adenine Dinucleotide (NAD) is a metabolic co-enzyme and is charged with the important job of structuring, repairing, and remodeling every cell in the body.
- These specialized enzymes require constant replenishment in the body. Unfortunately, drug and alcohol abuse prompt the human brain to reorganize, particularly on a cellular level.
- This process, known as neuroadaptation, is directly responsible for addiction-related brain damage and depletion of neurotransmitters.
- NAD IV therapy is said to replenish the drained enzymes and target brain restoration.

The History of NAD Therapy

- Although the treatment is relatively new to the US, NAD therapy has actually been around since 1961.
- Its first use was recorded in South Africa.
- The first addiction treatment clinic to utilize NAD therapy was located in [Springfield, Louisiana](#). The center was founded by psychotherapist Paula Mestayer and her husband Richard, who was a practicing psychiatrist at the time. After conducting intensive research into NAD therapy for addiction, they opened [Springfield Wellness Center <http://www.springfieldwellnesscenter.com/>](#) in 2001 and have since treated over 1,000 patients.

Reversing Aging: Not as Crazy as You Think

Harvard researchers find a new compound that can make old cells young again

What makes cells age? Wear and tear, yes. But biologically, says, Dr. David Sinclair, professor of genetics at Harvard Medical School, it's lack of oxygen that signals cells that it's their time to go. Without oxygen, the energy engines known as the mitochondria become less efficient at turning physiological fuel like glucose into the energy that the cells need to function. Eventually, they shut down.

But in a paper published in the journal *Cell*, Sinclair and his colleagues describe for the first time a compound naturally made by young cells that was able to revive older cells and make them energetic and youthful again. In an experiment in mice, the team found that giving older mice a chemical called NAD for just one week made 2-year-old-mice tissue resemble that of 6-month-old mice (in human years, that would be akin to a 60-year-old's cells becoming more like those belonging to a 20-year-old).

RELATED

What's the Fastest-Aging Cell in the Body? (Hint: It's Not Skin)

Brain Aging May Depend on Childhood Intelligence

As mammals age, says Sinclair, levels of NAD drop by 50%; with less of the compound, the communication between the cell and its mitochondrial energy source also falters, and the cell becomes vulnerable to common aging assaults — inflammation, muscle wasting and slower metabolism. By tricking the cell into thinking it's young again, with adequate amounts of NAD, aging can theoretically be reversed. "When we give the molecule, the cells think oxygen levels are normal and everything revs back up again," Sinclair says.

While NAD may be a key to the fountain of youth, Sinclair, who also investigated the anti-aging effects of the red-wine compound resveratrol, isn't ready to say that the chemical could lead to immortal cells. "I wouldn't take it that far," he says. "What makes reversing aging interesting is that it could buy more time than we are currently looking at."

His next step is to put NAD in the drinking water of his mice, and see if they take longer to develop the typical chronic diseases linked to aging, such as inflammation, muscle wasting, cancer and diabetes. The pathway may become an important target for cancer researchers as well, since tumors typically grow in low-oxygen conditions and are more common in older patients.

Because NAD is a naturally occurring compound that simply declines with age, Sinclair is optimistic that boosting its levels in people won't have as many significant adverse effects as introducing an entirely new compound might. "If a body is slowly falling apart and losing the ability to regulate itself effectively, we can get it back on track to what it was in its 20s and 30s," he says.

At least that's the hope.
