- Real-time test strategy session
- Study road map for exam success
- Final exam (to validate readiness)

How to Register

Visit: <http://dodtc.com/registration> (The price is \$695 for a limited time only)

Description

This is an 8 week CISSP preparation course that has been designed to leverage the benefits of self-paced study flexibility with traditional classroom/online based instruction. All live sessions will be recorded and made available to students immediately following the session.

Expectations and Goals

The goal of this 8-week program is to teach students the skill and techniques necessary to pass the CISSP exam on the first attempt. We provide a focused and proven approach to aide in the understanding of core concepts and provide insight into what ISC2 expects CISSP candidates to know to pass the exam. The 8 instructor lead sessions will focus on key concepts that must be understood to pass the exam. Each session will end with a Q&A session.

End of week summary will be emailed every weekend to help keep students stay on track, as well as solidify core concepts that have been taught during the week.

Course Materials

Required Materials

- Good internet connection
- Computer with speakers or headphones
- Willingness to work hard
- Come to each session with specific questions

Optional Materials

You can purchase a hard copy book if you like. I will send out a few recommendations for anyone that is interested. There will be several websites that I would like you to visit during the 8 weeks of class. I will provide site links and other details during each weekly session.
