Makers of the Original Star-Lock & ProTop

## PROTOP

### PREVENT DECAY IN POLE TOPS

*Eliminate accumulation of foreign matter*

*Prevent Decay*

*Moderate temperature extremes*

The ProTop is an innovative product designed to protect your investment in wood poles by shielding the top of the pole from environmental degradation due to moisture, bird roosting, and temperature changes.

The ProTop can be used alone or in conjunction with the Star-Lock for maximum pole top protection. The prime function of the ProTop is to reduce moisture change extremes in the center of the pole tops. These moisture changes result in checks that develop as wood shrink and expands. The engineered structure will also eliminate bird roosting and accumulation of foreign matter that is the major source of rot formation in end grain wood.

The ProTop is molded from black ABS ( acrylonitrile butadiene styrene) plastic at 3/32" for all dimensions. The black ABS will reduce heat extremes and provide UV protection for the pole top.
