

BREEZY PINES RV ESTATES

29859 OVERSEAS HWY

BIG PINE KEY, FL 33043

This letter is to inform each lot owner of upcoming dates for the water and sewer process.

July 7, 2019: All laterals must be complete before July 7, 2019. The old sewer will be capped. Steps for this process are: Once the waste water box has been green tagged by inspector, your sewer hose must be put on new sewer system. Our contractor will dig down a foot cut off old sewer cap. Contractor will glue on new cap. A picture will be taken with the date and lot number on top of cap. If you have not obtained a plumber we will still have to cut and cap your existing sewer line. As soon as your new water pedestal is hooked to the FKA meter on your lot you need to switch water hose to new water pedestal.

July 8, 2019: Haack will start the decommission of the treatment plant. This process can take 10 to 14 days.

The month of August the BPRV original main meter accounts: At this time the waste water treatment facility will be decommissioned. The existing (old park owned) main service will be shut down and removed. Service will no longer be available through the parks system. Water will only be available through the FKA system.

If you have not made arrangements with a plumber for the laterals to be installed on your lot this next step will happen. Once we are on FKA system your lot will not have access to water and sewer.

Thank you

BPRVE BOARD
