

## **Neville Binning**

Chairman Chartered Institute  
of Logistics and Transport,  
Australia

**Neville Binning** with a career that spans over 40 years predominantly in the realm of infrastructure. In particular, that related to transport. It is underpinned by my Civil Engineering background, MBA, PhD in strategic asset management and extensive professional network. I have thereby developed the capability to integrate all of the various disciplines necessary to solve complex challenges relating to infrastructure. In essence I apply an inclusive and holistic (systems based) approach to these so called 'wicked problems': [https://en.wikipedia.org/wiki/Wicked\\_problem](https://en.wikipedia.org/wiki/Wicked_problem) In doing so, I devise practical solutions that incorporate the interests of all key stakeholders – inclusive of the community and the public and private sectors.

In regard to transport related infrastructure my understanding has been considerably strengthened through my 20+ years of active involvement with the Chartered Institute of Logistics & Transport (CILT): [https://en.wikipedia.org/wiki/Chartered\\_Institute\\_of\\_Logistics\\_and\\_Transport](https://en.wikipedia.org/wiki/Chartered_Institute_of_Logistics_and_Transport) It is a global organisation that has members from the public, private, academic and research sectors. It serves members by promoting continuing professional development. This includes apprising them of pertinent issues relating to supply chains, logistics and all transport modes – for the full spectrum of economic development throughout the world.

Neville was successfully undertaken many and varied roles interacting with numerous people of diverse backgrounds in a broad range of locations and circumstances. I work in a collaborative and collegial manner - building mutual trust and establishing key alliances - motivating people to achieve required results.
