

## One-Click Entry

Revenue Control Systems has technology that allows customers to enter a facility with one click on their cell phone device. No need to type in a code to the keypad unit.

## Wi-Fi to Wiegand Reader

Revenue Control Systems U-FLASH access controllers have the optional capability to use our Wi-Fi to Wiegand Reader to access a facility without entering a code on the keypad unit.

The optional reader allows a customer to enter their code via a phone app as they drive up to the entry gate. The customer will simply save the application to their home screen on their device and enter their code. The app will save the customers passcode and all they have to do is press the 'Send Code' button in the app when they are near the keypad. There is no need to enter their code on the physical keypad. Our Wi-Fi Reader connects to the wiegand port of the U-FLASH controller board and will be placed inside the keypad housing. The faceplate of the unit will remain the same.
