

RCS Codice! App

Revenue Control Systems ON-SITE access controllers have the optional capability to use our Codice! Phone App to access a facility without entering a code on the keypad unit.

This allows a customer to enter their code via our phone app as they drive up to the gate. The customer will simply download the Codice! app to their device from either the Google Play Store or the Apple App Store. Each facility will have a required activation code to allow access for only that location. After the activation code has been entered, the customer will see the app home screen for the facility they are storing with. The app will let the customer enter their code and click send when they are in close proximity to the keypad unit, allowing the gate to open. There is no need to enter their code on the physical keypad. We are able to personalize each facility's app with buttons of your choice such as, allowing the customer to pay their rent, visit the facility website, and more all from the Codice! App.

- The RCS Codice! app is only compatible with RCS On-Site Keypad brand.
- User codes will be processed by the system as if they were typed into the actual keypad.
- Codes can be 1 to 10 digits long.
- Phone must allow location services for Codice! app
