RCS ON-SITE Access Control

Product highlights for Revenue Control Systems
online access system, ON-SITE.

UPDATE:

Our software can now manage multiple sites!

Have an off-site location as well as your main facility, with different tenants? KP-Control software can manage multiple sites with different databases from one screen. If your facility has a satellite location with a different set of users, it is simple to differentiate between sites with the 'multiple sites' function. Allowing you to choose what location a new user is added to. Print reports and make changes specific to that site, with our versatile KPControl software.

RCS ON-SITE Access Control

ON-SITE Access Control is Revenue Control Systems wired "online" access system, great for self-storage facilities, parking garages, or any gate application. This system is designed to be easy to use for managers as well as customers, and simple to service and install.

This system is loaded with many features making it the perfect solution to any self-storage or parking application. A few of the features include:

- Temporary 24 hour time zones
- Non-tenant codes
- Visitor codes
- Time and access zones
- Auto relay timers
- Timed and hard anti-passback
- Car counts (for lot full signs)

ON-SITE systems have an optional Wi-Fi feature that will allow customers to open the gate with an app on their phone. Simply save the app to your phone and when you are approaching the gate open the app

and your code is sent to the keypad. Your code will be processed and checked for valid entry. Each time you approach the gate your phone will automatically connect to the Wi-Fi being transmitted from the keypad. No need to roll down your window. Great way to:

- Incorporate the newest technology to your facility
- Differentiate your business from competition

This system has another app option, allowing customers to open the gate using their code from anywhere in the world. This is handy when a customer is expecting a moving truck delivery at your facility but will not be present. All they have to do is enter their code in the app and click send and the gate will open. This saves managers time by allowing the customer to be in control of their gate access from anywhere. Another great feature of this system is that managers are able to open the gate from their phone, anywhere in the world. They are also able to see real time keypad activity from their phone, allowing them to monitor their facility 24/7.

Our easy to use software, KPControl, allows you to make quick changes to system preferences, monitor real time transactions, and print reports all from the main screen. The software has the capability to interface with many popular self-storage management programs, or you can use KPControl to enter in your data directly. If you choose to use a management software data cannot be entered directly into KPControl, which eliminates data discrepancies.

Tips and Tricks: The technicians you call for technical support should provide free support immediately, or should call you back within 15 minutes, if not you should consider finding a new service provider. It is important to have a reliable service provider if your system is not operational. The faster your problem gets solved, the less time you have to spend worrying about a solution.

Reminder of Upcoming Events We Will Be Attending

- **November 13 + 14 - 2017 Southeastern Self Storage Convention & Trade Show in Charlotte NC**
