Application does not mean an individual will be assigned. Assignment is based on the station capabilities, needs of the net and also the number of current trainees.

Fill out all information requested. This information will help determine your assignment based on location, equipment and time to participate.

Only list equipment and capabilities that can be used on the phone patch net frequencies. Stations should be able to adequately use: PA, PB, PE, PF, PG, PH, and PI. Operation on other frequencies is a plus.

This application must be endorsed by the SMD. Forward it to your SMD. SMD please sign and agree and the forward to:

afn6p@afmarsphonepatch.net

Stations must be capable of operating 600 watts on primary (PE) and PB, PF, PG and PH. Steerable antenna(s) for 13 mHz and up, PB and PE at the same time, clean phone patch interface, US toll free phone calling capable within the US and participate more than the minimum time requirement. Attach photos of station and antennas.
