

# EXCALIBUR 7001

## INDUSTRIAL DETERGENT CONCENTRATE

### DESCRIPTION

Excalibur 7001 is an industrial grade versatile detergent cleaner. It contains no glycol ether solvents and is non-caustic thus making it safe to use on most hard surfaces. The unique emulsion characteristics of Excalibur 7001 allow it to work in areas normally requiring a caustic based or butyl based cleaner.

Specially designed to be used in food plants and food processing areas of all types, Excalibur 7001 is equally at home in an industrial plant, steam cleaner or in vehicle washing.

Controlled foam characteristics make Excalibur 7001 an excellent product to use through a foam gun applicator for cleaning vertical or inclined surfaces. The quick penetrating and emulsifying action breaks up oily and greasy soils almost like magic. Once emulsified the soil particles are suspended so as not to re-deposit. This allows for a 100% film and soil free surface after rinsing.

### Excalibur 7001 offers the following advantages:

- **Concentrated Liquid** – contains double the active ingredients of many other industrial cleaners. This provided a very economical use-dilution.
- **Non-caustic** – contains no caustic and is therefore safe on aluminium and other no-ferrous metals. Safer for employees to handle too!
- **Non-butyl** – Many cleaners depend on butyl solvent to obtain cleaning action. Butyl is very odourous especially when used at high temperatures. It is also becoming an increasing concern to regulatory and industrial personnel for safety reasons.
- **Soap Free** – May be used with any water source – soft or hard. Will not clog coils in steam cleaning or hot water pressure washers.
- **Built-in Corrosion Inhibitors** – contains ingredients to give corrosive protection to metallic parts being cleaned as well as internal parts of pressure washer or product handling equipment.
- **Versatile** – May be used in hot tank as a soak cleaner, steam cleaner, pressure wash, automatic floor scrubber or in normal cleaning.
