

EXCALIBUR 4000

BIODEGRADABLE CITRUS CLEANER/DEGREASER

Designed for Pressure Washer Applications

DESCRIPTION:

Excalibur 4000 is a highly concentrated industrial degreaser designed for cold water pressure wash applications in cleaning of heavy equipment and ferrous (iron) metal surfaces. Removes oils, greases, smoke stains, waxes, tar and inks. Not for use on painted road vehicle surfaces. It contains no glycol ether solvents and is non-caustic thus making it safe to use on most hard surfaces.

Excalibur 4000 is designed to go to work wherever greasy, oily, organic-based soils exist. It's great to for ink too! Use it to clean tile, concrete, marble and terrazzo floors or any other hard surface not affected by water. Cleans and deodorizes typewriters, vending machines, garbage and trash containers, machinery, tools, etc.

Excalibur 4000 offers the following advantages:

- **NON-BUTYL** - Does not contain "butyl" or other glycol ether type solvents yet penetrates better than butyl for grease and inks.
- **LOW VOC** - Increased concern for Volatile Organic Compounds in work place areas has meant an increased concern for solvent cleaners. Excalibur 4000 contains less than 5% VOC and low evaporation rate meaning improved air quality.
- **BIODEGRADABLE** - The use of biodegradable citrus derivative means a more environmentally safe product.
- **PLEASANT ODOUR** - Many cleaners use perfumes or fragrances to mask the powerful solvent odours that people find objectionable. Excalibur 4000 uses no such perfumes but rather relies on the natural "orange" aroma of the citrus additive to provide a fresh clean smell after use.
- **VERSATILE** - Excalibur 4000 may be used in hot tank as a soak cleaner, steam cleaner, pressure wash, automatic floor scrubber or in normal cleaning.
