

EXCALIBUR ELIMINATOR

POWDERED VEHICLE WASH

DESCRIPTION:

A highly effective, powdered detergent formulated to efficiently remove a wide range of soils including; road film from automobiles, trucks, trailers, buses and cars; carbon deposits from truck exhausts on trailer fronts and sides and bug residue from vehicle fronts. As well it can be used to remove many of the more stubborn grease and oil deposits on engines, transmissions, undercarriages and oilleaks from leaky hydraulic lines. "Eliminator Powdered Vehicle Wash" - When mixed at the proper ratio and applied in accordance with the directions will remove most soils without the need for brushing.

Due to the wide variance of water conditions, it is difficult to formulate a single product that will perform equally well in all applications Excalibur Eliminator contains a synergistic blend of alkaline builders and detergents which dilute with water to produce a versatile cleaning solution. Tough road film deposits are removed without the use of caustic or solvents. Excalibur Eliminator exhibits exceptional rinsing and leaves the vehicle surface spotless. In addition to being an excellent "brushless" detergent through pressure wash equipment, Excalibur Eliminator works equally well as a brush wash through automatic or manual wash equipment.

When used through pressure equipment, it is recommended to work with units that can produce a minimum of 800 lbs pressure for the rinse cycle. Best cleaning will be obtained when detergent and rinse are both applied at high pressures however, low pressure detergent application followed by adequate penetration time and a high pressure rinse will normally produce excellent results. When hot water is used, it should be possible to reduce the concentration of the cleaner to one half or one third of the level required with cold water.

Excalibur Eliminator offers the following advantages:

CONCENTRATED POWDER – contains no fillers. Product is 100% active

RAPID DISSOLVING – no insoluble residue or lumps to plug equipment

CHELATED – produces good cleaning and rinsing even under hard water conditions

NON-CAUSTIC – effective cleaning without the use of caustic ingredients which can produce permanent and damaging effects on paint or skin

FREE RINSING – detergent residue is rapidly and freely rinsed away even when only a minimum clear water rinse is available.
