Concrete Crack Repair

with the

 **EMECOLE**
Crack Repair System

and your
CONTRACTOR

ILLIANA BASEMENT WATERPROOFING

the solution to permanently
repairing cracks in your poured
concrete basement walls.

The Emecole Crack Repair System contains a very thin urethane which travels all the way through the wall. Once in the wall and beyond, it expands and plugs. The resulting foam barrier permanently stops the flow of water. The benefits of the expanding foam include:

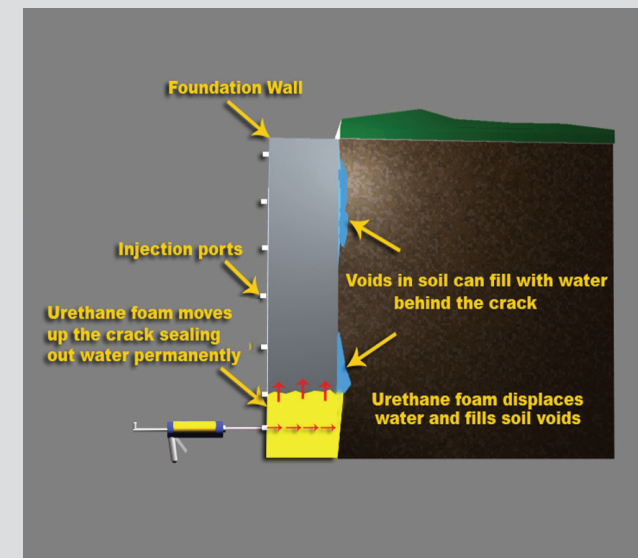

- Filling of the wall completely, not just on the surface.
- Very fine cracks are plugged.
- Any voids behind the wall are also filled, adding additional protection.
- Emecole's foam is flexible, adapting to natural movement of your wall.
- Emecole's foam will not shrink over time, thus providing permanent protection.

Emecole Crack Repair System works because proper basement repair requires filling of the crack completely.

Repairs done only on the surface will crack again.

Give yourself peace of mind with

ILLIANA BASEMENT WATERPROOFING

Repairing cracks is an essential
step before finishing off your
basement.
