

# Quick Response Keeps Client in Production

On Wednesday, a millwork shop with over a century old tradition of quality had a devastating fire in their dust collector...

On **Friday**, they ordered a new 20,000 CFM dust collector from **MAC Equipment Co.** through their local representative, **Alston Equipment Company.**

The unit was guaranteed to be installed and running by the end of the very **next weekend.**

Most companies would say this is impossible **MAC Equipment** said, "We can do it".

On the following Thursday, the new unit arrived by special carrier.

Alston Equipment and MAC called on **Reed Industrial Systems, Inc.**

to insure the installation was done on time, and done right.

Working around the clock, the Reed Industrial team

efficiently engineered the installation of the new dust collection system.

Sunday night at 7 PM, the new dust collector was running in full operation, which kept this high production millwork shop at the peak of performance and profitability.
