755th Contact, Tuesday, October 20, 2020, 1.54 a.m.

Ptaah Eduard, my friend, I greet you, you must have been lying down at that moment. This is unpleasant for me, but my coming here is important.

Billy Grüezi, my friend. Welcome Ptaah, also at this time. Apparently your coming is really important.

Ptaah Yes, you know since February when I told you that the Corona situation starts to get very precarious from the middle of the year, especially from the end of September when the second wave of the epidemic starts as a worldwide conflagration. I mentioned this again on September 23rd, and the fact that it could come as far as it has come and will continue to come, that the corona epidemic can rage worldwide, is undoubtedly due to the fault of all those state leaders who, as a result of their incompetence, have completely irresponsibly failed to take the necessary measures, precautions and other measures to combat the epidemic, who are still neglecting this and who continue to do the wrong thing. In this way alone, we can speak of an absolute guilt of those state leaders who, as the main leaders in the front line, are responsible for containing, fighting and resolving the Corona pandemic, but are absolutely incapable of doing the right thing and fulfilling it. And this inability to lead is an irresponsible disregard for and threat to the health security of peoples worldwide, because according to our elaborate and precise investigations and findings, there is not a single state on earth that would be led in an effective, overall responsible manner for the well-being of the peoples by state leadership authorities appointed to the top of government. Our findings show that only a few states have extremely few people in positions of state leadership who do justice to their tasks or at least for the most part do the right thing, although these people usually play only secondary roles in state leadership. This is so because their good efforts are cancelled out by the unjust in the leadership of the state, who try to conceal their inability to do the right thing with stupid demands and banal speeches.

Billy I know all that, Ptaah. But to tell me only this, you are certainly not here now, are you? Something else leads you here, I suppose, or am I wrong?

Ptaah Right, I'm here to explain that it is in keeping with the need to go back to the first behaviors and safety precautions that you took after our advice at the beginning of the year regarding the open outbreak of Corona disease. As at the beginning of the first precautionary behaviour against the Corona disease, it is repeatedly necessary to keep yourselves informed on a daily basis about the course of the pandemic and to focus on all necessary precautionary measures against the Corona virus. I would like to mention the following points, which should be observed, as well as other recommendations which should necessarily be followed, such as point 8, which is currently of particular importance for ... in order to ensure the continued existence of your own health and that of all those living in the Center, which you urgently need to decide upon in order to ensure a reasonable and justified solution for the benefit and safety of all Center residents. Such a solution

can, in the event of a lack of understanding etc. – which, according to our observations over the last few weeks, can unfortunately be assumed – possibly be a change to an out-of-home or out-of-center apartment, which is not to be decided by the KG as a whole, but by the center residents as directly affected persons, which should be decided and implemented by next Friday at the latest. The most urgent necessities are given therein:

1. Wearing of suitable, reusable and best-safe respirator masks of at least quality FFP2 or FFP3 – with or without breathing valve – should be an absolute must when dealing with strangers, both outdoors and in buildings and public transport etc. – whereby public transport should be avoided if possible.
2. therapy appointments, visits to doctors and dentists, etc., which are not of an urgent or vital nature, should be postponed until further notice and should only be noticed again when the risk of corona infection has been reduced to a level that offers a certain degree of security of non-infection.
3. a thorough care of the protective masks should be strengthened during longer use by a temporary disinfection about every hour with regard to a short and light outside momentary spraying with at least a 70% alcohol solution.
4. a respirator mask must be washed thoroughly after each prolonged use – at the latest after daily use – and then additionally disinfected lightly with a suitable 70% alcohol solution.
5. In everyday life it is crucial that an appropriate distance to other people outside the healthy circle of the family or residents is maintained in addition to the wearing of respirators. This distance should be determined according to the environment, wind conditions and wind direction. In calm weather, a distance of 150 cm from person to person may be sufficient to prevent exposure to expiratory droplets and aerosols from another person through speech and to prevent transmission of these droplets and aerosols by the other person. If, however, there are wind conditions, then a distance of 2 meters or more from person to person must be observed, because expiratory droplets and aerosols are blown away by the wind at greater distances and can be inhaled by other people.
6. in rooms, etc., which are used for contact with strangers, such as public buildings, spraying rooms or work rooms, etc., transparent glass or plastic partitions should be mandatory for speech.
7. all necessary rules of hygiene should be observed and worn according to the masks used in everyday life, whereby it should be noted that the rules of hygiene do not only consist of hand disinfection, but also in the care of the entire body, clothing and the use of objects, handles and apparatus etc. which require disinfection, for which however no chemical agents whatsoever should be used, but an alcohol solution of at least 70 percent.
8. the risk of infection mainly exists in closed rooms, and consequently also in working areas where many people have to work in insufficient distance from each other, such as slaughterhouses, vegetable, goods and food processing plants, schools of all kinds, offices, departments and sales outlets, whereas there is a need to reduce the number of working personnel in such a way that the distance from person to person and workplace to workplace is increased to 2 meters. Work activities, such as in cramped offices and other premises, should be eliminated and the entire work potential should be transformed to home office or teleworking or homeworking, which is a flexible

form of work, where the work is carried out entirely or partially in the private sphere and environment. Failure to take such necessary safety measures should not be allowed to occur for any personal or business reasons if this would endanger the personal health of the employee or other people, which would be irresponsible and would be severely punished if an infection were to occur.

9. Our findings regarding corona diseases are that the majority of people suffering from the corona virus are affected by only mild to moderate symptoms and recover without requiring special medical treatment. However, any such disease is not harmless, as is mistakenly assumed by the sick and convalescents as well as by the medical profession, because in any case, virus residues remain in the human organism, mostly in pulse form, which, however, cannot be detected due to the very inadequate terrestrial medical possibilities. These residues remain in the organism for the rest of one's life and will inevitably be the cause of various ailments and diseases over the course of time and years of life, which in addition will not always lead to exact diagnoses and knowledge. This, just as recovery from a corona infection cannot guarantee immunity and the prevention of a further corona disease, whereby a further disease can be more degenerative than the first one.

10. The corona virus, which is trivialized as COVID-19, is mainly transmitted infectiously by expiratory droplets and exhalation aerosols, which can already result from speaking and exhaling, because speaking droplets and breathing aerosols are released and inhaled again by other people, thus contaminating them. Furthermore, an infection is mainly caused by the typical coughing and sneezing that is typical of the Corona virus, which causes infectious breath aerosols to be exhaled and expiratory droplets to be released, which are then inevitably inhaled by other people and consequently infected if, on the one hand, they are not equipped with respiratory masks and do not keep the important distance of at least 1.5 to 2 meters – when there is no wind – from person to person.

11. it is important to note that the expiratory droplets, which are infected by the corona, do not float in the air for a long time according to their weight, but sink relatively quickly and settle on clothes, skin, objects, door openers and other surfaces of objects as well as on the floor and are transmitted to humans when touched, thus infecting them. This, while the almost weightless exhalation aerosols float in the air for a long time and spread rapidly according to wind conditions and can therefore be inhaled by other people if they are too close and not respiratory protected.

12. Infection can therefore occur on the one hand when a person is in close proximity to another person who is infected by the corona virus and whose expiratory droplets and aerosols are inhaled, just as infection can also occur when touching surfaces contaminated with the corona virus. It is mistaken to assume, as so-called medical <specialists> irresponsibly proclaim, that after touching with hands and fingers objects contaminated with the virus, etc., the eyes, nose or mouth should not be touched because this is the only way an infection occurs. The effective correctness is that the corona virus enters the organism not only in this way and thus not only through the eyes, nose and mouth, but also through the pores of the skin, which are tiny openings in the skin that form the excretory ducts of the sebaceous and sweat glands, through which sebum and sweat are secreted onto the epithelial surface. This means that an infection can already occur through contact with objects contaminated with the corona virus, as is also the case when the skin comes into contact with infected persons or their clothing contaminated by the virus.

13. the use of respiratory masks with FFP2 or FFP3 quality masks should be an absolute and unavoidable obligation in simple public dealings with people, as well as in public transport of all kinds, including airplanes, ships and trains, etc., whereby public transport should only be used if absolutely necessary.

14. restaurants, hotels and stores of all kinds should only be allowed to operate under the strictest health safety measures, whereby everything should be set up in such a way that there should be a distance of – depending on the case – 1.5 to 2 meters from person to person.

15. a general mask obligation – only FFP2 and FFP3 quality masks – should in any case be mandatory wherever there is a need for them. Suitable FFP1 masks should only be used for short periods of time in public places where long distances from person to person can be guaranteed.

16. a breathing mask should also be worn if there is a distance of 1.5 to 2 meters, as well as purpose-built barriers, distance restrictions and speech partitions should be observed and used.

17. festivities and parties are also to be avoided, such as vacations, entertainment, celebrations and other meetings etc., where all necessary requirements for health safety and prevention of infection cannot be guaranteed.

18. curfews or lockdowns should be imposed and implemented immediately, as well as overall economic restrictions as soon as a lockdown has to be imposed, and special regulations should be enacted and implemented with regard to monetary transactions and corresponding time-related decrees.

19. In the event of a lockdown, only vital businesses and industries etc. shall be maintained under the strictest security conditions in a moderate framework in order to guarantee all means of subsistence, such as food, electricity, medicines etc., as well as the entire health system, clinics and medical practices etc.

The corona virus epidemic – which is trivialized and misleadingly called COVID-19, thereby causing false views and ideas in certain uneducated sections of the population and leading them to delusional and delusional beliefs and conspiracy theories – is an infectious disease caused by a virus created out of vengeance, but which has been prevented by <specialists> in virology etc. This is not recognized but denied and is called the <newly discovered coronavirus> from the <animal world>. This claim is alien to reality, because it is not true that the corona pandemic was caused by a sick animal. In contrast to this untrue claim, the effective truth is that in the 1970s, as a result of a man's hatred of the government in the U.S., a conspiracy was plotted in China together with a person hostile to the U.S. and laboratory work was carried out to create a plague in connection with a certain species of bats to spread it in the U.S. and take revenge. However, the reason for this is now unknown, as all those involved in the case have already died. However, the research work begun in the 1970s was continued until the beginning of January 2019 and the corona virus, which is now rampant worldwide, emerged from it. Since then, since January 2019, the virus has claimed many victims who were not recognized as corona-infected and corona-dead, but as people who died of the flu, before the disease was openly recognized and has since driven the world and its humanity into fear, terror and multiple infections with millions of deaths.

As far as the effects of the Corona epidemic are concerned, the two of us have talked a lot about it over the last months and have also clarified a lot of things, which you have published on the Internet through your efforts according to our findings, whereby this information has been taken up by virologists, epidemiologists and physicians etc. and made public as their <own findings>.

Billy Which of course is vehemently denied.

Ptaah What can't be any other way, and with this the essential is said and explained, but what I want to recommend especially for all people on earth is that at the present time and up to a certain time in the future, the wearing of respirators in everyday life and in contact with other people corresponds to an urgent and unavoidable necessity for health maintenance and safety. This on the one hand, while on the other hand the conspiracy theorists and their followers, who are addicted to the double bean straw stupidity, dig their own grave in their stupidity through their delusion.

Billy Yes, that is what I always say, but unfortunately stupidity and dumbness know no bounds, nor do the insensitivity and irrationality of the brain-damaged and dumb-as-shit part of the population, which has fallen for the moronic conspiracy theorists and adheres to them. And that many of these firecrackers also contract infections and death, they unfortunately only experience this when they are caught hopelessly by the epidemic and it is too late to change their mind and they can look at the radishes from below when they are buried 1.80 cm into the ground.

Just like this stupid and brazen part of the population and the conspiracy theorists, all those responsible but irresponsible rulers around the world who are not able to assess the corona situation correctly and therefore cannot elaborate the right measures and cannot implement them, consequently the necessary and right things are not or only negligently done to stop the corona epidemic. Unfortunately, this is not only the case in other countries worldwide, but also here in Switzerland.

Ptaah Unfortunately, this is indeed the case, because I saw the speeches of a man and a woman during a tele-vision broadcast and was embarrassed by their ridiculous remarks and ridiculous behavior.

Billy I can understand, because I had a similar experience, and the two, the woman and the man, were federal councillors.

Ptaah I know that. But now, Eduard, dear friend, I have to do my duty again, and you should go to rest. Farewell and goodbye.

Billy Goodbye, and also goodbye, as well as thank you for all your explanations and statements.
