FW: Bawlf pricing

From : Allan Yamashita <allan.yamashita@focus.ca> Mon, Aug 26, 2013 06:34 AM
Subject : FW: Bawlf pricing 1 attachment
To : village manager <villagemanager@bawlf.com>

Case

Attached is the pricing that I received this morning.

The price is in align with our cost estimate. The pricing from Jos Concrete was much higher.

As discussed, previously. Recommend proceeding with Jos Concrete for Hanson. \$59,480 + GST

Based on the price submitted by Mike. Recommend proceeding on with Daysland backhoe for the stormsewer on Molstad. \$33,614 + GST

Also, set aside 10% for each of the above, as contingency. There may be some unforeseen work on Molstad that I did not pick up based on my visual observation.

Allan

Subject: Bawlf pricing

Hi Allan,

I apologize for quote delay, my pricing for Bawlf is as follows:

Item 1a: supply and install 70M-600mm @ \$197.62 = \$ 13,833.40 Item 1b: supply and install 40M-600mm @ \$247.03 = \$ 9,881.00 Item 2: removal of existing culvert @ \$250.00 = \$ 1000.00 Item 3: clay borrow to fill ditches @ \$ 23.00 = \$ 5,980.00 Item 4: catch basins 3 @ \$ 890.00 = \$ 2,670.00 Item 5: tie-in to existing 600mm @ \$ 250.00

Total quote: \$ 33,614.40 + gst

My anticipated start date would be Oct 1/2013 and would require appox 5 days on site to complete the work.

Case

The price for the stormsewer was high. I will give you a call.

We need to encourage Daysland Backhoe and NuEdge to submit. Perhaps Jos concrete on the concrete swale.

FW: Geotechnical - MaCrae St.

From : Allan Yamashita <allan.yamashita@focus.ca> Thu, Aug 01, 2013 07:34 AM
Subject : FW: Geotechnical - MaCrae St. 2 attachments
To : village manager <villagemanager@bawlf.com>
Cc : Raed Tatary <Raed.Tatary@focus.ca>

Case

I found the attached report that was prepared three years ago. Need to reassess the approach to cold mix on the roadways. The report focused on MaCrae St. Likely the same conditions persist on Sanden as well.

The recommended roadways structure is noted on page 9 for cold mix or hot mix surface.

We had review the costs for MaCrae St 3 years ago. At that the time, the costs are noted in the October 2012 report. The cost for MaCrae alone was \$500,00 from Railway Ave to Martin Ave and if the recommendations of the geotechnical report are followed.

We could proceed, however based on the reports from 3 years ago, there will likely be moved on the roadways and over time, there could be road failures similar to the section of cold mix on Sanden St from Alberta Avenue to Molstad.

Possibly look to mixing oil with the existing gravel, reworking from time to time with the addition of new oil.

I think that there is significant risk proceeding with a cold mix or hot mix surface.

When you return back to the office, we can discuss; and decide whether you wish to pursue the oiling option.

Subject: Geotechnical - MaCrae St.

Lynn

Attached is the geotechnical report for your review. My comments as follows:

- 10 testholes. Spacing varied from 40 to 90 m. Average 60 l.m. between testholes.
- Variation in gravel thickness from 50 to 450 mm, average depth 150 mm.
- Mostly clay fill under the roadway with organic clay encountered as noted in the report. The intent is to remove the organic clay,
- Clay till also encountered. A good construction material.
- Water table at two locations, 1.0 and 1.35 m below ground.
- Comments being forwarded to Scott/JR Paine which you will be copied.
- As noted the intent, page 6, the existing road structure will need to be removed to construct the new road structure. At the time of construction, if any soft spots or organic material is uncovered, the material is to be removed and replaced with suitable material and as per a geotechnical recommendation.
- The clay is very moist and will require drying/reworking. As a result, dry and warmer weather is required for construction of the roadway. Construction in the fall or wet weather will result in extra subgrade work. If reconstruction of the roadway is contemplated this year, then design and tendering needs to be scheduled accordingly. If construction is scheduled for 2011, then no problem.
- It is expected that there are pockets of poor subgrade that will require over excavation. The geotechnical investigation indicates the same. The contract should include for a volume for over excavation.
- We will prepare a order of magnitude cost for MaCrae street once the geotechnical report is finalized.

Please review and offer your comments on the report.

I am out of the office on vacation and back August 9th.

Allan

Engineering - Geomatics - Planning

October 18, 2010

File No.: 020100727

Lynn Horbasenko
Village of Bawlf
Box 40
Bawlf, Alberta
T0B 0J0

Dear Ms. Horbasenko:

RE: MACRAE STREET ENGINEERING REVIEW

Further to the above and our proposal earlier this year, we have the following to report

Water Supply System

- **Distribution System**

- In discussion with the Public Work Superintendent, the distribution system is constructed mostly of Asbestos Cement. For McCrae Street, the water distribution system is considered to be in satisfactory condition given its age with some minor leakage occurring further north in the distribution system, east of McCrae Street on Martin Avenue.
- The existing system consists of a grid of 150 mm watermain with a 200 mm from the existing water treatment plant west along Molstad Ave for approximately 2 blocks. The 150 mm distribution system meets Alberta Environment's requirement for a minimum 150 mm piping size.
- The distribution system is constructed of Asbestos Cement and from our understanding no cast iron pipe, which is normally a cause for concern because of deterioration.
- The distribution system layout in general is good and can be improved by extending watermain from McCrae Street, west along Alberta Avenue to King Street to improve fire flow in the distribution system.
- Hydrant spacing at each of respective blocks generally follows good engineering practice. Hydrant spacing for well developed systems have spacing of 150 m in residential areas and measured along the curb.
- Valve spacing is very good, assuming that they are operable, to isolate the respective hydrants and for the purpose of isolating problematic pipes for repair and maintenance purposes. For long term maintenance, subject to parts being available, the problematic valves can be reconditioned with new packing and new nuts/bolts for the bonnet. If parts are not available, problematic valves will need to be replaced

- For MaCrae Street and based on our discussion with the Public Work Superintendent and water use and without the carrying out a leakage test, we surmise that the piping system is in relatively good condition.

- **Water Use (Table 1)**

- Attached is a table based on the information received from Village Administration on water use for 2006, 2007 and 2008. Average water use during the period was 106 imperial gallons per capita, which is excellent given the services are not metered.
- The implementation of a metering system in the future is beneficial from the perspective of a user pay approach, for water conservation and for positioning relative to funding for water treatment plant upgrades. The province encourages the use of water meters and reduces funding by 10% in the absence of water metering and in instances where water use is high. At 106 igpcd averaged for the 3 years, we rationalize that water leakage does not appear to be a problem and expect that the integrity of the watermain is relatively good and in this respect, that other than dealing with problematic leakages, that no repairs to the watermain under MaCrae are expected. We think that there would not be a reduction in the percent funded for eligible water supply funded projects given the low water use, however this need to be confirmed with the province.

- **Water Treatment Plant**

- A separate report is presented separately for the water treatment plant based on a site visit to the plant in September with recommendations for improvements along with cost estimates for two alternatives.
- Note: We reviewed the water quality records with respect to the Canadian Drinking water standards and are reporting the following:
 - Chlorine residual entering the distribution system averages 0.86 mg/l. Minimum required is 0.10 mg/l. Based on the records the concentration entering the distribution system meets the guidelines.
 - Iron and Manganese concentrations are within acceptable limits.

Sanitary Sewer – MaCrae Street

CCTV Report

- We reviewed the two previous CCTV (Closed Circuit Television) for MaCrae Street to determine the condition of the pipe with a report on our review the previous CCTV that was carried out. (**Report 1**) Unfortunately the quality of the video was poor and could not be used with confidence; as a result we recommended that a new CCTV be carried out. The Village of Bawlf, tendered a new CCTV contract, the report was prepared and submitted to the Village. Village Administration has a copy of the report.
- Report from IVIS for CCTV King, MaCrae and Sanden Streets.

- Attached sketch (**Plan 1**) from IVIS showing the sections of CCTV that were carried out along King, MaCrae and Sanden Streets.
- Attached is a copy of the spreadsheet (**Table 2**) provided by IVIS on the respective costs based on their proposal for remediating the sanitary sewer mains for King St. MaCrae St and Sanden Street. It was recommended at the time of the CCTV tender, that the Village should CCTV those streets that may be improved in the near future to identify the condition of the sanitary sewer under the roadways.
- We met with IVIS to discuss the report and were advised that the repairs to the sanitary sewer, copy of email attached (**Email 1**), can be repaired by relining. The relining can additionally be used at locations where pipes are misaligned according to IVIS. Relining according to IVIS can be undertaken for King St. MaCrae St and Sanden St. without excavating to repair the sanitary sewer. We did not however receive confirmation to our September 14th email.
- IVIS identified costs for relining the service connections, a short distance into the service, identified as 'shorty' and a longer relining service repair identified as 'PL'.
- Brett/IVIS indicated that the milling cost is included in the unit price for full relining.
- Recommend that for milling, that quotes/tenders be received for the 3 roadways and not only MaCrae st. The milling could be undertaken early in 2011.
- Full relining can be undertaken sometime when funding is available. Milling of the pipe and spot repairs should take care of the immediate issues and improve flow in the collection system.

Geotechnical Investigation

In summary the geotechnical report, commented as follows:

- 10 testholes spaced along MaCrae Street.
- Gravel thickness varied from 50 to 450 mm with an average depth of 150mm
- Clay below the gravel surface.
- Organic clay was encountered in a number of testholes and which needs to be removed when encountered during construction.
- Clay till, a good construction material was encountered, at slightly above optimum moisture content.
- Groundwater was observed at two locations at depths of 1.0 and 1.35 m
- Recommendations from the geotechnical investigation:
 - The existing gravel and clays fills are to be removed to accommodate the proposed road structure, hot mix or cold mix.

- Judgment as to the acceptability of the clay material for re-use needs to be evaluated during the construction because of the variability of organic material that may be encountered in the clay. (Note: Provisional sums to address the variability of material should be included in the tender schedule)
- High moisture will be encountered which will be sensitive to mechanical disturbance (Note: May require subcut excavation, cement stabilization, additional granular subbase, geotextile material and /or drying)
- Subgrade compaction for the initial 150 mm to 100 % Standard Proctor Density.
- Wick drains be installed (Note: To be connected to the sanitary sewer or ditches, whichever is most accessible)
- Based on the geotechnical investigation, Hot Mix surface or Cold Mix structures are acceptable alternatives:
 - Minor collector or high traffic roadway on MaCrae St. (Molstad to Railway Ave) to have more of a structure that the local residential (North of Molstad Ave) on MaCrae St.
 - The granular base for the cold mix structure is deeper because there is no inherent strength with the cold mix and the granular base is thicker.
 - Hot Mix or Cold Mix are alternatives, with Hot Mix at a slightly lesser cost.

Road Construction along with Sanitary Sewer Relining Costs

In summary and for the purposes of budgeting for improvements to MaCrae Street for road improvements for each of the respective sections and including sanitary sewer relining cost, we have the following to report:

- Cost Estimates
 - Costs for each block along MaCrae Street:
 - For the following respective sections (Plan 2) on MaCrae St:
 - Section 1 Railway Avenue to Alberta Avenue
 - Section 2 Alberta Avenue to Molstad Avenue
 - Section 3 Molstad Avenue to Martin Avenue
 - Section 4 Martin Ave to end of roadway

- Attached summary (**Table 3**) that summarizes cost for road improvements and sanitary relining costs for the various road sections.
- Road Improvements for hot mix and cold mix alternatives includes 10% for Engineering, 10% contingency and 3% for geotechnical testing.
- Sanitary Milling to remove encrustation from the sanitary sewer along and includes for 10% contingency.
- Full reline cost from IVIS's report for each section along MaCrae St and includes 10% contingency.
- T line 'shorty' for the service reline cost for each section along MaCrae St and includes 10% contingency.
- Road construction cost alternatives for each of Hot Mix and Cold Mix that include for road cost and sanitary milling; road construction and full reline, and road construction with reline and "shorty" service relining.
- The order of magnitude cost for hot mix improvements to MaCrae Street excluding sanitary relining is \$584,000 with cold mix at a slightly higher cost.
- We have provided a number of construction scenarios should the Village of Bawlf elect to proceed with improvements to MaCrae Street over a number of years.

Scheduling of Improvements

Based on our review, we suggest that the Village of Bawlf consider the following:

- Undertake milling of the sanitary sewer for MaCrae Street, King Street and Sanden Street as a single contract. IVIS identified a cost of \$25,400 to undertake the milling. Recommend that the municipality tender the work when it is decided to proceed. The milling should be undertaken before road improvements are carried out in the event that the milling uncovers issues that are not known at present.
- Schedule relining of the sanitary sewer for King, MaCrae and Sanden Streets when funding permits. The estimated total cost as estimated is \$134,000 that includes for 10% contingency. No engineering cost has been included.
- Undertake relining of the services for MaCrae, using 'shorty' when relining is undertaken. Total cost is \$134,200, includes 10% contingency.
- Tender improvements early in 2011 to take advantage of typically lower tendered costs early in the new year. Requires that detailed design, depending on the scope of work, be prepared in November and December 2010.

If there are questions, we would be please to respond.

Sincerely,

FOCUS CORPORATION

Allan Yamashita, P. Eng.
Senior Project Manager

FOCUS INTEC

Summary of Video Review

05 May, 2010

Bawlf – MaCrae Street, Bawlf, AB

FILE #: 020100727

Attention Project Manager: Allan Yamashita

RE: Sanitary (existing clay tile pipe) VIDEO DATED: 17-06-08

By: Video Vac (?)

Item Description

1. Initial observations \ condition of video picture: Majority of video is not clear; all pipe inspections had the video camera off-centre towards the bottom of pipe. At times when the camera was submersed in water within the pipe, one can only verify the water level was above probably 35% capacity. A few sections of lines were not properly flushed clean or had solid sediment and in a few cases debris imbedded in sediment.
The video inspection for this stage came in a vhs tape and a two dvd package (which was a copy of the vhs tape content). No plan referencing manhole numbers used in this video inspection was available. Manhole numbering in video does not coincide with those on 1964 nor 1984 to 1987 plan drawings. Irrelevant numbering of manholes in video indicates probable missing video inspected sections. All runs were not completed, however some referred to a "match point", which were not verifiable in the video. Most of the video referenced manholes at intersection of MaCrae St \ Martin Ave. This adds more doubt to the actual locations of each video run.

General summary:

a) This video inspection is unacceptable for verifying the condition of existing (various) sanitary lines within Bawlf, for municipality representatives' recommendation to replace existing clay tile pipe or leave any sections remain. Some of the deficient conditions observed may have existed since original installation, and yet have provided sanitary drainage service to date.

b) The above is based on the vhs tape provided for review. A hand written detailed summary can be typed up for you and your client(s) reference, however being that the manhole referencing and consistently incomplete runs, it would probably not be advantageous.

c) It would be advantageous to have the sanitary lines under the priority location "MaCrae Street" revideo inspected properly, and any lines under roadways which may be rehabilitated within the next five years. The referencing of a known plan drawing, referring to existing manhole numbers, relevant street intersections, individual lot/block services is required. Quality of video picture, location of camera lense in relation to center line of pipe, pipe diameter, pipe material description (include material of recently repaired sections), articulating the camera head into each service and close-up shots of probable deficiencies would be recommended. A text copy of the video, which would include pictures and notation of observations, should accompany a new video inspection. It would also be recommended to implement a video inspection company that can inspect the existing clay tile pipe lines which have calcite encrustations at joints and service orifices and vertically mis-aligned pipe joints.

d) The supplied vhs tape, (with the 2-dvd package), have been returned along with this summary.

Brett

This email also confirms that based on our conversation that all the repairs to the sanitary sewer under MaCrae Street can be repaired by relining. This includes the misaligned pipe, such that relining will improve the flow across the existing misaligned pipe and that excavation and repair are not required. I met with Lynne on Thursday and indicated the same. If repair by excavation is required, please advise, otherwise we have advised the Village that excavation will not be required.

I met with Lynn and she had not as yet received a copy of the CCTV report. I am arranging to forward my copy of the report and request that the copy intended for the Village be forwarded to me.

Notes:

- Engineering Fee at 10% (Budget)
- Contingency Fee at 10% (Budget)
- Geotechnical Testing at 3% (Budget)

Notes:

- Consider a section or combination of sections for Hot Mix subject to the ability of the Municipality to fund the work.
- Proceed with milling of the Sanitary sewer for MacCrae St. and the other roadways as funding permits. Can be undertaken after street improvement.
- Full Reline can be undertaken after and subject to financing. (Milling included in cost)
- Reline service connections with Full Reline (Shorty repair)
- One mobilization for all milling on 3 roadways
- Assume one mobilization, If Separate add an additional \$5000 per mobilization

Dear Sir:

Re: Geotechnical Investigation
Proposed MaCrae Street Upgrading
Bawlf, Alberta

DRAFT

1.0 INTRODUCTION

This report presents the results of the subsurface investigation made on the above noted location in Bawlf, Alberta. The objective of the investigation was to make recommendations for the design and construction for the existing roadway. Authorization to proceed was received from Allan Yamashita of Focus Corporation in May 2010. Fieldwork for the project was completed in June 2010.

2.0 SITE AND PROJECT DESCRIPTION

The above noted roadway is approximately 600 metres in length. The south roadway limit is Railway Avenue, while the north limit is approximately 100 metres north of Martin Avenue. The project scope was outlined on a plan provided by Focus Corporation. One preliminary site meeting between The Village of Bawlf (Rod Blatz and Lynn Horbasenko) and J.R. Paine and Associates Ltd. (Scott MacFarlane) was completed on May 31, 2010 to outline scope of work and locate underground utilities within the roadway.

Based on the RFP and discussions with The Village of Bawlf, it is understood that the roadway in question is to be upgraded to incorporate a hot/cold mix asphalt structure. At the time of drilling the roadway had gravel surface with curb and gutter from Railway Avenue to Martin Avenue. The portion of the roadway north of Martin Avenue was a rural profile with ditches along both sides.

It is also understood that light to moderate truck traffic can be expected at the south limit of the site due to the existing UFA Cardlock Station at the north west corner of Railway Avenue and MaCrae Street. Light school bus traffic can also be expected south of Molstad Avenue due to the nearby school. The purpose of the investigation was to determine the appropriate method for upgrading/reconstructing the existing roadway. It is understood that no underground utility installation is planned for the area and grades with match existing curb and gutter.

3.0 FIELD INVESTIGATION

The soils investigation for this project was undertaken on June 2, 2010 utilizing a truck mounted drill rig owned and operated by SPT Drilling Ltd. A total of ten (10) probeholes were drilled on the existing roadway at locations shown on the attached site plan. All probeholes were advanced to depths of 2.3 metres below ground surface (BGS).

The probehole layout was selected by J.R. Paine and Associates Ltd. personnel and was located in the field prior to drilling using a walking wheel. Approximate stationing was measured from the manhole cover at the intersection of Railway Avenue (Sta. 0+000). No ditch probeholes were drilled. Probehole locations were limited due to the numerous underground utilities and right of ways.

All probeholes were advanced with 150 millimetre diameter solid stem augers. A continuous visual description in accordance with the Modified Unified Soil Classification system was recorded on site, which included the soil types, depths, moisture, transitions, and other pertinent observations. Auger cuttings were collected at approximately 500 millimetre intervals for laboratory testing. No Standard Penetration Tests or Shelby tube samples were taken during drilling.

Following the drilling operation, a slotted piezometric standpipe was inserted into two (2) probeholes for watertable level determination. The probeholes were backfilled with drill cuttings, with a bentonite seal placed at the surface. Watertable readings were completed by the Village of Bawlf and obtained 6 and 29 days following the drilling program.

The following is a list of the approximate stationing and location of each probehole included in the project:

| Probehole # | Approximate Station | Location | Standpipe |
|-------------|---------------------|------------------|-----------|
| 2010-1 | 0 + 017 | North Bound Lane | No |
| 2010-2 | 0 + 077 | South Bound Lane | Yes |
| 2010-3 | 0 + 133 | North Bound Lane | No |
| 2010-4 | 0 + 212 | South Bound Lane | No |
| 2010-5 | 0 + 281 | North Bound Lane | No |
| 2010-6 | 0 + 330 | South Bound Lane | No |
| 2010-7 | 0 + 372 | North Bound Lane | No |
| 2010-8 | 0 + 431 | South Bound Lane | No |
| 2010-9 | 0 + 494 | North Bound Lane | No |
| 2010-10 | 0 + 580 | South Bound Lane | Yes |

4.0 LABORATORY TESTING

All disturbed bag samples returned to the laboratory were tested for moisture content. In addition, the plastic and liquid Atterberg Limits were determined on selected samples. Lab results are included on the attached probehole logs located in the Appendix.

5.0 SOIL CONDITIONS

A detailed description of the soils encountered is found on the attached probehole logs in the Appendix. In general, the soil conditions at this site consisted of surficial gravel, underlain by clay fill, underlain by organic/marginal material, underlain by native silty, sandy, clay till.

Granular Material

Granular material was present at the surface at all probehole locations within the existing roadways. The gravel structure was determined to be approximately 50 to 450 millimetres thick in the probeholes. The average gravel thickness was determined to be approximately 150 millimetres. The gravel depth is estimated and known only at the probehole locations and may vary between probeholes. Details of the gravel structure are outlined on the attached probehole logs in the Appendix.

Fill

Beneath the surficial gravel material, clay fill was encountered in all probeholes. The clay fill material was generally a grey and grey, silty, clay with a firm to very stiff consistency. The fill in all probeholes contained trace gravel and oxides as well as trace to moderate amounts of organics. The fill material was generally considered to be medium to high plastic plastic, with moisture contents between approximately 10 to 14 percent. The fill extended to depths of approximately 0.6 to 2.0 metres BGS.

Organic Clay

Organic clay was encountered in Probehole 2010-1, 2010-2, 2010-3, 2010-7 and 2010-8 below the clay fill. The organic clay was generally moist to very moist, dark grey to black and firm to stiff in consistency. Moisture contents were noted to be approximately 20 to 34 percent. The organic clay layers varied in thickness and are summarized in the table below.

| <u>Probehole #</u> | <u>Approximate Station</u> | <u>Depth (metres)</u> |
|--------------------|----------------------------|-----------------------|
| 2010-1 | 0 + 017 NB | 0.45 – 0.60 |
| 2010-2 | 0 + 077 SB | 0.3 – 0.60 |
| 2010-3 | 0 + 133 NB | 0.5 – 0.90 |
| 2010-7 | 0 + 372 NB | 0.5 – 0.75 |
| 2010-8 | 0 + 431 SB | 0.6 – 1.1 |

Clay Till

Native silty, sandy, clay till soils were encountered in all probeholes. The clay till material was encountered below the organic clay materials in Probehole 2010-1, 2010-2, 2010-3, 2010-7 and 2010-8 and below the clay fill materials in Probehole 2010-4, 2010-5, 2010-6, 2010-9 and 2010-10. The clay till material was generally moist, brown and stiff to very stiff in consistency. Atterberg Limit tests revealed the clay till material was medium plastic with plastic limits of approximately 12 - 15 percent, and liquid limits of approximately 40 to 41 percent. The clay material also featured traces of coal, oxides and gravel. Moisture contents were noted to be approximately 15 to 18 percent, which was near to slightly above the estimated optimum moisture content.

The clay till material was encountered to termination depths of approximately 2.3 metres in all probleholes.

6.0 GROUNDWATER CONDITIONS

As part of the drilling program, piezometric standpipes were installed in two of the ten probleholes. Two sets of watertable readings were taken at 6 and 29 days following drilling. The groundwater levels and elevations are presented in the following table and were relatively high.

Groundwater Table Readings
Proposed MaCrae Street Upgrading
(Metres Below Ground Surface)
Bawlf, Alberta

| <u>Probehole #</u> | <u>Slough and Water Accumulations at Probehole Completion</u> | <u>6 Day (June 8, 2010)</u> | <u>29 Day (June 30, 2010)</u> |
|---------------------------|---|-----------------------------|-------------------------------|
| 2010-2 (Sta. 0 + 077) | No slough or water | 0.90 m | 1.35 m |
| 2010-10 (Sta. 0 + 580) | No slough or water | 0.75 m | 1.00 m |

Watertable levels might fluctuate on a seasonal or yearly basis with the highest readings obtained in the spring or after periods of heavy rainfall. The period after standpipe installation was noted to have frequent rain periods. As a result, the above noted water table readings should be considered near to high seasonal levels. No accumulation of water was noted upon the completion of drilling in any of probleholes, however, a trace of water was noted in Testhole 2010-2 at a depth of approximately 2.1 metres BGS.

7.0 DISSCUSION AND RECOMMENDATIONS

1. The roadway was considered in fair condition at the time of drilling. Minor rutting was noticed in both lanes, while some isolated potholes were noted.

In discussions with Focus Corporation, it is assumed that no underground utilities are to be part of this rehabilitation/upgrading. JRP should be notified if in fact, utilities are to be constructed within the roadway in question as recommendations may be altered.

No preliminary design of the road was complete during the time of drilling although it is understood that the existing curb and gutter are to remain between Railway Avenue and Martin Avenue. It is also understood that the existing rural profile (north of Martin Avenue) will be upgraded to an urban profile including curbs and gutters.

Generally, the probeholes advanced within the existing road surface revealed clay fill, overlying an organic layer. The fill material typically contained trace organic content with moderate amounts of organics in only some holes. Organic clay was encountered below the fill in Probeholes 2010-1, 2010-2, 2010-3, 2010-7 and 2010-8.

It is emphasised that the organic materials composition may vary, and thicknesses are known only at probehole locations. Therefore, variations in the composition of the organic materials and amounts may be encountered during construction.

2. It is assumed that cuts will be required on site in order to match the existing curbs and intersections. In order to match the existing grade, removal of the existing gravel and clay fill materials will be required to accommodate the proposed structure. Judgement in the field during construction should be used in order to determine the suitability of clay fill material with variable concentrations of organics for use as backfill material. The clay materials with considerable concentrations of organics may not be used within pavement zone, but can be used behind curbs.

As mentioned previously, organic clay material was encountered at depths of approximately 0.3 to 0.6 metres. To incorporate the pavement structure, the organic clay material will likely be exposed in the area of Probehole 2010-2, 2010-3 and 2010-7. JRP recommends the complete removal, of any organic clay within the roadway. The existing gravel and clay fill material encountered in all probeholes may be suitable for subgrade fill material. JRP should be notified when the subgrade excavation is to commence, so that a review of the subgrade and fill material can be completed. Directions on how to proceed can be forwarded in writing at that time.

3. At the time of drilling the moisture content was near to slightly over optimum in the near surface fill and clay till. It should be noted however, that high water levels were noted in the Probeholes with standpipes. Overall, some subgrade areas could be soft and sensitive to mechanical disturbance.

4. The minimum subgrade treatment should consist of scarification and re-compaction of the top 150 mm of roadway to a minimum 100% SPD. The subgrade should be proof rolled after final compaction and any areas showing visible deflections should be inspected and repaired. Care must be taken not to allow any excess moisture into these soils. Early curb backfill should be considered.
5. Some extra subgrade work beyond the above mentioned subgrade preparation may be required if any very moist clay till materials are encountered. In these very moist areas, increased drying could be considered. This would involve over-excavating the very moist soils an estimate 0.6 to 0.9 metres, drying and then replacing and compacting the materials. The clays, dried to near optimum moisture, should be compacted to 98 percent Standard Proctor Density in maximum 150 millimetre lifts. Success with this option will depend on adequate drying weather, space and construction practices. Fall and wet weather construction will likely result in the need for extra subgrade work due to poor drying conditions. The varying conditions of the subsurface soils may cause difficulties during construction. The need for this extra work should be considered moderate.

A granular subbase may also be a desirable option where the very moist clay till soils are encountered. An estimated 300 millimetres of a 50 millimetre crush gravel should be budgeted. A non woven geotextile (AMOCO 4545 or equivalent) should initially be placed below the gravel for separation. The gravel should be compacted to 98 percent Standard Proctor Density. The need for this granular subbase should be considered low for this site, although it is dependant on the time of year, weather conditions, and quality of construction.

All subgrade should be proof rolled after final compaction and any areas showing visible deflections should be inspected and repaired.

6. Where fill is to be placed, the fill material below the upper 150 millimetres should be compacted to 98 percent of Standard Proctor Density. All fill should be placed in maximum thickness lifts of 150 millimetres. All fill should be approved by JRP prior to placement.
7. The observed watertable depths were considered high at this site, at 1.0 and 1.35 metres below ground surface. The site clays are considered moderately frost susceptible. A high watertable within approximately 3.0 metres of the road surface is required for significant

frost heaving to occur. The closer the watertable is to the surface, the higher is the frost heave potential. Higher than average maintenance may be required due to the frost heave concerns. To limit the frost heave concerns replacement of the frost susceptible soils with non frost susceptible soils or the use of insulation would be required. Typically these options are not cost effective and are only used in limited situations.

8. For areas with very moist, soft soils, construction traffic may encounter difficulties. It may be necessary to place an initial pad of material to facilitate the construction vehicle traffic. Judgment should be used in the field at the time of construction to determine an initial lift thickness. The need for an initial pad on this roadway will likely not be necessary, however this is best determined in the field.
9. It is recommended that all areas beyond the back of curb/sidewalk be landscaped as soon as possible to avoid water permeating into the subgrade from free standing water. The near surface soils encountered throughout this area exhibit a low to moderate swelling potential. It is important that subgrade soils not be allowed to dry excessively when exposed.
10. It will be important to ensure that no water is allowed to pond in the gravel base in any areas. Also, surface water will often collect within the granular base, causing subgrade softening and pavement damage. Therefore, it is recommended that wic drains be installed in the gravel road base at the curb bottom locations. The wic drains must be properly attached to the catch basins. The subgrade and pavement surface should be crowned at a minimum 2 percent for good long term road performance.
11. The following pavement design has been developed for the above noted roadway. The design life for the structures is 20 years and the designs incorporate 2 year staged construction. An assumed California Bearing Ratio of 3.0 percent for the top of the gravel subbase was used in the design. The stated Equivalent Single Axel Load (ESAL) values for different roadway designations were obtained from City of Edmonton guidelines as no traffic data was available at the time of this report. Any detailed traffic data should be forwarded to JRP for review as the following recommendations may be altered.

Recommended Unstaged Roadway Structure
Proposed MaCrae Street Road Upgrades

Option 1 (Hot- Mix Asphalt)

| | Local Residential (3.5 x 10⁵ ESAL's) | Minor Collector (1.0 x 10⁵ ESAL's) |
|----------------------------|--|--|
| Hot-Mix Asphaltic Concrete | 75 mm (ACR) | 45 mm (ACO) 65 mm (ACB) |
| Crushed Gravel (20 mm) | 250 mm | 250 mm |

Option 2 (Cold- Mix Asphalt)

| | | |
|-----------------------------|--------------|--------------|
| Cold-Mix Asphaltic Concrete | 75 mm (ASBC) | 75 mm (ASBC) |
| Crushed Gravel (20 mm) | 400 mm | 500 mm |

Notes: All gravel should be compacted to 100 percent of SPD, in maximum 150 mm lifts.

ACR = City of Edmonton Designation Asphaltic Concrete Residential

ACO = City of Edmonton Designation Asphaltic Concrete Overlay

ACB = City of Edmonton Designation Asphaltic Concrete Base

ASBC = Alberta Transportation Designation Asphalt Stabilized Base Course

12. Tests on selected soil samples indicated moderate to severe concentrations of water soluble soil sulphates in the near surface clay deposits. All concrete for surface improvements such as sidewalks and curbs may be constructed using C.S.A. Type GU (general use hydraulic cement).

8.0 CLOSURE

This report has been prepared for the exclusive and confidential use of Focus Corporation and the Village of Bawlf. Use of this report is limited to the MaCrae Street improvements only. The recommendations given are based on the subsurface soil conditions encountered during test boring, current construction techniques and generally accepted engineering practices. No other warranty, expressed or implied, is made. Due to geological randomness of many soils formations, no interpolation of soil conditions between or away from the probeholes has been made or implied. Soil conditions are known only at the test boring location. Should other soils be encountered during construction or other information pertinent becomes available, the undersigned should be contacted as the recommendations may be altered or modified.

We trust this information is satisfactory. If you should have any questions or comments, please contact our office.

Subject : Good Morning Case

To : village manager <villagemanager@bawlf.com>

Good Morning Case,

In talking with Jody I guess the next best step would be to actually advertise the RFP in the local papers perhaps to get more exposure. I was also wondering is it possible just to hire a local contractor from Bawlf to do the work and pay hourly etc.

That may be cheaper as well, just a thought

Talk to you soon

David

Attn: Case Van Herk

Project: Fire Hall Renovation

Read Contracting Ltd. is pleased to provide a budget for the renovation based on the information provided.

Read Contracting Ltd. will supply labor, material and equipment for the construction of the above mentioned project including:

- COR certified safety program
- Building permit
- Structural and architectural engineering
- 4/12 pitch engineered trusses
- 2x6 wall studs 16" O/C
- R20 insulation in exterior walls
- 2x4 wall and roof purlins 24" O/C
- 29ga allclad colored roof cladding
- 29ga colored Dura clad exterior wall cladding
- 29ga colored flashings and trims
- Vented ridge cap
- Aluminum soffit and fascia
- Aluminum Eves trough and downspouts
- 5/8 drywall taped and painted on ceilings and walls
- 1- 10'x14' td-134 overhead door

Dear Sir or Madam:

Re: READ CONTRACTING LTD.
4-4617 41 ST
CAMROSE AB T4V 2Y8

VILLAGE OF BAWLF FIRE HALL

The above named subcontractor has an account with WCB-Alberta in the following industry(ies):

| account | trade names(s)/industry | effective date | coverage |
|---------|-------------------------|----------------|---|
| 5223527 | INDUSTRIAL CONSTRUCTION | Jan 01, 2005 | worker coverage no personal coverage |

Please accept this letter as a clearance for this subcontractor under Section 126 of the Workers' Compensation Act, for work completed between the effective date of the account and the date of this letter, for the industry(ies) listed. If the subcontractor's account is closed, the clearance is effective for work done up to the close date. If work has not yet begun, obtain a clearance prior to releasing final payment. Any holdback on this account may be released for contracts completed, or for work completed up to the date of this letter.

Section 126 states that you have a responsibility to ensure your subcontractors' accounts are in good standing. To ensure this clearance has been issued for the correct subcontractor, please verify the subcontractor's address and industry information listed above.

Please note, if any directors of the corporation are injured at work, you are protected from lawsuit if they have personal coverage. If they do not have personal coverage, you may not be protected in the case of a workplace injury.

If the subcontractor is performing work for you outside Alberta, contact the WCB in that jurisdiction to determine your clearance and other WCB requirements.

Any alteration of this document is strictly prohibited and subject to a penalty up to \$5,000 on the first offense. Each subsequent offense will result in an increase in the penalty amount by \$5,000, up to a maximum \$25,000 per offense.

Yours truly,

eBusiness Support Team (6863024)

Mayors Report July/August 2013

- . July received calls about CAO and Office Manager
- . July received calls about Communications Director and PW jobs
- . Numerous calls about road conditions and drainage in Village
- . In August received many calls about the lift station from County employees
- . Talked to Justin about PW job
- . Received dog complaints (barking and running loose)
- . Received calls about new school construction start up times
- . Numerous meetings re staffing requirements for Village

Dear Mayor and Council;

Please find attached the **2012-2013 Annual Review** for Community Futures East Parkland. CFEP is a federally funded not-for-profit organization, based out of Mirror, which has been assisting communities and business owners since 1988.

We seek to sustain, diversify and expand our local economies. It is our mission to provide business advice, business training, assist business as an alternative lender, and assist community-based economic development projects. All our lending decisions are made right where we live by volunteers with diverse backgrounds, skill sets and perspectives – ranging from small business owners, former clients, and municipal councilors. The CFEP region is arbitrarily subdivided into areas from where a volunteer representative comes to the Board table to provide insight into the communities they represent, but more importantly, to work with the other members to direct resources and activities to benefit the entire region. **If you know of someone who would be interested in joining the CFEP Board, please direct them to the criteria and application process listed on our website, or have them contact us directly.**

The next **Annual General Meeting** will be held in Mirror on **Tuesday September 24, 2013 at 4:30 pm**, and as community stakeholders, we invite you, and any other interested community representatives, to attend. To ensure adequate space is provide, we ask that you RSVP the number of individuals who will be attending by Tuesday September 17, 2013.

Yours truly,

A handwritten signature in blue ink, appearing to read "Hans Spelt", written over a horizontal line.

ANNUAL REVIEW

2012-2013

Community
Futures

East Parkland

Message from the Chair

While modernization, realignment and restructuring were the hot topics last year, the inability of the Community Futures Offices to reach a consensus on how to accomplish this, resulted in business as usual for East Parkland.

The Manufacturing Cluster Project with the Central Alberta Rural Manufacturers Association (CARMA) was on the agenda for many Board meetings during the year as the project worked its way to its conclusion. The wind-up and Gala was held in Red Deer, where the participants declared the project a success, and we look forward to seeing the program, under the guidance of CARMA, continue as a self-supporting venture into the future.

We had many other opportunities present themselves throughout the year, such as providing education regarding downtown revitalization, and trainings for a 4-H youth camp and business plan competition out of Hobbema. We also investigated the development of a storefront enhancement program, youth financial literacy program, and presented the *Unleashing Local Capital Initiative* (COOP model) to many of our communities during the *2012 International Year of Cooperatives*. Our entrepreneurial clients took advantage of our assistance in areas of accounting, business planning, debt counseling, succession planning, product patenting, and human resource management. The lending program, as always, offered a unique array of potential business prospects for our region, with loans provided for such businesses as restaurants, within the oil and gas sector, and a pet supply store. We were also proud and pleased to have six current clients retire their obligations to us by transitioning to conventional financial sources.

Our volunteer Board of Directors was again very active and spent countless hours on the different economic development projects, loans and assisting the Staff in keeping the organization running smoothly. It is very fitting to give a special thanks to the Staff, for their commitment and dedication is indeed of great benefit for the Board, and the continued success of the organization.

Hans Spelt

Lending Statistics:

- **355 clients served**
- **18 applications presented**
- **15 loans approved with funds disbursed**
- **\$839,000 disbursed**
- **45 jobs created or maintained**
- **Interest rate stable at 6.25% throughout the entire year**

ALBERTA
MUNICIPAL AFFAIRS

Office of the Minister

AR68900

August 8, 2013

Village of Bawlf
PO Box 40
Bawlf, AB T0B 0J0

RECEIVED

AUG 13 2013

Dear Municipal Official:

In fall 2013, the *New Home Buyer Protection Act (NHBPA)* will come into force as part of the Government of Alberta's ongoing commitment to improving consumer protection, recourse options, and builder accountability for new homes built in Alberta. I am requesting your assistance in preparing builders for the changes the *NHBPA* will bring.

Municipal Affairs has prepared a handout notifying builders that the Act will soon be coming into force and appropriate warranty coverage will be required on new homes in order for a building permit to be issued. Website and contact information are provided, so builders can access more detailed information.

We have included a supply of these handouts with this letter. Please distribute them to builders who are applying for, or receiving, development or building permits. Builders that have questions or want more details can be referred to Municipal Affairs' website and contact information provided on the handout.

In addition to this letter and the initial supply of handouts, you will be receiving an email containing a PDF version of the handout. When your supply of handouts runs out, you may use the PDF to print more or request additional handouts by contacting Alberta Municipal Affairs at 1-866-421-6929.

Thank you for your assistance in distributing this important information.

Sincerely,

Doug Griffiths
Minister

Attachment

The *New Home Buyer Protection Act* will come into force in **fall 2013**.

After the Act comes into force, all new homes will require a warranty.

Building permits will only be issued for homes with appropriate warranty coverage.

For more information, visit www.municipalaffairs.alberta.ca/NHBP

or contact Alberta Municipal Affairs at 1-866-421-6929.

Alberta  Municipal Affairs

Re: Franchise Fee & Cap Changes

Dear Lynn Horbasenko– Village Manager:

As per Article 5 of the Electric Distribution System Franchise Agreement, your municipality has the option to adjust the Franchise Fee percentage annually upon written notice to FortisAlberta.

During 2013 your municipality signed the new Franchise Agreement and at that time stated the Franchise Fee to be used for 2014. This letter acknowledges that your municipality is not planning to submit any changes to the Franchise percentage for 2014 at this time. If your municipality wishes to change the percentage at a later date during 2014 or in later years this can be done with the assistance of your Stakeholder Relations Manager.

If you have any questions or concerns, please contact Kayla Law at 780-464-8816 or kayla.law@fortisalberta.com or your Stakeholder Relations Manager.

Sincerely,

A handwritten signature in cursive script that reads "Kayla C. Law".

August 16, 2013

Good Morning,

I am proud to share with you the 2012-2013 Yellowhead East Health Advisory Council Annual Report and ask that you share this document with your Councillors, community leaders and constituents.

As one of twelve Health Advisory Councils across Alberta, we work hard behind the scenes to ensure the health services in our communities respond to the needs of those who use them. We do this by talking with our community members, listening to what they have to say about health services, and providing our collective feedback to AHS on what's working in the health care system within our communities and what can improve.

Supporting Albertans every day and listening to their opinions is essential to improving the quality and accountability of health services. As volunteer Council members, we strive to achieve this and, over the past year, have made great progress.

I welcome you to have a look at our Annual Report to learn more about our Council by clicking on the link below:

[Yellowhead East Health Advisory Council](#)

You can also see what the other eleven Health Advisory Councils and two Provincial Advisory Councils have been up to by accessing their Annual Reports here:

[All 12 Health Advisory Council Annual Reports](#)

[Provincial Advisory Council on Cancer Annual Report](#)

[Provincial Advisory Council on Addiction & Mental Health Annual Report](#)

Our meetings are open to the public; I invite you to visit the AHS website for upcoming details by clicking [here](#).

For more information, please contact:

Community Engagement, Alberta Health Services

Phone: 1-877-275-8830

Fax: 403-943-1163

E-mail: community.engagement@albertahealthservices.ca

Sincerely,

Don Whittaker,
Chair, Yellowhead East Health Advisory Council
