INVESTMENT MICRO FARM

JANUARY 2019 // PREPARED BY DAVID L. DEBSAR

Summer 2019

ORGANIC FARMS EQUAL HIGH RETURNS

Project: Micro Coffee Farms.

Project Mangers: Ruth Clarkson, GM. Dino Laraes.

Oversight: Law Firm and Accounting Firm.

Listed in Report page 2 and page 3.

- **Investment Amount Required:** Two (2) Micro farm investment requirements. Ranging from \$50,000-\$550,000 listed in Page 2 of supplemental Farm Report.
- **Return:** Every Six (6) months based on sales revenue. Approx 78% percent to investor. See accounting break down of expenses ,sales etc in Report 2 of Farm Report.

Our Micro Coffee Farms are designed for high-end specialty markets and online sales. Micro Organic coffee farms are in California. This enables full access to expedient distribution of our products to timely market. California's geographical location and weather are ideal for our farms in the Rancho Cucamonga and Bakersfield's agricultural regions.

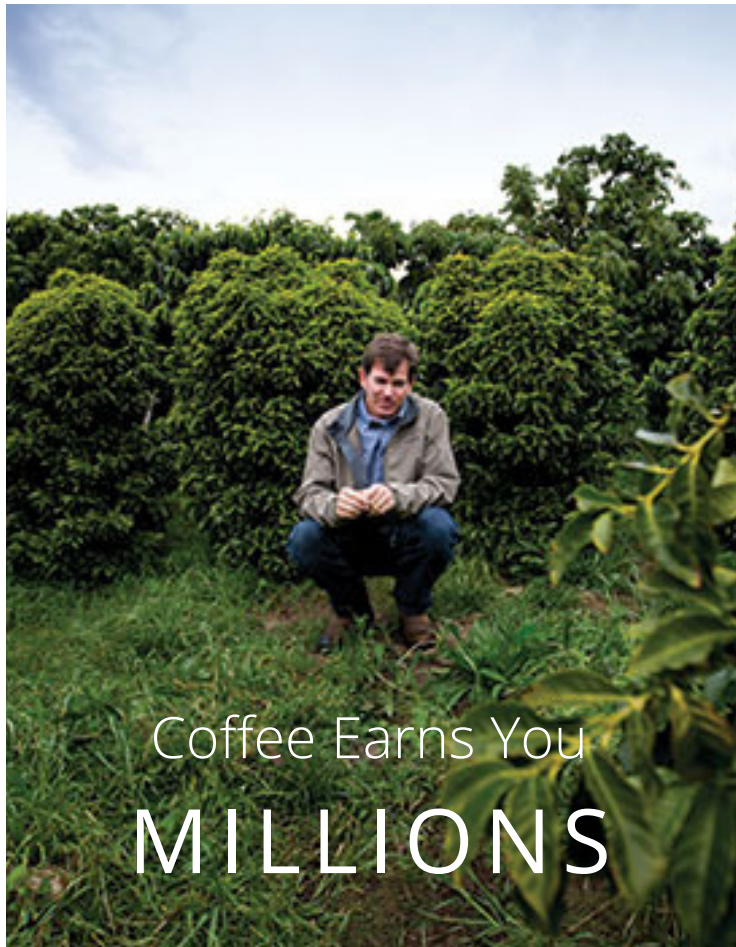

- Plentiful Inexpensive labor, farmland at and below-market prices are available. Enable this as Investment Grade opportunity with low risk.

International Agribusiness industries, invested in farms in the past 20 years to have to gain access to immigration waivers, papers, U.S. residency for workers and citizens due to specialized skill sets.

As a result of current binding immigration changes inconvenient to the International Agribusiness industries. In conjunction with several new changes that require American citizenship, to operate farms to receive credits and subsidies. There is now at present high value to raw farmland inventories.

WE'VE REACHED OUR HIGHEST SALES RATE

Our Micro farms are built a modular income-producing component system. Our business model is focused on a 100 percent Organic self-sufficiency model. We have achieved a minimal carbon footprint at best. **Meaning that the pollination** required to enable all Coffee trees and gourmet crops to reach full yields. Is provided by an Apiary unit operated by the Certified Farms managers on the premise. No chemicals or by products or pesticides. 100% Organic.

The *Apiary unit also produces revenue twice a year approximately \$40,000. This figure stated is for the smallest of our Micro Farms. Full details in Farm Report #2.

Our Micro farms are built a modular income-producing component system. Our business model is focused on a 100 percent Organic self-sufficiency model. Meaning that the pollination required to enable all Coffee trees and gourmet crops to reach full yields. Is provided by an Apiary unit operated by the Farms managers on the premise.

The Apiary unit also produces revenue twice a year approximately \$30,000. This figure stated is for the smallest of our Micro Farms. Please note that our Apiary livestock is purchased exclusively from the University of Virginia. Full details in Farm Report #2.

The most expensive component of an organic farm is of course **Water**. We have achieved a perfect balance of nutrients and water for our Trees and crops through Aquaculture. Our Irrigation is comprised of tank water from several aquaculture ventures located on farm premises.

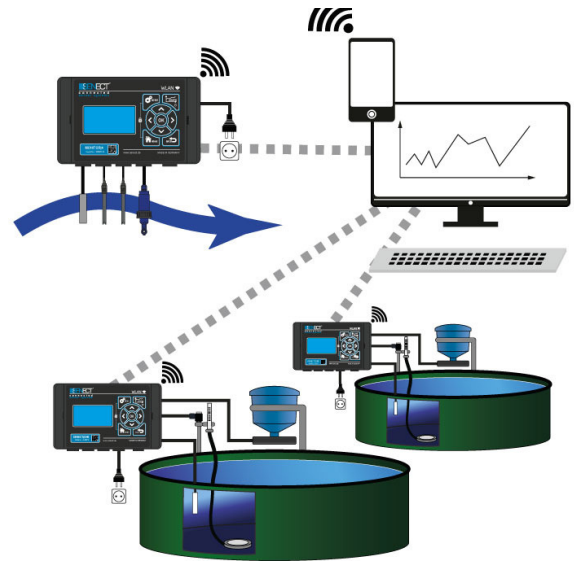

The fish are sold to nearby restaurants and supermarkets. Please keep in mind that our Farms are in the central regions of California. Allowing us to offer daily fresh fish at a slightly lower price than fish trucked in from Los Angeles, three hours away.

The Aquaculture module now processes a steady monthly income with sales last year exceeding \$800,000. The types of Fish and sales data and distribution channels are detailed and documented in Farm Report #2.

Although imitation is flattery and can lead to further development of a product, service and an idea. It also leads to cheap imitations and knockoffs that dilute the primary value of an investment. We now charge a refundable or applied to the purchase price of the farm. **A detailed White Paper** and how to start on the Micro Organic Farm project.

The cost is \$150.00. To order your Farm Report #2 White Paper, that will be sent as a "Live Real-Time Information form. That updates daily. Please download and use CashApp and pay to our firms' username. "\$Bluecar56" Please don't forget to include the Dollar sign \$ in our username."\$Bluecar56". A receipt will also be sent to you.

Call if you would like an invoice sent instead.

PROSPER
2019

Agriculture is more sustainable than the stock market. When you invest in agriculture, you are investing in a physical plot of land. This land's value only appreciates, unlike stocks in businesses.
