

# Everpure Ice Filtration

Water filters remove the particulates and chemicals which remain from the main water supply. These chemicals might include chlorine, fluorine, sand, and dirt that might have dissolved in the water.

A water filter might be considered an optional attachment to some, but to many restaurants, it's an essential piece of equipment. Here are six benefits of using a commercial ice filter.

## **Your ice is cleaner and tastes better**

Unless you're specifically importing your water or have a well, you've hooked your machine up to the standard water line. This water, while drinkable, still has contaminants that can alter the taste of the water. A water filter can keep these out of your ice.

## **The Inside of Your Ice Machine Won't Slime as Fast**

Don't you think that it's better to remove the causes of slime right from the source? While it doesn't completely eliminate the slime which can form, a water filter reduces the number of contaminants which cause slime in your ice bin and your pipes.

## **Not as Much Scale**

Scale is the sediment that is left over when water is turned into ice. The minerals which were once dissolved in the water return to their solid form and cling to the sides of the ice bin. When you remove those particulates from the process, cleaning the ice bin becomes much easier.

## **Faster Ice When You Need It**

Without all of those contaminants clogging the lines, an ice machine will run at super speed. Water with contaminants or deposits causes overall production to slow down. That tiny boost in speed translates into happier patrons and higher tips.

## **Lower Bills**

Have you ever noticed how the air conditioner seems to blow a little bit cooler with a new filter? Ice filters help your ice machines run more efficiently. Change out your ice filter every six months for the maximum effect.

## **Choose a water filter that can handle the load**

You want a water filter that will grow with the size of the ice machine. Let's say that you have a [Hoshizaki ice machine](#) that fits under your counter. You want to pick out something for your Hoshizaki ice machine that will match the water flow. The water filter you choose, whether it is for a Hoshizaki ice machine or another ice machine, will work tirelessly to make sure that your ice machine stays in the background. Let the awesome customer service and divine cooking take the stage, not frozen cubes of water.
