VFC400 Installation

Installation

Your kit includes:

- VFC400 Data Logger

- Stainless Steel Probe encased in glycol

- Acrylic stand for probe and mounting equipment for logger

- Adhesive backed zip tie mounts and zip ties for securing cable

- Spare battery

- 2 year NIST traceable Certificate of Calibration compliant to ISO 17025: 2005

Installation

1

Place acrylic stand and probe vial near the middle of the fridge/freezer

2

Route the cable under the wire rack and secure with zip tie

3

Route the cable toward the wall of the hinge side and secure with zip tie

Installation

- Route the cable toward the front of the fridge/freezer on the hinge side and secure

**Place the glycol bottle in the fridge/freezer for <u>at least 1.5 hours</u> prior to starting your logger to allow the solution to reach the appropriate temperature.

Installation

- Adhere the mounting bracket to the side or front of your fridge/freezer

- Place the logger into the mounting bracket and plug the sensor wire into the logger (left side)

- Approx. 6 inches underneath the logger, adhere cable tie bracket and secure the cable with a Zip tie. Leave enough slack in the cable so you can plug and unplug the VFC400 easily
