

A MAJESTIC LEGACY

Since 1894, Majestic has been dedicated to keeping families warm. Originally a manufacturer of cast iron furnaces and coal chutes, Majestic created its first factory built fireplace in the 1930s and never looked back. Since then, Majestic has been producing wood and gas fireplaces known for outstanding durability, superior quality and stunning good looks.

With a wide range of eye-catching styles, convenient sizes and trending trims, Majestic products are designed to be the beautiful heart of your home. That's why, for decades, Majestic has been the fireplace of choice for homes across North America. We believe trust is earned, not given, and appreciate the faith you've shown in our brand for over 100 years.

Come home to a Majestic gas fireplace, and enjoy the entertainment and romance you deserve.

WHY A FIREPLACE?

From an elemental standpoint, fire is king. From a design standpoint, the regal ambiance a fireplace brings to a space is undeniable. With today's hearth innovations and technologies, it's possible to include a fireplace in virtually any room in your residential or commercial project.

New homebuyers rank fireplaces as the top most desired decorative products in a new home¹

A gas fireplace will add between

\$2,950 **-** \$5,900

to a home's value²

Direct vent gas is the **preferred technology** in every green

building program³

- 1 2016 Realtor.com Homebuyer & Realtor Research, "Fireplace is the #1 Must Have Home Feature"; 2016 Angie's List Homebuyer & Realtor Research, "Both indoor and outdoor fireplaces are one of the most sought after home features by both homebuyers and realtors"
- 2 Marshall & Swift Residential Cost Handbook
- 3 2013 NAHB "What Homebuyers Really Want"

SEEING IS BELIEVING

Competitors have tried to say their fireplaces are bigger, but are they really? Consumers can be misled by fireplace measurements that are not standardized. With Majestic, you can show the consumer the difference.

The Majestic brand uses a simple system that features the width of the fireplace's viewing area right in the product name. Consumers care about what they "see" not what is hidden. For example, the width of the viewing area on the Quartz 36 fireplace is 36 inches.

CAD Details

Revit Objects

CSI Specs

MAJESTIC MAKES SPECIFYING SIMPLE

Have confidence in your plans by leveraging our array of design and specification tools including proprietary CAD drawings compatible with the latest AutoCAD software, and 3D Revit BIM objects and families. Majestic also has complete 3-Part CSI/CSA fireplaces specifications for you to add instantly into section 10-31-00 of your construction documents.

DESIGN CONSIDERATIONS

The placement of the fireplace is critical to specifying the right fireplace for the right project. When evaluating how to best work a fireplace model into your floor plan, make sure to work with your local Hearth Expert™ to factor in the following components:

Exterior Wall

A classic application that suits both traditional and contemporary fireplace models. These applications typically require the least complicated vent runs, but may require an exterior chase or bump out.

Corner

Best used in floorplans with square footage to spare or where other architectural elements (i.e. windows) take precedence as a focal point.

Traditional models or smaller modern linear units work best for these applications.

Interior Wall / Island

An interior island application is an innovative way to enhance a space. See-through models are highly desired for these types of design, particularly in open floor plans. These applications may require a power vent system and a more complex vent run.

Install Virtually Anywhere: Power Venting Technology

Fireplaces aren't just for exterior walls. A fan-powered accessory with slim venting can zigzag throughout your home – up, down, over or under – making it possible to install a gas fireplace virtually anywhere.

SPECIFICATION CHECK LIST

Planning is critical to ensure the model you are specifying will work with your home plans. When specifying a fireplace model for your floor plan, make sure to work with your local Hearth Expert to factor in the following factors:

For both the fireplace itself and for any vent pipes that must terminate through a wall.

Connection Requirements

Make sure you understand where venting, gas and electrical connection points are on the model you're specifying.

Vent Run Requirements

The maximum and minimum lengths required for vertical, horizontal and mixed vent runs may vary from model to model. Understanding these parameters early on is essential in deciding where best to place the fireplace in your plans.

Clearances to Combustibles

For mantels, flooring, surround material and appliances adjacent to the fireplace.

Exterior Termination Location

Know the distances needed from the termination cap to nearby fenestrations, overhangs, soffits and sidewalks.

WHY A GAS FIREPLACE?

Gas fueled fireplaces offer the most versatility of placement, model variety, and technology. Majestic gas fueled fireplaces will not only add an unforgettable focal point to your home, but ambiance and comfort to the spaces you're creating to deliver an experience of royal proportions. Clean-burning and efficient, building and design professionals should include at least one gas fueled fireplace in entry level new construction homes and a second or third fireplace when planning move-up or luxury/custom properties.

Heat Management Solutions

Increase homeowner satisfaction by specifying a model with heat management.

Heat-Zone® Kit

away. Redirect up to 50% of the heat, while reducing wall temperatures above the fireplace.

Heat Duct Kit

from your fireplace to the rest of your

home, by redistributing heat from the fireplace via the furnace ductwork. Redirect up to 50% of the heat, while reducing wall temperatures above the fireplace.

Heat Out Kit

Draw heat from your fireplace and direct it outside. Redirect up

to 40% of the heat while reducing wall temperatures above the fireplace.

SmartWall[™] TV Kit

Design flexibility with an automatic fan that allows a TV to be mounted 12" above the

fireplace without a mantel or shelf.1

- 1 The SmartWall fan will and must run continuously to move the heat away from the area above the fireplace. Also minimum guidelines must be followed:
- . Minimum of 3" gap between the TV and wall at all angles
- . Minimum of 24" to side wall
- Ambient room temperature 75° F or less
- See TV manufacturer's recommendation for TV operating temperatures
- Minimum 60" from the top of the fireplace opening to the ceiling.

MARQUIS II SERIES

Direct Vent Gas Fireplace

The Marquis II series gas fireplace fills your home with comfort. Watch the scene unfold with an expansive view of the flames as they wrap around split logs. The authentic masonry appearance and accent lighting enhance the beautiful fire.

WHY A WOOD FIREPLACE?

Majestic wood burning fireplaces are a robust, reliable and budget-friendly alternative to true masonry fireplaces and are ideal for projects where the hearth is used seasonally or when end-users are seeking the hands-on experience of a woodfueled appliance. It's important to understand local codes when specifying wood burning models, particularly when seeking to comply with EPA requirements and other state and city mandates.

Termination Requirements for Wood Burning Fireplaces

The quality of the fire depends on where you design—in the chimney and termination components for the specified wood burning model. It's important to get with a local hearth installer early in the design process to ensure proper termination placement. Variables such as roof angle, prevailing wind location, and nearby overhangs, objects and openings may need to be taken into consideration.

ASHLAND

Wood Burning Fireplace

The Ashland delivers on every level – customize the design with three available sizes and stylish finishing options. The large firebox gives you a front row seat for unforgettable fires, while the proven history of performance provides peace of mind for many years to come.¹

WHY AN ELECTRIC FIREPLACE?

Electric fireplaces are an excellent option when no other fuel sources are available or when vent runs are exceeded. Available in both built-in and wall-mounted units, electric fireplaces will entice end-users with vibrant LED "flames", unique design features like backlighting, and heat optional operation.

Easy and Economical

Electric fireplaces provide a unique focal point without expensive installation costs as they require no venting. At an entry price point and costing just pennies a day to operate, they are an ideal hearth solution to specify for any residential or commercial space. Ideal as a second or third fireplace, electric fireplaces can be installed in any room of a property.

Heat Optional

The heat output of electric fireplaces can be adjusted or turned off altogether – an excellent solution for projects where the ambiance of a fire is desired without the supplemental warmth. Specify electric models when building in warm climates or for spaces that would benefit from a heat-optional function.

Environmentally Friendly

Electric fireplaces emit zero combustion byproducts and are allowed in all national green building programs.

SIMPLIFIRE BUILT-IN

Electric Fireplace

Adding the traditional look of a fireplace to your home has never been this easy. A detailed masonry-style interior, textured log set and four different flame intensity levels enhance the appeal of the SimpliFire Built-In electric fireplace series. Enjoy the ambiance – with or without the heat. Experience "Fire Made Simple."

CASTLEWOOD

Outdoor Wood Burning Fireplace

The Castlewood turns any outdoor area into a welcoming and relaxing living space. A large, high opening provides a dramatic view from across the yard, and a textured brick interior offers masonry-style looks at a fraction of the cost. Enjoy the experience of a large wood fire with the Castlewood.
