

## Automotive Corrosion Treatment Abrading Stones

ACR Glass has been performing Corrosion Treatment for its customers for many years. In that time, and with our efforts to develop benchmark standards and procedures designed to do the best job possible for the customer in the least amount of time, with no sacrifices in safety for the technician or the vehicle, we have probably done all the trial and error tests on tools you can imagine.

This is the abrasive stone/burr we have chosen as one of the best for mitigating corrosion damage prior to application of a new corrosion protection layer. This is a softer, lower grit stone that actually works better with less pressure by the technician. In addition, it abrades through corrosion better than it removes steel thickness, an obvious benefit.

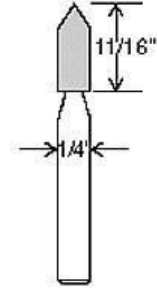

With a lighter touch, we think your technicians will quickly realize the benefits in safety, speed, and therefore efficiency. It's 1/4" arbor mounts easily into a variety of air, electric, or battery powered tools.

Due to our bulk purchasing, we are able to offer these at a significant savings from the manufacturer's retail price of \$10.00 each, to only \$6.00 each. One stone, properly used, can easily abrade significant areas of corrosion, and provide the shop with a reasonable profit on the burr itself.

Please call us with your orders and have your credit card ready, and we will process and ship orders via UPS within 24 hours.

MasterCard, Discover, and VISA accepted.

Thank you!

1 1/16in Tall x 1/4in Dia., 60 Grit

### Mounted Wheel

Use safety glasses to protect eyes.

Grinding wheel permanently mounted on a 1/4in x 1 1/2in shank for use on a drill or die grinder.
