

CLAWFOOT TUBS FEET CONNECTION

1. Place your tub upside down on a soft surface.
2. Remove the stud covers and the nuts and washers from the studs on the bottom of the tub

3. Loosely attach the bars to the base of the tub. Don't tighten fully as you will need to adjust later

4. Place the claw foot in position. Hold the claw foot in position against the tub as you screw in the foot fixing bolt.

5. Place the lock washer on the bolt. Apply Lock-tight to the bolt for added security.

6. Tighten the claw foot fixing bolt; make sure it fits well against the tub. If the foot doesn't fit well, adjust by sliding the holding bar. When everything fits well, tighten the nuts fully to studs on the tub.

<p>7. Adjust bolts at feet to level the tub. At this time, add small felt pads to bolt head.</p>	
--------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------

<p>8. Position the tub in place and mark off holes for fixing to floor. It is acceptable to attach only two feet to the floor where the connectors cannot be seen, so long as the clips are positioned to ensure the tub cannot move when bumped. Move the tub away and drill the holes.</p>	
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------

<p>9. Move the tub back into place and place the black rubber washer under the fixing clip over the hole. Tighten screw to the floor.</p>	
-------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------

<p>10. To complete your package purchase, attach the faucet, drain and supply lines to your tub as shown on the individual item manuals.</p>	<p>Items included with the Clawfoot tub; 4 stainless lag screws 4 Locking washers with foot fixing bolts 4 rubber washers 4 felt pads 4 brackets to attach to floor</p>
