

ICS Air Jetted Tubs Have the Best Design

The Tub Design

Air tubs or bubble tubs are not all the same!

(cut away of typical air tub)

The added air chamber design has many problems...mold, mildew, algae and grunge.

Many national brand name tubs are made with an attached air chamber with holes that are drilled through the tubs. These holes are not air jets! Air flows out of the holes when the blower is on but there is always water in the chamber.

This water is never completely removed by the air flow from the purge cycle and drying could take hours or days.

Our ICS Quality Air Tubs are made with individual air jets!

Real jets drain water into the tub naturally. The design is key to a clean air system. All the air supply lines are attached above the jets, so gravity removes most of the water. Then auto purge dries the air supply lines.

Heated blowers provide for a longer, warmer bath. The number and location of the air jets is optimized. Multiple speed blowers allow for air speed adjustment.

ICS tubs are available with Water and Air Jetting systems .

QUALITY
ICS
BATHS

Our side mounted air jets
Drain water into the tubs after use.
Max. number of jets are placed
around the tub side near the bottom.
Air jets fill tub with bubbles.

Water jets are individually adjustable.
Water Heaters 120 volt available.
Pump are matched to jets for flow.

ICS uses simple on-off controls.
Push buttons cycle Blower speeds.
Variable plump control, optional.

Real Air jets, not holes drilled in tub.
These jets drain correctly.
Heated Blowers , Multi – speed.
