

PURE HEAT

ICS Buys these Electric Heaters from
Several Manufacturers. Specs may vary.

Hydro-Quip, the industry leader in hydrotherapy bath heating technology, introduces the
Pure Heat™ - Universal Series of in-line bath heaters.

- Suitable for new installation or retrofit.
- A model for every jetted bath application
- UL Standard 1795 compliant.
 - ⊗ (2) bonding lugs
 - ⊗ # 8 AWG bonding wire
 - ⊗ fittings for installation to 3/4", 1" or 1-1/2" PVC plumbing (101 series)
 - ⊗ fittings for installation to 1-1/2" or 2" PVC plumbing (301 series)
 - ⊗ Field installation specific installation instructions.
- All models provide the 100% efficiency of **Certified Real Heat™** technology. No alternative bath heating devices compare.
- For "T" shaped pressure side models, 240-volt models, or custom requests visit our web site www.bathheaters.com or call 1-520-887-3424

**Warning these heaters require dedicated 120 volt 20 amp GFI
Electrical service and can not be ran on pump circuit.**

Amps draw is 13 amps @ 120 volts. A small water heater element contained in a stainless steel tub, provides 1500 KW of heat.

Thermowave is the alternative to electric in-line heaters!

Thermowave creates FREE HEAT by heating water without an electric heater. Thermowave heats the bath's water with the friction of water molecules. With rising electric costs sweeping the nation Thermowave is now, more than ever, being sought after as the electric alternative. The addition of Thermowave to your product line adds a outstanding new feature and benefit, FREE HEAT. A closing tool every sale would profit from, and increases your bottom line.

Who couldn't sell FREE HEAT?

With installation the Termowave Heater systems, our pumps are upsized one grade, to aid in heat production and retention of our desired water pressure.

Most Drop-in and Slide In tubs can use these heaters, Excluding V jetted series tubs.

Few Freestanding tubs can use these heaters.

Ask your salesman for use on your tub by model.
