

Objective: SWBAT rewrite the polynomial using the distributive property when finding the area of the rectangle and find the GCF when finding the quotient.

Bell Ringer : *What are the similarities and differences of the two methods?*

is the same as

Find the Area	Find the Quotient
$A = L \times W$ <i>5 is the GCF of the Area</i>	<i>12 is the GCF of the Area</i>

Reflection: What have you learned?
