

WHAT IS "LEVEL"?

Sloped AND "Bumpy" = NOT LEVEL

Sloped but NOT "Bumpy" = NOT LEVEL

NOT Sloped AND NOT "Bumpy" = LEVEL

- **For metal buildings**, your site must be within 4-6" of level from side to side and front to back. That is all the crew can adjust for and still install your building. If your site is not relatively level, you will be charged for rescheduling or for work done to level your building.
- If you are unsure about your site's level status contact a grading contractor who can shoot heights and give you recommendations for leveling your site.
