

For Best Results:

- Pre-soak turf surface lightly with water hose prior to product application. (Doing this prevents burning of the live enzymes)
- Agitate / Shake the 32 oz bottle of product to mix prior to application. This separates the enzymes from forming groups.
- Insert water hose in max flow nozzle, ensuring black gasket is on the inside of the max flow nozzle.
- Tighten bottle to nozzle clockwise by hand; do not over tighten.
- Turn water source on.
- While holding the hose and nozzle end away from you, turn the safety tab back towards you.
- Point the nozzle at the soiled areas and spray using a sweeping motion.
- The nozzle dilutes the PE-51 concentrate product to 2 oz. / gallon, which covers 600 – 900 square feet.
- When finished, turn the safety tab back to the upright position, turn water hose off at the source, and disconnect from max flow nozzle.
- Turn the hose on without the nozzle.
- Lightly spray the turf keeping the turf wet for as long as you can.
- The longer the turf is wet the better for enzymes to move around and kill bad bacteria.
- For first time application, use 6-8 oz per gallon / Or spray and let set for 10 minutes. Repeat 3 times (Do not let the turf fibers dry before repeating)
- For routine maintenance, 2 oz per gallon (max flow nozzle is set for 2 oz per gallon of water)
- Store in a dry area out of direct UV lighting. Between 40-120 degrees Fahrenheit.
- Save the max flow nozzle and 32 oz bottle to use with 1 gallon refill. (Note: The max flow nozzle will not fit the gallon jug.)
- Do not leave dispensing containers open and vented to the outside; always reseal with the supplied cap.
