

Overview

We love our pets - They're family. When it comes to cleaning up their area, we only want the safest products available.

- ✓ Nontoxic, biodegradable, concentrated enzyme product.
- ✓ Certified salmonella free
- ✓ Leaves behind no residue on concrete or rock.
- ✓ Digests waste until nothing remains.
- ✓ No formation of hydrogen sulfide (rotten egg odor)
- ✓ Clean fresh cut grass scent.
- ✓ Composed of "live liquid" enzymes vs. typical powdered enzymes which can leave residue.

The Science

- ✓ Blend of good bio-engineered bacteria.
- ✓ Over 250 billion micro-organisms per gallon.
- ✓ Enzymes withstand heat up to 200 deg F.
- ✓ It is naturally occurring non-pathogenic active bacteria.
- ✓ It is naturally occurring non-pathogenic active bacteria.

- ✓ Resistance to
 - › Chlorinated products
 - › Disinfectants
 - › Bleach
 - › High acid and alkaline conditions.
- ✓ Reduce bio-chemical oxygen demand (BOD) and chemical oxygen demand (COD) 80% within 5 days.
- ✓ Will NOT corrode, burn, dissolve or eat away any surface by chemical action.

What is a "Live Liquid" Enzyme?

- ✓ It is an enzyme which has never been turned into a powder for processing or shipping.
- ✓ A good bacterium which moves in wet conditions to break down waste into smaller particles to be digested.
- ✓ Works only on biological components for which it is intended.
- ✓ No adverse reactions or destruction of plastic, rubber, or turf infill.
- ✓ Works excellent with ZeoFill the #1 brand turf infill for dog odor control.
- ✓ Cleans inside of the ZeoFill granule for better odor control.
- ✓ It can be sprayed while animals are still present on the area to be cleaned.

Product Application

1. Spray hot surface with plain hose water before applying the live PE-51 enzymes. This prevents killing the good enzymes on contact.

2. Attach nozzle onto a 32 oz bottle. Make sure there are no packing materials obstructing the inside of the siphon tube. Make sure not to over-tighten.

3. Attach a standard garden hose to the other end of the PE-51 nozzle. Make sure not to over-tighten. Then turn on your water source.

4. With thumb, pull the white safety tab backwards and at the same time, turn knob clockwise a quarter turn. This will open the water valve to "On" position.

5. Spray turf in a sweeping left to right motion, ensuring surface is completely covered. There is no set timing as to how much product to use.

6. When done, turn knob counterclockwise to the "Off" position and shut off your water source.

7. Remove garden hose from the nozzle.

8. Lightly mist top of the turf with plain hose water to keep the top of the turf wet. Do not flush out the enzymes! This allows the PE-51 enzymes to move freely around the turf.
