FOR IMMEDIATE RELEASE

## LOGIX 3.0 ADDS CARBON FOOTPRINT AND GREENHOUSE GAS MODELING IN ITS LATEST ON-DEMAND DISTRIBUTION NETWORK DESIGN APPLICATION

(HERNDON, VA) – LOGISTIX SOLUTIONS has announced the availability of carbon footprint and greenhouse gas modeling and reporting in its latest version of Logix, an On-Demand application that enables logistics and supply chain professionals to model their operations and determine their optimum distribution network strategies, number and location of distribution centers, cross dock and regional warehouse locations, sourcing alternatives and other strategic decisions.

“Logix now calculates metric tons of CO2 and other Greenhouse Gas emissions from our users’ supply chain and distribution network strategies based on the various transport modes utilized throughout the network”, notes Logistix Solutions’ President and CEO Robert Camozzo. “With rising fuel costs and a concern for a cleaner environment throughout the industry, users can now benchmark their current carbon footprint and optimize their distribution network and supply chain utilizing cleaner technology and transport modes such as rail, ocean freight and intermodal.”

With a minimal monthly subscription, Logix addresses the need for retail, food and beverage, CPG, manufacturing and high-tech companies to handle complex supply chain and distribution problems that used to require ERP-class distribution network modeling tools. Companies are discovering that an efficient distribution network can also contribute to lower CO2 and Greenhouse Gas emissions. Logix quickly provides optimum supply chain solutions and CO2 emission levels to compare each alternative strategy and current state operations.

Based on extensive experience working with Fortune 500 companies, Logix is a full-featured, on-demand supply chain optimization, site location and distribution network modeling application. Logix is available directly from Logistix Solutions at [www.logistixsolutions.com](http://www.logistixsolutions.com). Users can request the free demo version or can sign up on a subscription basis. An on-line tutorial and user-guide is available as well as on-line training and on-site consulting, if needed.

### About Logistix Solutions

Logistix Solutions provides On-Demand Solutions for Logistics Professionals to support strategic planning and rigorous cost cutting requirements. Specializing in supply chain management software, Logistix Solutions was founded in 2006 by industry veteran Robert Camozzo, with over 20 years’ experience in supply chain software and services for mid-tier and Fortune 500 companies in transportation, food and grocery, manufacturing, retail, high-tech and CPG.
