Dear Home Owner,

If you are like our clients, you want to know about the best ways to maintain and protect the value of your home and grounds.

You don't want to consider home improvement projects if the value-add is not there. You do want to identify areas of your home that need attention. Then, when repairs are complete, you consider new projects that enhance the enjoyment and utility of your living space.

We do repairs and improvements of all sizes.

In the past 19 years we have completed more than 2100 projects for clients in the Somerset Hills area. As one of them has told us, "You can build so we do not have to repair. And you can repair so we do not have to rebuild."

So we recommend alternatives that are attractive, more cost effective, that save you money in the long run, and that more efficiently utilize and protect our natural resources and environment. A kitchen or bath update using engineered stone counter tops like Silestone or Polarstone, for example. A deck repair and extension with composite decking materials like Trex or Azek. Or PVC exterior trim replacement to eliminate future maintenance costs.

Chances are good that your friends and neighbors are some of our best clients. Maybe you already know our work. Why not visit our website to see how we have helped families like yours? Then text or call me at 908-285-8925 to tell us how we can be of help.

"Trusted. Local. Expert." That's what our clients say about us.

I look forward to hearing from you.

Sincerely yours,

Shep Greene
