## 9. *Metaphysical King*

Dimuniverse is a travel through time. Where time is justice for these collections of Philosophical thought. One for All, All for One; if and only if One knows best for what is All, and All knows best for One. The reasons to life, the length of life, morals one shall use, the different Metaphysical properties of life, the levels of Being, and the journey of Being are all discussed in these series of rushes of blood to the head of the reader. Relax, sit-up and enjoy a journey of unspoken areas of Truth and Enlightenment!

## *O: Infinities End?*

All my thoughts, all my writings, all my speech seem to correlate to one idea. They all seem to come, together to show me one thing. That the society that I currently live in, this energy based society of the United States of America is causing for nothing good, only wrongful tasks. It takes deep thought, and the understanding of the relativity of time (Einstein), and how energy moves. That *Homo sapiens* can not be doing good by using more energy, and taking the easy way out, in the long term, of the actions that we currently take in the year 2008 Common Error.

Let me try to put a picture into your head before we begin any further. Take any object and apply force to this object. What happens; this object moves at a direct relation to how much force you put upon it. Now you see the object moving. To keep this object moving at the same pace, you must apply again, the same amount of force onto this object at specific times on this objects

path. Gravity, on Earth, is 9.8 meters a second, so lets use 10 meters a second, as the base of how much force that is being applied to this object, to start it moving and to keep it moving. Lets say this object needs to have force applied to it every 10 seconds to keep it moving at the same rate, or 10 meters per second. So lets say that if you apply a force equal to 10 meters per second, every 10 seconds this object will then move for infinity. For the force being applied equals the force being resisted upon the same object. Or 1 equals 1.

Now lets stay with Earth, for it is easy for us all to imagine, for it is around us. So gravity on Earth, and time on Earth, is already being pushed at 10 meters a second. This allows for a wave of 90 percent of potential energy, and 10 percent kinetic energy being applied. This also means that 10 percent of knowledge is known and 90 percent of knowledge is still unknown. This is also known as this Universe has expanded 10 percent, with 90 percent to still expand, before it collapses onto it-self. If this shall continue on the same path, the consciences of Earth will last till the Sun

explodes. Then our consciences will be carried with the Sun's light to the next habitable planet.

But let me introduce an animal on Earth that does not move within the path of gravity. This species is known as *Homo sapiens*, or Human beings. They tend to want to move life at a faster pace, thinking by speeding it up that more knowledge will be available to them at a sooner time. For this is true for a while, until a breakpoint, or tangent, happens.

What is a break point? I thought this life would allow us to escape from the disaster that killed our genome before, or of the asteroid that killed us when we were dinosaurs. This lifestyle may have allowed us to escape the asteroid, but is it good in the long run. Does it have any other consequences?

The current economies of Christian societies have caused for the economy to become the number one factor in life. This energy driven economy uses more energy than the normal rate of 10 meters per second. It uses much more, but does that matter.

There is something called a tangent. A tangent is when, at one point, the line of energy, moves off track, and escapes the line of movement from the circle. Well, infinity is really two, or more, circles put together. When Human beings started to use more energy than given at one time, on Earth, a tangent began to occur.

So a tangent occurred. Well this tangent is on the infinity's track of time. The extra use of energy has caused for enough energy to become displaced; that Earth has already, the Universe is close, and time is catching up. Once time catches up, a tangent will occur. Not some simple line on paper, but of all time. If this energy based economy continues then, infinity will not occur, and we have made our death wish. This life has caused for Human beings to live an easy life, that without worry of food and water, but has in return caused for certain death upon consciences, Earth, and the Universe. For all of time will not just loop back in time, for this Universe will no longer collapse into itself; for time, this Universe will move off track and stop once the energy stops. Once this energy stops, all

will end. Not just this body, not just this moment, but also all will.

We have signed our own death penalty.

Everything runs on energy; from the electrons, protons, and neutrons of the atoms that make everything, till the star that powers your very existence, and the Universe(s). As of now I will say that this number is one on the energy scale. For it could be no more.

Yes, quantum numbers of energy exist. These numbers entail of the wave heights of the object that may pertain to this number. For colors correlate to these numbers, so therefore you must pertain these numbers to be real. For these numbers pertain only to color, or the height, and release of the amount of energy on the object. Quantum numbers are 0, 1, 2, 3, 4, 5, 6, 7, 8, 9. Where zero would indicate the most amount of reflection of the color, or more potential energy, or that all energy is available; where 9 would indicate no energy being reflected, or that there is no energy given off or much to be extracted. Yes oil and coal are black, for that is why they are used to power the energy of this society. Where the

colors in between; brown, red, orange, yellow, green, blue, violet, grey, and white are in order the lowest number to the highest.

Where the lower the number, the more energy given off, and the higher the number the more energy that remains. Therefore; everything moves from black to white, and then white to black, in their evolution(s) of time. Universally, this Universe moves from white, the big bang, or a white hole, till it reaches all energy being removed, or a black hole. This is why most of the Universe is black, for most of the energy of the universe has not been used within the expansion from the big bang. Many scientists, example given from 2008, have been saying that the Universe is expanding; maybe we are collapsing. For if it appears to be moving further away, could it just be moving faster, or maybe being sucked back together.

Together within a larger black hole, one that has the power to not just encompass 1 and 0, but every number in between, as saying two, three, four, five, six, seven, eight, and nine. Maybe what we really think is the beginning, relatively, is really the end. For maybe

the only reason we are able to reflect upon something is because it is nearing the end, or at least past the halfway point. For if this is true, then when is the end, and will it really be the end. For it cannot be the end, for you cannot destroy matter, just change the complexity; therefore changing the shape, color, and amount of energy imposed within the species. Also known as changing the quantum number. All of these numbers can be written as 0 and 1, actually every number imaginable can be written in 1 and 0, or binary code.

### *Solution*

We need to use renewable energy, of which I mean, that which is given to us by this Universe. The sun is the most, for it fuels this entire world. We can use the sun for energy, for it is the most abundant and efficient. We will still be taking away from that of which the Universe, and Earth is use to have. This will cause for

the weather to have less drastic changes, and cause for us all to be within the Sun and the Earth. It will still kill all of the other life on earth, well, that which is not climate controlled. But that is a human being is killing all of the other animals. Is that because they are just food, for us, the most dominate of all animals?

Clay is the only way to have many of the things that we now use plastic, and metal, for, which take energy to create without disturbing the balance of Karma within the world. Clay can be sun dried and it is also the most renewable material with enough to take care of our species. So that energy and many of the comforts are taken care of with today's standard of living.

As for entertainment, we have each other, and the beauty of this natural planet. Food, as long as taken care of right, as in rotations that allow for the nutrients to renew, is already okay. We will need to move to more vegetables though, for they take less energy to create, and give us more in return; compared to animals. Many more things need to be taken into affect, which time will

allow for us to change it all for the sustainability of time.

## **0.1: Fourier Analysis**

I am going to have a lot of speak of energy, light, sound, life, and other Metaphysical properties and dimensions of life. Most of what this will deal with is Physics and wavelengths. The easiest analytical person for these ideas may be Joseph Fourier, a French mathematician whom helped discover the Greenhouse Gas effect, which is now shown to cause Global Warming.

Energy, light, sounds, and life, all ride on a particle, anti-matter, which exists between the different molecules, which make up this Universe. The waves are a particle that exists, because of the attraction, and repulse, of the different polarities, or positive and negative, of the electrons and nuclei, to the molecules that surround the area. Where the most abundant molecule in this Universe is Hydrogen, and that most of everything, has a hydrogen atom's particles as some part of the matter, usually electron or the positive

particle, intervened within. This is not necessary for this subject today though. But as the particles are either, pushed along with positive, or retracted with negative, between the particles is a particle of space, which moves in a wave. This wave is energy, and this energy is the whole reason we are currently conscience.

There are different areas of a wave. The most basic are the wavelength: the antinodes, and the node. The node is the center between the individual waves. This is the part of the wave, which shows the relative time of the wave, and is the part closest to a line of 0, or in the middle of the wave. The wave itself, or the largest point of movement, is called as antinodes. This part of the wave shows the amount of kinetic energy exposed, by the wave height from the center, or the relative of time. More complex parts of the wave are the sine waves. They are smaller, or larger, amplitudes, or heights, and frequency, or lengths. If you were to study the more complex parts of the wave, you would be studying Fourier analysis.

Fourier analysis is that of the study and understanding, that

a wave has many parts to it, and that waves of different lengths, heights, frequency, and amplitudes, if moving in the same direction, may build within the largest sine wave, to become more complex and adding more memory into one moment of time. The largest sine wave, or the largest amplitude and length, will become the base. Within this base, smaller lengths, and heights, or amplitudes and frequencies, may fit on the wave. This adds to the wave without slowing it, but changing the composition, or the information, on the wave. Just think of seeing the side of a large rocky mountain, where the side is not perfectly up and down, like the largest sine waves would be, but have many small creases on the mountain. These creases give the mountain its beauty and help extend the time in which you look at it, in which you remember it and how often you think of it; of how much information you can have of it, but it does not take away how long it will stay at that place, for a larger wave has control of that.

# *1: Biotic Homo sapiens*

*Why is the Distinction between*

*Genotypes and Phenotypes important?*

I wonder at times of the how our changing the phenotypes in the world is influential to the genotypes and then, behavior of the genotypes that again influence the phenotypes. First thing that needs to be understood is that everything that I think of and everything I see are of being. Being of being, means that it is of an organism, and that this organism is then alive and has genotypes and phenotypes. For that a rock may be an organism and also the stars.

For I am able to come to this conclusion for the pure manner that it, such as humans, are made up of matter. This matter is in a shape of a double helix, and this double helix is made of matter, and this matter moves within the same motion of time. This matter, double helix, is present in everything known and will be known. This correlation of the equality of the double helix points

out that all is a live if all is part of the same time. Now that we have realized that all is of the same double helix, we may discuss more detailed information of the differences of genotypes and phenotypes.

A genotype is the base of the phenotype, which you will be able to observe the phenotype. In logical terms, the genotype is underneath the phenotypes, within all dimensions. A genotype is one in which the stored information from the activities of the organism has encountered before and after the given point in ones journey. This information is stored on a double helix, in which humans call DNA, DeoxyriboNucleic Acid, which, in humans, is stored with all of the blood cells within the being. Where blood is made of water, and water of hydrogen and oxygen, therefore I can confirm that DNA is stored within the hydrogen atoms of the being. By this conclusion I could include that this entire Universe is that of being and of an organism. To put it into mathematical terms, a genotype is that of negative one, for it is not within the sight of something that is within the realm of one, or of that of phenotypes,

but that it all has being.

Phenotypes are a much easier concept to understand. This would be that of all one sees, hears, feels, smells, tastes, speaks, moves and thinks. A phenotype is of what a normal consciousness comes within contact with. In human beings, one may classify that different humans have different skin color, size of feet, muscular strength, or intellectual power. One could also say that the trees and lakes that I see on the most real of days is that of a phenotype also. Phenotypes is that in which one is able to realize at their consciousness at any moment, or every within any moment of time.

I understand that changing of the phenotypes around me, as in cutting down a tree, or talking within a certain belief, is changing something that we may not be aware of. The changing of the phenotypes changes the genotypes. For everything has an equal yet opposite reaction, and that could mean changing from a positive to negative.

This shows how things may change due to Natural

Selection, or evolution. For when you have a group of flowers within a field, one group of white and one of red, the diffusion of the plants will change with time. For the bees, when they take food from the plants will move to the white plants before they will move to the red plants. For the white plants reflect more light to the bees, causing for the bees to move to the light. This movement to the lighter, white, plants will cause for the pollen of the white plants to spread faster, and reproduction to be faster of the white plants than the red plants. This cause of the phenotypes also changes the genotypes of the flowers and bees. For the genotype of the flower will change to where white would be more dominant and that red will be the less dominant. Within the bee colony the genotypes of the bees will change also, for the bees are going to the liked by white flowers more, because it is more comfortable, and this comfort will cause for the bees with the white flower pollen to succeed more and the bees will then have more dominant white flower tastes, as in a pleasant action.

Why the distinction of the differences between genotypes and phenotypes is important. The differences highlighted between phenotypes and genotypes, show how organisms have many layers to them. Positive one being that of the phenotype and negative one being that of the genotype are the layers. When you act upon the phenotype the genotype changes also. One also needs to understand that when one removes a phenotype from existence, then one also removes that genotype.

### *The Intellect Behind Homosexuality*

Many people tend to think that homosexuality is a mental disorder. But if you think that something is wrong; first look for intellect, then continue to enlightenment, or where you understand how your actions affect the things around you. Once one reaches intellect, they will understand that there are reasons to why every action, and thought, takes place. Homosexuality is just one human action that many are unaware of, and scared to try to understand. Afraid to be known as something different, or more evolved than

everyone else.

Charles Darwin states, in *The Origin of the Species*, on page seventy-nine, “I am strongly inclined to suspect that, both in the vegetable and animals kingdoms, and occasionally intercross with a distinct individual is a law of nature. Finally then, we may conclude that in many organic beings, a cross between two individuals is an obvious necessity for each birth; in many others it occurs perhaps only at long intervals; but in none, as I suspect can self-fertilization go on for perpetuity.” For here he relates that animal and vegetable kingdoms have corresponding sexual activity.

On pages seventy-five and seventy-eight, Darwin, discusses *the intercrossing of individuals*. “When the sexes are separated, although the male and female flowers may be produced on the same tree, we can see that pollen must be regularly carried from flower to flower.” In human terms, this would mean that humans from the same town, tree, must have their pollen, sexual desires, carried to another human. Charles Darwin goes on stating

that birds and bees [get it “the birds and the bees,”] carry the pollen to other plants, even though they may be of the same sex. For it still gives the individual a better chance of survival. Where the only true survival is that of a male and female fertilization process.

This concludes that not only the vegetable kingdom, but also the animal kingdoms must have sexual relations to carry on the species. Individuals must get rid of the pollen, sexual desires, in order for their cycle of life to continue. This may occur with any individual, of the same species: whether that may be of the opposite sex; sexual behavior, the similar sex; homosexual behavior, or of the individual; hermaphrodite behavior. Hermaphrodite behaviors include masturbating. *Homo sapiens*, being of the animal kingdom, need to get rid of their desires, in order to live a healthy life. If an individual of the opposite sex is not around, or if they are still effectuated with their mother or father, in the Oedipus complex, they may have homosexual relations, for it allows for the individual to release their desires to another individual of the species without

having procreation occurring. Once procreation is wanted, or available, will then heterosexual relations become. Let the individual follow the path that occurs, do not loath on someone because they are happier than you. Be happy and love life.

The only way to truly be happy is to see one reproduce, or create, or to be the recreater. The being of a recreater within both the animal and vegetable kingdoms' are when the pollen, sexual desires, or seed of the tree of life are transported into a similar organism as in which they originated from, but they will need to grow, and carry on the time in which they are alive. This is present when being in a sexual such stimulating behavior as with the opposite, yet equal, organism in a heterosexual behavior. Only when these two forces meet, do they create a carrying on of time. This is also seen in nuclear fusion such as in when in hydrogen when the fusion will last forever.

*Super Organisms;*

## *Honey Bees' Colonies*

### Why?

When one starts with why, one must first understand how it works before you can ask why it works, or why this Universe, or the bee colony, may be classified as a super organism. The it, in which I am speaking of, is the Honey Bees', *Apis mellifera*, colony, or the beehive. I think of the beehive, or the comb shape does not just relate to the super organism of the colony, but also of the super organism of the multiple universal dimensions in which all is composed of, or Dimuniverse.

The bee colony may be considered a super organism, or also the shape of the cosmos. A super organism, or cosmos, would be of genotypical and phenotypical traits all consumed to the energy of one collective mass, in order to allow for the mass to reproduce. This reproduction is why the mass would be multi-dimensional. Cosmos is a Greek word in which means the organization of a living thing.

Within a bee colony many objectives need to be fulfilled, in order, for the super organism to survive. I will be using the beehive and super organism, interchangeably for this. These include many traits in which human's themselves interact within their everyday lives. These traits are also considered to be jobs or being. These jobs include, hunters, gathers, shelter builders, and reproductive responsibilities.

The hunters are also known as the guardians, and these bees would be the largest and most courageous of individuals. Their phenotype of matter would be of the strongest of bees. Their moral level would be at one of the colony and no further. For if the soldier, guardian bees, would have morals other than for that of the colony, they would not protect the colony against invading predators, for something else would be of more importance to them. This could also be seen as a phenotype of behavior. Which would be derived from the genotypes that in which the Queen Bee, or the unmoved mover, has laid that bee's chromosomes to be.

Gathers are also another job of certain bees. Gathering bees would be the bees in which are seen the most. For these are the honeybees that collect the pollen to create the honey within the hive. These bees are the most essential bees, for if there would be no honey, there would be no honey bees, but one could pronounce that the honey bee would have evolved into another species of the *Crabronidae*, bee, family if they were not able to eat pollen. Where the bee would then kill other insects for food, instead of pollen. Basically bees use pollen, or fusion, instead of other insects, or fission. The phenotypes of the gathers would be, physically; smaller, faster, yet able to carry a lot of weight, psychologically; gathers would be at a moral level of needs of new information, for they only complete that task but then see so much that they are able to wonder about the outside world for more food. Gathers are the most important to the super organism's survival. Gathers would almost be like a person is to people. With human people, these would be the scientist and the stars.

A bees' job would be of a builder in some cases. The builders help maintain and keep the hive, or honey combs, alive and strong. They keep moving the resources available around in order to allow for the structure to change and adapt as time moves on. These bees would be able to see the world in a clear, shape, and sense more than the other bees would. Their moral level would be at one of the colony, and keeping that colony around. The phenotypes of physical parts are of strong and long arms that would have been adapted to the builder bees throughout natural selection of the different generations.

Another one of the bees' jobs would be that of the nurse bee. These bees are very important in the renewal of new, further evolved, bee larva. The question is though, would one want for the bees to keep evolving, or would one want for it all to stop at a certain point in time, even though points don't exist. Within the cycle of life, one must evolve with time. The nurse bees watch over the nursery of the new larva and make sure they are feed and ready

to grow as time moves on. Their moral phenotype would be that of youth. Their physical phenotypes would be one of a smaller bee, where mobility is the most important thing.

Cleaners are the lowest on the totem pole, but not the first to be dismissed. Cleaning bees help keep the larva, and honey sickle clean and ready for movement throughout the super organism. They would have a moral phenotype of basics and needs. For they do nothing but clean, and have no other purpose. Their physical phenotypes would be one of a smaller, quicker bee, for, like the nurse bees, moving around quickly is the most important thing.

Drones are the second most enjoyable of all of the bees' jobs within the beehive. For all drones are needed for is reproduction of future bees. They are the first to be dismissed thought, for the other bees are also able to reproduce with the Queen. Their phenotype of morals would be that of love, for all they do is make love. Their physical phenotypes would be of a more developed reproduction system and then the median physical

parts for all else.

The Queen Bee is the most enjoyable of all jobs. For the Queen just doesn't send out the communication, or waves of information, just like a language to the worker bees. These waves of information are transported throughout the hive from antenna to antenna to the different bees, informing them of the time in which it is, so the bees are able to complete their jobs. These are known as pheromones, and are different genotypes, or encodings of different amounts of energy, but are more often seen as phenotypes or the behavior that becomes from the communication. The Queen bee also produces all of the eggs for new bees for the colony. This would be enjoyable, quiet enlightening actually, for one would just watch oneself create all of time.

The super organism, also known as a beehive, has many correlations to human behaviors and human governments. The jobs listed above are all completed by different humans within their governing nations for the survival of their economical nation. Each

of the jobs is important to the survival of the beehive and the species, and thus correlates to the human species also.

## *2: Ecstasy if Up*

Pre-Operational thought is a discussion on the cognitive evolution of the two to six year olds' mind. Pre-operational thoughts are the basic steps that the child develops into. Egocentrism, centration, focus on appearance, static reasoning, irreversibility and lack of conservation are the six steps to the evolution of pre-operational thought. In other words, a child that is around four, given the median, would think that the world is only what they see and that they can only focus on one thing. They think something that is taller must be older, that the events in their world

don't have consequences, everything is the same no matter what you do to it and that the world never changes. Does this sound familiar?

Don't most human civilizations in history have this same perception, even the United States of America. We think that Earth and its life is the most important thing because it is all that we know is out there, that other races are not the same as the white man because they look differently. Those human beings are the most intelligent animals, therefore the most important. We also assume that we can tear up the Earth and it is still the same even though it looks a lot different, with our huge cities. That polluting the air and killing all of the animals will never have any consequences. Also that the Earth is never changing or that we can never change it. With our overpopulation we defiantly have changed the Earth, does it look like a huge garden like it originally was? To me it seems as most humans do not evolve from this pre-operational thought, but that we are just taught that the Earth is big.

*“The Fight”*

A lion king and lioness meet for a private, one on one, with an excitement and nervousness of the events to occur. Each individual knowing that the other person and themselves want to be here. This may be one of the first times they have meet, but each are aware of the chemical reaction within the air, and between the two of them.

Sitting and talking hours on hours, about which person each other are. Helping each other continue on the levels of Maslow’s Hierarchy of life, liberty and ecstasy. While speaking to each other, they both come to realizations of one and the other in which neither were aware of before. Each helping the other to levels upon the ladder of needs and wants that one or the more important of what they want. The lions move within circles of each other, mocking every move, as if they were on the same channel.

The lion king and lioness sit in their one on one.

Butterflies within the stomach, pupils expanded with attraction, and an overwhelming want of the other. Both feel this, both know this, both see this and act. A seductive hour of intense play begins. “The kiss” not to be forgotten, for the first lip lock was unlike one each other have felt in a while, if not ever. A subconscious desire of each other moves to action when each other move in for “the kiss.” As they touch a gentle kiss at first, and then a spark of energy from one lip to the other. A spark that is only heard of in movies, but that has morphed it’s way into real life. The kiss moves on further into action, where the intensity only grows as time moves its distance. Stares in each other’s eyes like lovers trying to get as deep into each other’s souls as possible. Stares of a lioness reach deep into that of the lion king, as the lion king’s stares reach equally the distance into the lioness’ soul. Excitement and screams from the lioness roar as the lion king releases his soul onto the lioness. The known excitement echoing, within each other’s souls, as a pure ecstasy within life that has now been caught in this web of love.

Where do they go from here?

Life, liberty, and ecstasy!

*Emotions in Deception and Self-Deception;*

*Their role within the Evolutionary Process*

*Emotions*

Before one is able to speak of the differences between the deceptions of emotions, one must be aware of what emotions are.

There are two basic levels of emotions; ups and downs. Ups are the moments within ones time, where myelin on the axons of the brain are moving at a faster rate than an average. Ups are noticeable within ones life when the one is feeling excited, happy, glad, sexually aroused, or moving quickly.

How Emotions Change

Moving quickly one may ask. Ups are really when an organism is moving faster through the organism in which one is present. These ups are also called gravity forces. When one is

introduced to a more kinetic energy, one is considered aroused.

When one is considered aroused, one is considered up. Therefore when one is feeling up, one is being introduced to more kinetic energy.

Kinetic energy is when a force is being applied in which takes away from the potential that the energy is able to produce and move at a faster rate, or one that would be considered closer to the speed of light. Within the brain, the kinetic energy is noticeable on the electrical synapses, where the gaps between one neuron and the next neuron are closer together than the average. The more protein that is attached to the myelin sheath, the faster the connection can be diffused from one end, positive, to the other end, negative, of the axon. This is because protein is composed largely of hydrogen atoms, and the bonding between hydrogen atoms is easily changed through nuclear fusion and fission, for the bonds are weakly attached. The more fusion, or protein, the more often hydrogen bonds will be taking place and the more likely that the being would

be up. If one is up at all times, one will be able to proclaim that one is able to have free will. For one will be able to have easier changes to the environment in which they are exposed to. This look of free will begins to put it into perspective of how it is merely the most *efficient* method or way of life that wins and therefore becomes evolved.

Downs are also an emotion in which life is composed of. Downs tend to be times in which things move slower. This would be for the opposite reasons of the ups within life. The health of the organism has a lot to do with the causes of downs. For when an organism is in less health, or when the axons of the brain have less protein within the myelin sheath of the myelin between the synapses, the energy in which is consciousness is unable to move from one side, positive, to the other side, negative, quick or efficient enough. This lack in efficiency does not allow for the frontal lobe, in which directs emotions, to become aware of the outside reception factors in which help determine factors of the environment, in order

to determine emotions in a factor of time, in which would cause for one to be up, therefore one would be down. One is able to have less fluctuation between being up and down if one would get sufficient protein and other calories in order to repair the axons, mainly that of the myelin sheath. A lack in protein would cause for one to act and feel as if one is down.

As with deception and self-deception, health is again a major factor. For if one is healthier; one can see, feel, hear, taste, smell, and reflect at a much faster and clearer manor. Such as one will see people as incumbent for they follow the leader, where people would see one as intelligent, for they are the leader. Where the leader is just in better physical, therefore emotional, shape than the people in which they lead.

### *Environmental Factors of Emotions*

#### *Why Not?*

I see it that only the health of a being determines the emotional state of the being, many think that the environment has

much to do with the emotions that one feels within ones time. Some think that gather's are the happiest, for they have the most amount of energy. For this is true, but it is not that one is a gather that makes them act up. It is the shape in which one poses their being, as in body, to be. The better shape the brain, and body, the faster the energy moves a long the myelin to the synapses and a release of energy and chemicals are able to take place within the synapse gap. The more efficient this process takes place, the better shape the person will be, and the more that this person would be able to achieve within a life. Making this person become a gather from being active from the efficiency in which one is able to take part of.

*Why?*

Since people believe their environment affects their emotions, for they are just looking at the lights and sounds of the screen, one must speak of the ways in which the environment will affect one. There are three types of synapse receptors in which have an effect on the brain from the environment. These are the

mechanoreceptor, chemoreceptor, and photoreceptors. The mechanoreceptors are affected from the feeling and hearing wavelengths and wave-heights. The chemoreceptor is affected from the taste and smell chemicals within the environment. Where photoreceptors are affected by the light wave-heights and wavelengths.

Mechanoreceptors are within the sensory homunculus, just as with the chemoreceptor. The sensory homunculus is located within the parietal lobe, located in the back of the brain, directly above the occipital lobe. The mechanoreceptors take the senses, feel and hearing, and transfer the energy from the world around one and cause for the body to move accordingly to the surrounding environment. Such as people are attracted to red, faster than blue, or to something shiny faster rather than something dull. This is because they are only aware of the light, but do not know how it affects them.

The chemoreceptor, also within the parietal lobe, has a

reaction from the hormones that surround a being. This has a lot to do with love and the reasons for such. If one has a similar built parietal lobe, from being introduced to similar chemicals, hormones, and lights and sounds, one will find them equality within another person. This reaction is called love and can change one to a person and back to people.

The Photoreceptors are within the occipital lobe, in the back of the brain. This has an equal yet opposite direction within the feed. For something is staged on the left, but sent to the right, and vice versa. This is a reason for a lot of the confusion that people have on the world. For how can up be down, left be right, and right be wrong? For it is how your perceptions interrupt the information for the environment. Only when one is able to reflect on life, is one able to determine what is right and what is wrong. Reflection, or dreams, is when the energy in which is up loaded all throughout one day, then becomes downloaded into ones perception of reality.

### *Evolutionary Adaptations*

When one is introduced to any chemical, light beam, or amount of kinetic energy for any given time, a change occurs. This change is in relation to evolutionary adaptations. Such as if one is in contact with one person for a long period of time, such as living within the same household, one will begin to not notice, or diffuse within the same hormonal connections. This causes for woman to have the same time in which their hormonal release of eggs, to occur during the same period. Also known as menstrual-cycle or period. One may also notice a change through the movement in which one acts. If people are introduced to a shiny red sign and a dull blue sign, the red sign would get much more attention and therefore more action will be taken towards the red light. This is a way in which one would cause for the masses to change the being in which they are.

### **3. White Warning**

#### *Global Warming*

There have been many scientists, without any affiliation of race, religion, gender or political party, which have stated and proven that the way we are using our oil and other natural gasses to power our First World county is inducing too much Carbon Dioxide into our atmosphere. This burning of CO<sub>2</sub>, Carbon Dioxide, is causing our atmosphere to warm up at a non-natural rate. Yes, our Earth, the larger organism that we live in, and our conscious at a higher level does naturally warm and cool it, with the changing of the polarity of the planet but the warming that we are causing ourselves is unnatural and dangerous!

We, as human beings, *Homo sapiens*, mainly of the country United States of America and the phenotype Christianity, have always hated the way we are so materialistic, but we keep killing ourselves, for we are aware that this cannot be true without

consequences. We just enslave the molecules of ourselves, and the Earth. Basically the human race is in nonobservance of the thirteenth amendment of the Constitution of the United States of America by causing a metaphysically reincarnation of the molecules that make up the planet to become the materials that make up the artificial world that humans live in today. Global warming is just one of the many consequences of this behavior that human beings portray upon themselves.

Once the effects of Al Gore's theory of Global Warming start to take place, and it is finally reached upon the conscious of the non-enlightened or intellectual human beings, many things will be changing and will to change. Starting on a psychological level, the people of the first world nations will be filled with anxiety and depression. Mass murders will be committed, on the defense of necessity, to live a lifestyle that the middle classes were always occupied with. For the middle classes were so dependent on the Earth's blood, oil, and all of the advantages that this liquid has given

to the human race. Including fuel, plastic and fertilizer for the fields of their food.

On an economical level, the prices of all energy substances, mainly that of oil, natural gas and coal will skyrocket, metaphorically speaking, to a level that only the elite in the world will be able to purchase such items. The reason these items will be more expensive, is not just for the normal reason of less supply, which there will be of but for the mere reason that human's will start to become enlightened that we are really the Earth and that we cannot be destroying ourselves, like a disease. The owners of the oil companies will try to have a bank account large enough so that they will be able to leave this planet, which would be dying, to a state such as Venus, take a stop at Mars to fill up on oil, and then continue on their way to the nearest inhabitable rock in space. These devils will then be able to spread the human disease to another planet, or organ, within the organism, Universe. While on Earth all of the middle and lower class inhabitants will be trapped in

a like hell state.

Hell is this! The atmosphere of the planet will diffuse at a much quicker rate, causing for faster winds and stronger storms. The tides will also rise to a higher level, for the ice caps will melt. The caps will melt for the extra carbon molecules will need more to be stable and the hydrogen, nitrogen and oxygen will attach itself, causing a more dense atmosphere. The denser a mass, the atmosphere, the faster the fusion and fission occur therefore; the warmer the mass. Most of the population will be terminated during these two events. The ones whom are strong enough to live through these events will then be faced with a decision to make; end it quick with a nuclear winter and become dead and remembering; fight it out and with any remaining life on Earth wait to become a dinosaur again and hope to become the stars before the devils marching throughout the Universe destroy it all; or become one with the computers, whom will have artificial intelligence by this time and try to fight the devil humans in space. All within the next hundred

years, why yes, for we already have this knowledge and technology at least in development.

*Is it Hell*

Global warming is the greatest thing that human being's have ever been faced with, when it comes to morals. In a Associated Press article the developing nations such as China are arguing that the developed nations should pay for the Global Warming and the process of trying to cure this. The article states that China will soon, or, has bypassed the United States of America for the number one contributor to Global Warming. This may be true for the United States has only 350 million individuals in their culture while China currently consists of almost four times that of 1.2 billion individuals. If the average Chinese individual would like to a life half as abundant as the average American then they will surpass the United States very quickly. Since they are a developing nation and not one as rich as the United States, China also does not have the technology to have as efficient of machines to work for the

individuals.

A surprise is China is trying to develop. For they are a communist country and therefore every individual in the nation is as rich as the next one. Also communism is an extreme left winged country and should believe that the technology that comes along with developing nations de-evolves the individuals and makes the individuals more reliant on technology and the government. For the United States has already reached this point in time and therefore will crumble as time moves on. For the team, nation, is only as strong as the individuals that it consists of and the more technology is imposed the weaker the individuals become and therefore the stronger the nation may become within the culture but the weaker the culture will become within the ecology.

The United States government has been a strong phenotype for so long and therefore disruptive selection has allowed for the culture to become strong. The diversity of the individuals has made directional selection to allow for the nation to develop into the

strongest, richest nation ever in human kind. But now stabilizing selection is beginning to occur and the resources that the United States has built on and the slavery upon which these resources have been used for are now being challenged by new cultures. Cultures of great size but not equal diversity therefore the United States will win this war of the resources of Global Warming and the riches that become from it.

This resource is oil or fossil fuels. Fossil fuels are the degraded remains of past life on this earth. Use of these past carbon lives is causing for the carbon molecules to become released into the atmosphere and to raise the amount of reactions of hydrogen atoms that stick to these atoms causing the temperature to warm up. The differences in the hydrogen atoms change cause the wind differences or differences in the concentration of the positive and negative atoms in diffusion. Diffusion is the movement of particles from a negative to a positive concentration. The rise in the diffusion rates is one of the ways the earth's environment is beginning to fight

back. Causing more drastic winds, higher temperatures, and greater climate shifts.

Different cultures of the similar species, for the fight over a resource are that of the fight of the earth's powers. As the earth is already showing with Global Warming and the drastic changes within the changes of the differences of the negative and positive hydrogen atomic particles within the atmosphere. Human beings are overpopulated and use too much of the ecology of the earth to live on this planet in its current ecology. The price of mass intelligence is the degrading of the minds of human's instincts of an animal and they are slowly moving into what would be hell. Hell would be not being able to live on any instincts as a human being, but just living by the way other humans or computers train your mind and body to work. A human being in hell would be stuck like a caged animal, which human beings do to many species upon this earth. With comfort become many sacrifices; these sacrifices are the freedoms to live as an animal. Technology comes with comfort and again is

putting human beings into hell.

In order for human beings to not be encaged in a hell, technology must stop. Global warming will be cured and the developed nations should pay. The United States of America, Germany, Japan and Australia should not be the only cultures of the species *Homo sapiens* to pay but all developed and developing nations must pay. Just because the developing nations are not developed yet or do not have the money and greed that come from developed nations does not mean they should not pay. The developing nations should not be allowed to become too developed, or develop at all. The developed nations shall reconsider what is important and need to de-industrialize in order to not cause too much chaos once oil prices rise so high that all of the slavery from the machines will finally stop and their de-evolved minds will not be able to think of how to live without their servant to help them live. If all human beings were able to look outside of the box they live in, and notice what their actions do upon this earth they will be able

to see that this is good for not just themselves but for all of humankind, for the earth and for the universe. Before humans spread to another organism, planet, within this universe they must stop the greed and shortcomings. If free will exists it needs to take action, if not then I'm sorry but the earth may but *Homo sapiens* will become extinct within their own demise.

*"The Color of Justice; Race and, Ethnicity and, Crime in America"*

*Samuel Walker, Cassia Spohn, and Miriam DeLone*

- 1) Behavioral Differences Between the Phenotypes based on the density of the Genotypic Body:
  - a) African American's the densest phenotypes,
  - b) Indian American's next closest,
  - c) Hispanic American's follow closely, Lighter Hispanics less dense, darker Hispanics, more dense.
  - d) Asian American's are the fourth,
  - e) Caucasian American's are the least dense of the Ethnicity as a Phenotype.
- 2) The Darker the Phenotypes of skin the Newer the Genotype;
  - a) Darker Phenotype is the newest one to evolve from the Chimpanzee in the Rainforests of the World,
  - b) Lighter Phenotypes have been removed from the Chimpanzee the longest.
  - c) Allows for the species consciences to be longer. More Memory storage helps the species feel more remorse of

- their actions. This causes for the Genotype to act more to be more true to the cycle of Natural Life.
- 3) Knowledge's affects over the individual;
    - a) More aware of the environment's affect on them. Causing for more abundant mood swings,
    - b) Knowledge of how they affect the environment around them and, a better feeling of how they affect the environment,
    - c) The denser the Genotype the more of an affect it will have on the environment around them. Such as; more of a gravity pull on the surrounding environment,
    - d) More enlightened individuals, the denser the Phenotype,
    - e) The more affects that become from the environment on the denser Phenotypes.
  - 4) Crime Ratings;
    - a) African American's with most crime,
    - b) Indian American's the second most,
    - c) Hispanic American's follow,
    - d) With Asian and Caucasian American's following in forth and fifth.

### *Black or White*

Race, ethnicity, and socioeconomic status are the most common, conservative views to why crime may occur. They are not always the correct views, but they do have a lot of support to the stereotypes. The support to the conservative differences includes many liberal ideas. There are biological differences between the

different genotypes, within the *Homo sapiens* race, play a role within the behavior differences between the phenotypes. Genotype is the collection, over time, of genes of an individual within a species. The phenotype is the expressed genes within the individual. These expressions can be skin color, hair color, personality, and levels of success of an individual (Campbell, Reese, Taylor, and Simon 2006).

There are also philosophical differences, or levels of hierarchy, between the differences in behavior (Soccio 2004), and the social economical status, SES, between the bourgeois and the proletarians (Walker, Spohn, and DeLone 2006). Statistics also show that there are differences between the phenotypes within the race, whether the SES is similar or drastically different.

Biologically, philosophically, and psychologically, there are reasons showing that the stereotypes set are for reasons. For crimes that are reported within developed societies are because of the differences, but that this shall not be proclaimed upon every individual organism

that have these genotype and phenotype differences within the species *Homo sapiens* (Conklin 2007).

The biological differences between the different phenotypes and genotypes, within the species *Homo sapiens*, are seen visually from other organisms within the species, but these phenotypes and genotypes play large roles in the differences within behavior within the same species. The different genotypes acknowledged include, shown as of phenotypes from darkest to lightest, African American's, Native American's, darker Hispanic American's, lighter Hispanic American's, and Caucasians. Each of these genotypes have different backgrounds to depict the behavioral traits that may become concluded from the specific being of the species (Campbell, et al 2006). Hispanic American's tend to be more family oriented, even today and with wealth, compared to other genotypes such as Caucasian Americans who are more independent, African American's who are afraid of police brutality, and Native American's, which have their own policing systems.

(Walker, et al 2006). Native American's policing force are within their tribes. Some are operated by the Bureau of Indian Affairs, some operated and funded within the tribe, others operated by the tribe under the 1994 Indian Self-Determination Act, while some are still policed by the State and local police.

This fight for resources can include many crimes within today's conservative government, as with larger organized behaviors such as war, it is all about trying to live. These crimes include murder, a 6:1 ratio; rape a 3:1 ratio; robbery 7:5 ratio; and burglary a 4:2 ratio (Conklin 2007). All of these ratios are based on the differences of the phenotypes darkest and whitest, or the genotypes African American's to Caucasian Americans (Walker, et al 2006). Every one of these crimes before mentioned is based on natural behaviors to sustain energy. With the extra kinetic energy of the darker phenotypes they must act upon a greater level of energy in order to still move within time and to not just stand still within time (Hewitt 2005). For every object wants to conserve energy, but with

this search for knowledge human beings wants to elicit as much energy, as possible for search of what is true. Since Christianity brought the darkest phenotypes to the Americas they will, if unenlightened, continue on this search of knowledge and try to conserve their energy but using that of everything around them. Since they are naturally better at conserving energy they will be able to achieve success within a Christian society if given the opportunity to achieve such success and not being enlightened of the consequences of these actions (Soccio 2004).

For the more resources allowed to the different phenotypes, meaning the more energy that is able to become of these phenotypes, the closer the statistics show how the crime ratio's become closer till they are almost none existent if any species would become of a bourgeoisie status, or have enough money that many generations will have no stress over the fight of resources to conserve energy (Campbell, et al 2006). Until the genotype reaches that level of Hierarchy, according to Abraham Maslow, the ratios

widen more based on the amount of education and resources available to them. These levels of Hierarchy are physiological – health – safety – resources - love – family - esteem – confidence -and self-actualization which is acceptance of oneself and facts of the world (Soccio 2004). Where the less the amount of resources the more crime that is involved. Caucasians, Asian American, Hispanics, African Americans, and American Indians are in order based on population, of the amount of money, per capita, that each phenotype makes within America (Walker, et al 2006; Conklin 2007). Their percentage of crime rates are then an equal ratio in the amount of population and the SES of the genotype within the United States of America today.

The socio economic status, and the phenotype of the individual of the species *Homo sapiens*, both reflect the level of crime that is committed within the species. Where the higher the SES the lower the crime rate, and the darker, and newer, the community the higher the crime rate within modern society. They

will both tend to level each other out if they were all the same, but the different phenotypes will take a while to evolve to the same status of human being or genotypical age of the individual, and the SES will never be the same as long as money is power. For money, and the power to conserve enough energy to live an equal lifetime, will become of more education and equality, or power being controlled by a darker, newer, phenotype of the species *Homo sapiens*.

### *Enslaved Lives*

Hello my name is John Smith and I am an American. Today I am in Paris, France and am sitting in the airport to catch a plane. I have to take a flight to Tokyo, Japan for a meeting in the morning. I make over \$300,000 a year and live the American dream. But right now I'm sitting in my \$5,000 suit and talking on my \$1,000 cellular phone to my wife who I miss very dearly. When I get off the phone I want to listen to my mp3 music player so I can relax. As I look at my \$15,000 watch to check the

time; it is 6:30 a.m. I do not want to miss my plane and need to leave early because of all the extra security after the 9/11 attacks. While waiting, I get a phone call and am now talking to the CEO, or the Corporate Executive Officer, of the company I work for. While on the phone I get another call from Pat, a competing company that has been giving me job offers. The world never seems to stop. I stuff in my laptop and close my \$1,500 brief case and migrate on my way toward the plane while I turn on my ear piece so I can still hear the conversation from my boss. I have a ten-hour flight ahead of me, at least I can sleep, until I land in Tokyo then get three more hours of sleep and wake up for a meeting that could lose or gain a billion dollars for my employer, an international corporation.

Then I finally get to go home, after a month in a plane around the world, to a condo in New York City and a vacation house in Hampton, New York that I own. I get to drive my high-end luxury sedan as my gorgeous wife drives a large sports utility vehicle. In that huge sport utility vehicle, my wife drives our two

children to school and football practice everyday on her lunch break from her corporate job. I have been fortunate enough to already have money to pay for my kids schooling and just started trust funds for them. Luckily I still have a while till they are eighteen and can get the money out, because they are only six and eight. The only thing is I have three credit cards and each of them have a least \$2,000 of debt on them, plus my mortgages and my car loans, I'm really in the whole a million dollars and am working just to pay off my debt. If this American society is a consumer driven society that is slowing causing all of the citizens to obesity, manic, and into so much stress that it is now the leading cause of death because work consumes our lives and family becomes almost a secondary worry on everybody's way to the American dream, is it really worth it. I ask myself all of the time while missing my family and causing me to become lonely because I know what I really want is at home.

I am only thirty-five but I feel as I am in my fifties. I am tired, stressed, depressed, and lonely. I live on cigarettes, fast food,

and fast coffee. But mainly I miss my wife and kids. I am like the average American works over an average forty-five hours a week or about 100,000 hours of work in my life. But I'm living the American dream and we have everything I ever wanted; a nice car, good cloths, a vacation house, a lot of flat screen high-definition televisions and a huge saving account.

This is what America, and the American dream, is today: A twenty-four hour a day, seven day a week work schedule. You have to be willing to sacrifice it all to get to the top. John Smith is an example of a college-educated man trying his best to have the American dream and live his life the best he initially thought it could be lived.

The United States of America is the richest and most powerful country in the world, no doubt, but we are running ourselves into depression and exhaustion. With our long work hours and material's make me happy attitude that we believe, we have become a bunch of people living in a manic state of mind. Mania is

a disorder where high energy and overconfidence occur and the mind is in a frenzy state and the body loses sleep and thought is not always clear. (American Mania) This disorder is a part of Manic Depression, or more commonly know as Bi-Polar disease.

American's might not be at fault of this, through research scientist have found that an enzyme might be the reason that Americans have the need to always be better and be willing to do what ever is possible to achieve this impossible dream. The psychological effects of all of this mania can drive a man crazy, figuratively and seriously.

The United States has created a power so strong that the Roman and Egyptian empires combined did not have the military power or the wealth that we have today. We have also grown faster and stronger in the shortest amount of time, in less then 230 years we have created something that may never be matched in the human race, and it has not been so far in our two-hundred million year existence.

The last twenty-five years has seen the fastest development in human history. The Information Age is upon us and is going to last for a while. The inventions of the telephone and electricity were very important but the inventions of the silicon chip and the internet have taken human existence to a whole new level. The human existence is at a pace faster than ever before, we can now see a live television broadcast from Antarctica on our cell phone while riding a train going over 200 miles per hour in Germany. Simultaneously we can be searching the internet on your wireless laptop computers; checking e-mail, stocks or making a decision that can affect thousands or millions of people. The world today is at a chaotic level, compared to twenty years ago.

Communications went from by foot and horse two-hundred years ago, which it could take a week for a post card to get from Lancaster, Pennsylvania to Philadelphia, Pennsylvania depending on the weather, to now where we can send a post card to Rome in a second or the time it takes an electrical signal to travel the speed of

light to a satellite in space and back to Rome. We now live in a “Global Community” where your next door neighbor is sometimes harder to get a hold of than the guy in London that you talk to about your European market stocks. Decisions made all over the world now affect everyone else in the world immediately instead. Our economical markets are interacting with each other like never before. There is more trading between countries and borrowing from other countries than ever before. This causes global markets that affect everyone in the world. Global markets are making every country a little richer with the United States of America leading it all, with the most amount of wealth and world trade. The ease of communications is one reason the pace of today’s world is at an all time frantic level.

These advancements made by Americans might not just be a society of people wanting better but a society of people that have a physical enzyme telling us to push ourselves to the limit and improve our lives. Scientists have found an enzyme in the human

brain that relates directly to how adventurous or conservative a person is. They believe that it relates to the human impulses of survival and whether a person will be adventurous and travel to survive or if they will choose to stay where they are and adapt. This enzyme is called D4-7 allele. D4-7 is part of the dopamine receptor system. Dopamine is the chemical in your brain that is released to tell your mind that you are feeling pleasure. The D4-7 allele enzyme is not common in most humans though; the D4-4 enzyme is most common and is associated with humans that are more on the shy and less adventurous side. The D4-7 enzyme is found more in humans that have traveled and are more outgoing, as a race and as an individual. The humans that stayed closest to the Rift Valley in Africa, where humans first evolved into Homo sapiens, have no D4-7 present in their mind. The further you travel from the Rift Valley the more common that D4-7 becomes present. African tribes have very little presence of the D4-7 allele, while Middle Eastern cultures have more, but still very few and it is on more of a personal

bias. Asian cultures have more D4-7 present than Middle Eastern cultures but again still depend on more of a personal bias. The culture that has the most amount of the D4-7 allele enzyme is, not by surprise, North and South America. United States shows the most amount of the D4-7 enzyme present in the common public than any other culture in the World. Think about it, we are all emigrants and have traveled to the Americas by rough sea less than 500 years ago. When American's arrived in the New World we had to map all new land and build houses out of scrap materials. We are foremost adventurers in the history of human kind. We risk our lives everyday for fun more than ever before; skydiving, bungee jumping and driving in New York City. Even though are a manic society, this may be caused by a physical enzyme it still causes psychological problems.

Stress, depression, anxiety and mania are all words that are used in common usage today. They never used to be and should not be in common usage. The reason they are in common usage is

because they are diseases that the average American suffers from. At a higher rate than ever before American's are dying from stress related sicknesses such as cancer, heart attacks and strokes. These three illnesses are three of the largest causes of death today and a lot of the cause is today's society. Working an average of forty-five hours a week and the rest of the average American's time devoted to ways to make work easier or finishing work they didn't complete. (Hours of Work in US)

This leaves very little time for recreational and relaxation time. It does not help either that the average American has to travel an average of one hour a day to go to work and back home. Most of America is so wrapped up into their work they do not ever take a vacation, or at least one more than five days off consecutively. Vacation is a word not used very often in today's corporate world. It is almost a bad word for most American's. The average person gets at least two weeks of vacation but very few use it all. They fear that they are disposable because everything will be okay once they

go back, but I think it is mainly because in today's society you are your work. Our lives revolve around our work. One of the first questions you ask someone when you meet them at a bar is "What do you do?" (CNN) The lack of vacation, the long work hours, our loyalty and obsession with our job and the heavy traveling just to go to work helps cause stress, depression, anxiety and mania.

Diseases such as GAD, or General Anxiety Disorder, and Clinical Depression are two of the most common diseases in America today. GAD is a disorder that causes the mind to become overwhelmed with thoughts of your normal everyday activities and other things that may bother you, such as loss of a loved one. It is caused when the amount of stressful activities of the day acuminates with lack of sleep and stress relieving activities, such as reading or listening to music, diminishing causes stress to be more prone and anxiety develops. Medicines can help with the severity of the anxiety but cognitive training is really needed to help the patient fully. Clinical depression is the most commonly medicated disease

in America today. Clinical depression is a result from an interrupted dopamine passage in the brain. Many medicines also help his disease, but the social-psychological reasons for this disease are ones that need help. The massive job changing in America, excessive work hours, lack of sleep, lack of relaxation and vacation, and social stratification are all causes to depression.

The constant changing of careers in American culture today leaves nobody with security that they will have a job the next day to pay the bills that month. That job insecurity that many Americans face causes them stress and anxiety which causes depression because they have to worry if they will have a job and be able to take care of their family, to feed them and provide heat to keep them warm.

Working forty-five hours a week is causing physical and psychological problems today. Physically American's are becoming overweight, overstressed and out of shape. We are eating more fast food, exercising less, and have more stress in our lives, which are all

factors to obesity. Half of Americans today are considered obese. A lot of the stress and time constraints of our lives are because of all the hours we work and extra time we devote to work everyday. If we would work an hour or two less in a day we could go to the gym for an hour and have another hour to slow down the rest of our life so we could eat healthier and have a little less stress. Going to the gym is a great way to improve your stress levels in your life. It overworks the body then forces it to relax to rebuild. This in return causes your psyche to relax also making you feel less stressed even living the same forty-five hour a week life or a new thirty-five hour week. Psychologically a long workweek is hazardous. Working all those hours makes you feel as if all you are alive to do are work. That cognitive thought alone can send people into serious depression. If you always thought that the reason you were alive was to get married, raise a family, teach your children well, and pass on your genes, and now you are working all the time and never have an opportunity to start a family or if you have a family and never get

to see them, then why be alive? Or the smarter way of thinking would be why do I have this job? Mr. Thomas, a missionary once told me that the happiest and least self-servicing people he has ever met in his life were natives in Fiji. He spent three months in Fiji during a one-year long mission's trip to Australia. The average American needs to realize that money is not the reason that you are happy; it is money controlling your life that makes you unhappy.

If having no job security, lack of rest, and being overworked was not enough; the fact that social stratification is also a factor in our already hectic lives will drive any sane person into a manic episode. Social stratification is the unequal distribution of rewards, weather they would be money, power, or material items. This is usually seen on a corporate, society, or even global level. In conventional terms it refers to the rich getting richer and the poor getting poorer, which is very true in the United States today as it is in the rest of the world. The inequality shows everyday. The ghettos and poorer neighborhoods appear to get less attention from

the government and have older buildings and roads, while the rich neighborhoods have very nice roads and modern utilities. A lot of this is because the richer developments give more tax money but the poorer are the ones that really need it. This works in the corporate world just the same. The executives that make a million dollars a year also get a company car, travel expenses, free lunches and a lot of other benefits that the lower employees do not get. Even though the executives can buy a new car with a paycheck or two and it takes half a year for the other employee to make the same money. The lower employee needs the help of a free lunch or travel expenses but does not get the help, unless they are the boss's son or some other unfair exception. Social stratification also has affect on the salaries of the many employees of a corporation or the government. The executives make \$300,000 plus a year, which is okay because they earned a higher salary, and the average Joe will make an average of \$45,000 a year, which is good also, but the unjust part is the women and African American's who, just because of race or sex make less

money. Even if they do just as good of a job, or better they still get paid far less because of their race or sex. Social stratification is one of the many unjust actions that take place in the American society, government and corporate offices.

One man, Newton Ooi, has an idea on how to relax America a little, but there are uncertain economic consequences. He called it “My Contract with America.” He lists three laws that he believes need to be passed and the ways to reinforce these laws. Each law will apply to the citizens of the United States and people of other countries working in the United States. They will also take affect to private and public employees of the United States. The first law states that every employee will only be required to work a thirty-five hour workweek, instead of a forty-hour workweek, like in today’s society. The next law states that we, employers of the United States get a total of eight weeks of vacation a year to use. The employee cannot interrupt the vacation in anyway and the employer my take the in any way he may deserve. The last rule is

related to overtime. The employees of the United States must be paid time and a half for any overtime and double time for anytime over forty-four hours a week. These laws all give a good idea on a way to lower the workload and reward the employee without hurting the employer and the economy too much.

American society is a power never seen before by mankind, and mankind is having a hard time to deal with it. The average American spends too much of their life trying to live like Donald Trump, a millionaire real estate mogul, who has it all. A beautiful wife, a couple expensive and excessive cars, a house or two and cloths that cost more than a year of college education. Being an American I know that we all have the attitude that anything is possible, and it is, which the greatest thing about America is this notion but in order to achieve this an American will have to forget about anybody else working twenty-four hours a day and devote their life to deadlines, plane tickets, a cellular phone and a laptop. Once the average man can do this he will have all that he wants.

More money that he can spend will fall into his lap but he will have no one to spend it with or won't be able to spend it with his family. The most important thing is how all of this chaos is causing the average American to be stressed, lonely, depressed and approaching a state of mania. We are essentially driving ourselves crazy. It might not be completely our fault though, the D4-7 allele enzyme has been shown to be the reasons Homo sapiens have the urge to be adventurous and want the best, on our way to survive. Because we have all of the amenities we have today we do not need as much, or any, of the D4-7 enzyme to survive in the world today, so it is causing ourselves into mania and depression. As American's we have to slow down, realize what is really important and take care of loved ones and ourselves.

As Mr. Thomas stated in my interview with him "the happiest people I have ever seen in the world were the ones that have nothing except for love from their family and community, it was so beautiful."

## **4: Controversous**

Are *Homo sapiens* a pathogen? Look at their history and present and future. From the beginning of time human beings, *Homo sapiens*, have wanted knowledge and to explore. Since the beginning of recorded time human beings have been tearing apart the earth. *Homo sapiens* are a mammal or warm-blooded vertebrates that have sweat glands present. Their closet relative is the chimpanzee. Many geniuses such as Albert Einstein, Charles

Darwin, Mark Twain, and Jesus are quoted in this document about the Human Disease. *Homo sapiens* are the largest pathogens known that are in the organism, Universe.

*A Pathogen:*

A pathogen is a disease-causing bacteria, virus or protist that may inflict lethal harm on their hosts. The most commonly known pathogens are viruses. A virus is a species that human beings have given no true classification for, but as a living organism. Viruses first attack another species and find an area within the species that would be seen to be the best-suited area for their existence. If this place has at least has the basic materials that are needed for survival, energy and water, then the virus will begin to reproduce rapidly. This reproduction will occur in a J-type scaled rate. J-type is a rate upon which the species is first minute, and once the environment is correct the species will begin to reproduce at a very quick J-rate. This graph would appear, to a Latin based language speaker, like a J that is negatively skewed.

Populati  
on.

use. A virus also binds the host to find energy and water for the organism it inhabits. This is in order for the virus to be able to live in the conquered species as long as possible and use the least amount of energy possible so that survival will be easier. Human beings around the world need to enslave animals or machines to find water and find or become of food for them. For their survival has de-evolved to the point where they are no longer strong enough to hunt and gather for themselves. This would call for mass hysteria if any thing were to happen to the technology and way of life that the beings have been accustomed and trained to act upon. This is the

major problem with law makers in first world nations and world powers, for they know of the problem but with the technology and way of life that the culture has been introduced and trained to act with human beings in first world nations, will not be able to survive without the modern technology and enslavement that they have done now for thousands of years. *Homo sapiens* have enslaved other animals; even other humans, before machines, since the beginning of written history, or the written words following the history of human beings.

If human beings continue on the path they are currently on their intelligence will eventually infect the universe. The human species is currently taking away the resources on earth and using them for their own good without the consideration of all of the abiotic and biotic life on earth. Abiotic life is life that does not consist of cells but is alive. These are alive for they consist of atoms and these atoms move from energy. Abiotic life may be the granite rocks or more profoundly the oil and soil remains of past carbon

cellular life. The biotic life is life that consists of cells. Cells make up plant and animal life. These are more complex individuals and use energy on a greater level. *Homo sapiens* are on the top of this energy level but are still no better or different than even the abiotic life for they are made of the same materials.

### *Problem of Knowledge*

Since the beginning of time we have always wanted to know everything, see everything, and be everything. We have always wanted to be the Gods that we worshiped and we are turning into that God we have always worshiped. But look what it does to our world. Human beings are no different to every other animal in the fact that we are programmable, or domesticated according to Darwin. Freud called this our conscience and subconscious. Our conscience is the visual, touch, taste, hearing, and chemical stimuli that we take in everyday. Reading this, drinking water, listening to music and sitting next to the girl in which you are attracted to will cause a chemical reaction between you two that you are consciously

aware of. These stimuli all affect your mood, your behaviors and the way you consciously view the world.

Your subconscious is the ways you have been trained in your life. From the beginning of your life you have been manipulated in ways that you are not always aware of. A lot of these things are your social influences, while a lot are your family traditions, and the other institutions that you have been a part of. Places of worship, pre-school, school and your working institutions are some institutions that many people are involved in. Religions show us who we want to be. What we think is perfect, what we worship, and it is how we create our lives. All institutions train you like a machine to obey rules, and follow the leader. You have to share, and you listen you are your elders. They also teach you to stand in line together and to look, as you are robots. We are machines and make ourselves machines. There are no true individuals. “You are just a monkey on a string, a dog on a chain,” Dave Matthews.

Knowledge is also known as analytical thought. This analytical thought is a process that human beings begin to notice once they become an adult. About the age of eighteen to twenty-four years of age a human will start to be able to process abstract thought. This abstract thought is being able to see the world for what it is and putting these things together. It can also include being able to think of things such as what is the universe and time.

The analytical thought is the reflection of the events that have occurred during the process of the development of the mind. For after teenage years the mind is not developing more wrinkles within the cerebral cortex and then is no longer able to really accommodate to new information without hard training. The reflection of life before adulthood is the training that was achieved while the instincts of a being is being used. These instincts are the basics to animal life and what it is to be an animal and live free. Not live enslaved into a world of hell.

A hell of a world, of greed, that could be for different

created parts of the earth to enslave or knowledge. The pursuit of knowledge will lead to human beings becoming enslaved by their creation. Human beings will become so greedy for knowledge and the power to control objects that they enslave that they will start to have the computers or other beings of a different time perspective, as will be written about later, to search for the knowledge that humans will search for. Human beings seem to need to know why we are here, need to know what else is out there, need to know what time is, need to know if there is a God, need to know how other beings think of them, they need to know everything. If they would stop having the greed that makes them un-trust the world around them, then they will discover this knowledge. This knowledge is within the DNA within them. This knowledge is within the atoms, matter, and the energy, that consist of them. This knowledge is throughout the world around them. For knowledge is a priori. An a priori is knowledge in which is always present and from the past or future. Knowledge will become present to all once human beings

stop enslaving the universe, stop having distractions and start listening. Humans need to know that they are one with the universe and that time is perspective. Human beings need to realize that they are an animal and no more than that, they need to respect the rest of the food chain for it is more important than the top of the food chain. For if a species on the bottom of the food, energy, chain dies off, all of the species above this will die off also.

As human beings believe they are greater than the rest of the universe in their greed for knowledge they will continue this greed throughout the universe. On the journey to search for what else is there they will use up all of the resources of the planet they are on and continue to the next planet. They will not be able to accomplish this as a cellular biotic life form though. They will have to continue this as an abiotic life form. This life form will be processed through computers and a virtual world. The knowledge will still be continued to become processed because the human mind will be attached to the computer and thrive in a virtual world. The

energy to run these computers will come from the energy of the sun, or closest star, in which their mind's energy is composed from. The virtual world will work for it will affect the same neurons within the mind to act the same as if the impulses were from a real life situation. Just as video games are working within the current world. The Wachowski brothers have already discussed this theory of future life for human beings in the movie "The Matrix."

It goes further though. Once human beings have introduced artificial intelligence to the computers that will then become their masters. For the computers will now enslave the humans just as humans have always enslaved the earth because that is the intelligence that the computers will have gained their knowledge from. The human beings will become the source of the energy for the computers survival and also their source of the knowledge that human beings have once had. The search of knowledge will also become of the computers. This search of knowledge will drive for the abiotic computers, whom have no

mortality of cells to hold back their life time to a perspective of human beings. Only then will they want to search for what else the universe consists of.

This journey will continue, as the computers will move from one planet to another in search of past life to take away the fossil fuels to refuel their engines and search for other life. This other life will then become enslaved from the computers to become a source of energy for survival. The computers will suck out the fossil fuels of past life or take the resources of current life, if any exists with in the universe for the survival of their species. The actions of the computers take place because of the actions upon past human life. The computers, just as humans, are trained to act upon situations based upon past actions. Since the greed of knowledge and of enslavement of the resources on earth was created from humans, the computers will just continue to thrive just the same for the only knowledge and way of life that they will know to live by will be of an western individualistic first world country way of life.

Where greed and envy power the way of life in the current western first world just as it will for the computers intelligence for the western world is the only nations with the power and money to create such a machine. The perspective of these humans will then be written into the codec of the computers that control the machines for the search of knowledge.

On the humans continued greedy search of knowledge that is now incased into a abiotic organism of a computer will soon land the need to use fusion power instead of fuels and diffusion to power their machines for the lack of near by planets. This will lead to become of past life being sucked from to the center of every stellar, biotic, being to create power from fossil fuels and diffusion. This use of fusion also known as nuclear power will have one problem with it. The use of fusion power, or the collapse of the mass of the atom in order to create power from the opposite reaction of the cause, will create a black hole. Since the computers do not act on instinct, and therefore will not be afraid, the machine will now

continue into the black hole, only to discover another universe.

A Black Hole is a dark black spot, on the ground of the floor of earth. Like a place in the sky where no light is shining but everything tends to surround. This is because the mass of the future, and past, all lead to an equal balance between all of the different galaxies within the Universes. The suction of light from other objects destroys the matter in which was one place set there and then is moved to another place within the Universe. When these objects are moved. They do not change shape, unless another up to infinity, amount of force is placed upon this object within other directions. The only way to escape a black hole would be to tilt the whole galaxy on the side. This would be like turning the world between forty-five degrees negative and forty-five degrees positive. This turn in motion does not cause for the world to end, it causes for he to make the world without the consequences that may have once been

This black hole would be because the immense amount of power created from fusion of absolute zero frozen hydrogen atoms

will pull all of the mass into another dimension. For so much power would be needed to cause an atom that is completely stopped in absolute zero to be transformed at the speed of light to the complete opposite wave of an atom to become frozen again on the finite, yet infinite, spectrum of energy. This action and amount of power would create a complete opposite reaction, or a big bang. This dimension unknown to the perspective of a being outside of this dimension for it does not allow for atoms moving at the speed of light to escape. This big bang would then cause another universe. This other universe at the same time is having fusion take place in the absolute zero temperature hydrogen atoms within this universe that would again create another black hole from fusion and then again another universe. This cycle would continue infinitely, for a number of times cannot be even fathomed or ever counted. For as one may begin to count the first black hole another new universe would be created and destroyed. For one universe would become destroyed once the complete opposite force needed to create the

universe, fusion of an absolute zero temperature hydrogen atom, would occur. This depletion of a universe would not be equal to this force though for an action not completely opposite would need be to destroy such a being as to create, for the being, universe, would use more and more of its own energy as it persisted on the journey out. In fact by the time the universe would have reached the complete opposite reaction to the original fusion from the black hole the universe would have already distributed the energy through laws of diffusion. For gravity is such as diffusion and the particles left over from the original fusion would be distributed throughout the universe in beings of what human beings call galaxies, stars, planets, comets, and asteroids. This would occur because of the infinite, and unimaginable to human beings, amount of time it would take for a universe to expand such as a balloon. This distribution of power throughout a universe would cause the universe to become at a steady state once a universe reached the opposite power of the original fusion that created such. This would not cause for a

collapse of a universe but instead a steady universe and then a build up of universe  $\langle \{(s)\} \rangle$ . This build up of universe  $\langle \{(s)\} \rangle$  , which again is created from the fusion of the absolute zero temperature fusion of hydrogen atoms, would build up to create a larger being. These universes would appear to the being as atoms within their perspective. For they would have the same properties as human beings called an atom. These properties are what will be visible to this other being.

This abiotic and biotic being, or the Dimuniverse, is really the original observer of the atoms of the original universe. This would be plausible for every universe just as every atom's move is based on diffusion when an outside source is not present. This diffusion would cause for every action that takes place to eventually return to the source, for this source would have the least amount of energy and therefore the most mass. This would cause diffusion to take place for diffusion is the action of atoms from a high to low concentration of atoms or a low to high mass. This circle of time is

the same that occur within the atoms where the electrons circle around the neutrons and protons or the nucleus. The rate that the electrons circle around the nucleus are a direct result of the mass of the nucleus and the amount of electrons that circle. This rate, or mass, is what gives the atoms their perspective of time. For the faster the electrons circle around the nucleus the shorter the life span, the more often the atom will need to create energy. This explains why hydrogen atoms have shorter life spans and need energy more abundantly. This is away from the point of how the universe will always return to the original source.

For if there if no outside force only diffusion can take place, while fusion requires energy to become created. The fusion may become from the explosion of a star to cause a collapse or from a man created fusion bomb, the hydrogen bomb. If everything would then return to the original universe for it has the most amount of mass and then meaning that time just circles itself, but it is the differences in the mass of the atoms that create each being. Then

how do we know anything exists for it is just a circle, within a circle, within a circle, etc.

This is not saying that there is only one original universe though. For, through the opposite reaction of fusion, new universes are created all the time but how was an original started that would consist of the most amount of mass? Unless you take out of the equation that there is an original, there is no beginning and there will be no end. That beginning and end are all just created from fear of human beings because they are aware that their collection of cells will die, but the atoms are still there and so are they. That nothing began or will end and that the atoms will always be here and always have been. That everything is just a complete circle just as diffusion is based on, a balance. If you take out the original universe you also take out the possibility of an original observer. Taking away this original observer takes away the possibility of an original creator. This also may state that there is an infinity amount of time for the universes to just spin upon each other with the exchange of atoms

and mass. Where one universe is at anytime no more abundant in any resource than another universe, through the laws of diffusion were the exchange of particles of such huge beings would always become still except for the ever-changing and equal exchanges of atoms and energy through fusion.

### *Time and Diffusion*

Time is a perspective. Perspectives on how fast the atoms are diffusing around your body, in which, you notice through your senses. On earth, as human beings, your time will appear such because you are made up of hydrogen, nitrogen, carbon, oxygen and lead, mainly with other chemical of matter also in place and changing through your diet. These atoms will move around within and out of your body from the gases, or lightest materials, that surrounds your being. The time it takes for these atoms to move throughout your body and extrude out of your body and into the gas and other tighter bonded, denser, atoms around you. A lifetime

appears of that because that is how long it takes for the atoms in which is composes your body, to diffuse from the cells that make of that body, to diffuse into the world surrounding it. By giving a body more energy to rebuild the cells that make of that body, you are then extending this life by allowing for the atoms of these cells to stay bonded to each other at a stronger rate. This body will slowly break though, this is known as death.

The atoms that make of this cell will adapt to the energy that the cell is given and will then need more energy to keep a bond as strong as it once was. The energy in which gives life to any form and thus the bodies life is from fusion taking place in a star. During this adaptation the atoms that surround the body are also adapting to the environment and therefore become stronger or weaker. This strength is from the power of diffusion, fusion, and fission. The differences in the positive and negative atoms and the concentration of the amount of these atoms surrounding the body become stronger for there are more forces being put upon these atoms. The body is

being pulled apart slowly as the diffusion takes place, fission.

Foreign objects taking place within the body also help pull apart the atoms. For the atoms of these pathogens pull away from the atoms and take away the energy that was once given to these beings. Energy is the waves from the fusion of a mass, where causing waves within the atoms to create a faster moving process. This may seem to almost speed up a life. Which in turn does, but this may also slow the process of life, when the star, or energy source begins to die, or the potential energy is being built.

For if energy was not present then the atoms would not diffuse at all and then time would seem to move slowly or not be present. This is a law of physics that Isaac Newton calls; with ever action there will be an opposite and equal reaction, or his third law of motion.

Time may also stop once you reach a speed faster than that of the diffusion of hydrogen atoms; Albert Einstein theorized this in his Theory of Relativity. For then a perspective faster than that of

hydrogen's diffusion speed is one that would not seem possible.

Human beings have asked if time travel is possible if you speed up the atoms to faster than that of hydrogen, but if the hydrogen atoms would not be moving at all, would you not be able to travel also.

The same process is occurring whether you speed or slow time to a rate of Hydrogen's fusion. Both theories state that the reaction would not be taking place. If you were moving faster than the atoms: the diffusion of the atoms would not be occurring, if the diffusion process stopped from no energy being present then trying to move faster than the atoms diffusion rate would require no energy, and thus being most efficient. For if there were no energy was placed to cause the waves of the atoms to move faster there would be no time and all would stand still, as if frozen in time.

Time of which is a perspective from the speed of diffusion of the matter surroundings the being and being interrupted by the senses of a being.

The absence of time does not mean the absence of life. For

all the atoms that make up the universe have energy being used, kinetic, or stored, potential, and that is known as life. A life that consists of no time though would have full potential and therefore the atoms are frozen at absolute zero with all life still being in space. These atoms that make up the universe, also make up the life on earth, and all matter moves with energy, even if this energy is infinity and the matter seemingly unmovable. All matter has a potential and a kinetic potential, for this is how a being knows that it is alive, for it is able to move. These beings have no size limits, at infinite potential if at absolute zero. If any energy is able to be present then the object is known to be alive, therefore the universe, even at absolute zero is known to be alive.

What earth beings see as time is merely the speed in which diffusion, fusion, or fission is taking place around or with such being. It means that the ground, the planets, and the space in between do consist of life. This is justified by the proof that a potential or kinetic energy is always present, or time is always

present. Even at full potential or full kinetic, that time occurs. It is that these beings are at a different perspectives.

### *More Perspective*

What a mind creates is different one hundred percent from person to person. A mind's creation is their reality or perspective of the world from their physical, sociological, and psychological senses that is endured through the senses of the being and the reactions these environments have on the genes. First the phenotypes are affected and then latter the genotypes. The actions that people may take are measurable only because they are trained to act accordingly to their environment. The training may be past actions or from a priori ideas such as natural instincts or reflexes. People cannot judge of what is true, for they are not really aware of what is going on around them. If perceptions are different, which can be

explained from the axon and myelin development throughout your childhood and early adulthood, then how may one think that there is only one God, or one observer. The time when an axon develops and the information of which is learn, or introduced to, all effect the way a perception of an events places, time, and every one of the five senses that enter the mind.

How can there be a measurement of something that is not true from person to person? How can there be a measurement of reality? Look at it this way, every year, as of 2007, there are 6,400,000,000 years if you count just the measured human being lives on earth that does not include the countless amount of other beings of energy within the earth.

Think about our galaxy, the Milky Way, consists of and the massive size of this place, really made me think. The think of how new stars are formed all of the time and how the Milky Way has a black hole within its center.

### *Evolution with Diffusion*

Many scientists have been contemplative of how evolution occurs. As stated before and many times here, diffusion is the basis of atoms and life. The evolution of a being, whether cell based or not, is through diffusion of their atoms. Lets take a group of atoms, if time would be frozen, at one point. You introduce energy to these atoms and cause the atoms to begin to spin and diffuse around and with each other. This diffusion occurs at different speeds depending on what other atoms are in the environment of the atom at a given time. If an atom with more negative electrons is surrounding the atom, the atom will be attracted to this atom. For a positive is attracted to the negative. If an atom would be within a surrounding environment, which would be of more negatively charged atoms then the original atom would attract the more positively charged atoms. For if one positively charged atom is placed next to two negatively charged atoms, a building of three atoms are placed

where the total charge may be negative by mass, but with three atoms present. A total of three is then made from the one positively charged and two negatively charged atoms. Not the movement of the energy, but the building of the mass. This diffusion of each atom, to the other atoms would occur in small steps. These small steps are the building blocks of evolution.

For the more atoms that are diffused onto the next atoms would cause for a major change with in the environment to greater and greater sizes. The diffusion process would occur at different speeds depending on the amount of energy present and the mass of the atoms present. The more energy the faster the evolution process would take place and the more mass and the slower the diffusion process would occur. This is why the sun evolves at a faster speed than the formation of a planet. For the sun, or movement of gas, is the diffusion of the atoms of a lighter, therefore quicker mass, and a collection, usually of more atoms, than in a planet's rocky dense atoms, where the movement of energy is much slower.

The easiest way to notice diffusion and therefore evolution is when you breathe. For when you inhale you are changing the consistence of gas-massed atoms from outside of your body, or a higher density, to inside your body of a lower density. An abundance of atoms that consist of more mass are atoms that will evolve slower, than such as a the universe or a planet forming on an extreme, or more relatively why animals take more time to evolve than a plant, or the wind. And it takes longer for tectonic plates to move than it will for generations of an animal to evolve. For the abiotic plates are more dense then the biotic animal and therefore have a longer evolution and perspective of time.

### *De-Evolution*

Did we ever think how this is causing us to evolve? Or de-evolve? The rock band Korn has a song out that excerpts this concept, "De-evolution." How we are no longer going to be able to be the strongest, fastest animal but we can type at 150 words per

minute. How does that madder in Darwin's theory? What if something would happen, such as a time where a mass flood happens and the skies turn dark from pollution and we run out of the thing that gives us the reason we can have all this luxury, oil? Well we will probably just go to Mars and do the same thing there, because you defiantly know they are looking for oil, also known as past life, on Mars. We will just take out our strongest and move there and let the weak die. Look what that does to Earth. It takes the most beautiful thing in the universe and turns it into a dark black lung. Attractive huh? Why do we do this then?

*-Slavery* is the use of any particle for the benefit or any other particle, without the consideration of the consequences of such particle, or the well being of any particle.

*-Freedom* is the use of any particle for the benefit of any other particle, with and only with the consideration of the first particle, the second particle, and the infinite other particles.

*Slavery/Domestication*

Domestication is the process of training an animal to act upon certain commands and live within a society. This process in return allows for the animal to reach higher levels on Abraham Maslow's Hierarchy of Needs. These steps to the Hierarchy of Needs will be discussed upon later. All humans are domesticated in one-way or another; society, schooling, governments, parenting and the military are just a few of the ways humans can be domesticated. Viruses have a process called lytic cycle. The lytic cycle is defined as the induction of viral DNA into another cell in order for the cell to reproduce. Logically could also be defined as a pathogen taking over the cell to do what the pathogen wants.

This process, by definition of memes, is also the domestication of the organism by the process of infecting knowledge to the other organism. This pass of knowledge from the one pathogen to the now infected being in return creates for the infected being to act upon the wishes of pathogen. Many times this domestication can also seem to be enslavement. This could be seen

as enslavement if the being that has been infected with the knowledge through the lytic cycle does not have their own well being taken into consideration from the being infecting the information. This well being could be defined as the care of a being with the consideration of their, own comfort, decisions, perspectives, and safety being taking into consideration before any decision shall be made. If the being, being infected with the information does not have any of their own considerations taken while their process of domestication, training, in process or after the consequences of the trained upon actions are completed. Then these actions could be considered to be slavery. Slavery is the process of using an organism for the good of the one, or the group, without the care of the wellness of the other, enslaved, being. These beings can be of any sort, biotic or abiotic.

Abiotic or biotic life forms could be considered a being for enslavement. When enslaving an abiotic life form such as an animal training needs to be completed. When enslaving an abiotic life form

such as a plant the movement of these plants from their natural environment with our the process of leaving the original plant and continuing the cycle of energy by using the fruit to spread the seeds around the natural environment to reproduce the plant. When enslaving a biotic life form such as rocks, or water, one would move the atoms that these lives consist of from a process not that of natural diffusion and evolution. When human beings move around the atoms of the world to fit what they feel is their right of comfort without the consideration of what their actions may do upon these atoms their surrounding atoms or environment is the human population enslaving the universe. For the stars and galaxies that are above their heads are made of the same atoms that are within their bodies and throughout their world.

Many of a Christian's life's experiences involve some use of the Earth in a way that is unnatural for it is enslaving of the earth. The clothes I wear are shipped from China; my shoes are from Europe and my computer from California. Every one of these

actions has caused someone else to lose minutes off of their life from stress given from the domestication of work and the materialism of the Christian's life. The people whom live the longest in this world are the ones whom have their family and loved ones close by in hunters and gather for their food and live day to day. Stress is the number one killer in America, is that enough to show our lifestyle needs to change? That something is wrong, not with just America but the mass majority of the human race as well. I have realized the problem, which is the first step. Time will tell on how fast we can change.

### *Economy*

The economy is the amount of resources that the world has to offer for any given species. The reason for inflation is because there is less of an amount of different resources that is available for consumption at any given time. The sways in the economy are from the evolution of the economy to new, or different, ways and resources.

Human beings tear apart the earth and use the resources. At first a resource will be plentiful and therefore cheap because there is a lot less of a competition for resources available. As the resources are used the price will rise for there is then less of the resource available. Once the resource runs out human beings will then move to a new resource that will sustain the same energy after already killing off the old species of the resource. For at first they will attack the species that is most plentiful for energy and then move to a species that has less energy. They then use their intelligence to create organisms, machines, that are more resourceful for they have to. Human beings are de-evolving the whole world while their greed for knowledge is becoming greater. For renewable resources, such as trees, the sway is because the resource needs to re-grow to a mature level before human beings are able to re-use the resource. The price will then lower again once the resource is plentifully available.

*Homo sapiens* also tear apart the earth for metal so that we

can have food and water wherever we want. Look at Las Vega, the sin city, for it is in the middle of the dessert and is a growing city in the United States of America. The only way that this is available to humans is because we have pipes and trees carrying all of the food, water and power to have a civilization in the middle of the third biggest desert in the world. While tearing apart the organism to use the items they need to survive and reproducing rapidly the pathogen will consume all that it may seize for its own use, even if this includes taking over the brain of the species and controlling it. But this can also mean that the virus digs up every tissue available in the organism for food and housing. Once the virus completely destroys, or at least starts to destroy the house species, the virus will move out into space and find a foreign species to conquer and start all over again. Just think of the organism as Earth and the virus as human beings.

### *Overuse of planets*

Overuse of the planet earth is a great moral, Pope Benedict

XVI, question that human beings need to take action upon. Whether you believe there is a God or not, human beings are tearing apart the world. The species *Homo sapiens* have multiplied at a rate unseen in most of science, especially from mammals. The normal mammal population evolution is noted to be an s-shaped curve, or logistic growth pattern, where the population will rise until it reaches a K-point where the carrying capacity of the species is reached and the population then settles upon an ideal number. For human beings have already bypassed this K-point for their species if they lived within the normal laws of nature. In 1999 humans were using 120 percent of the earth's resources according to CNN's website.

Humans have increased at an extreme J-shaped curve, or a boom and bust growth pattern. *Homo sapiens* are currently doubling their population every thirty-five years which is really impressive considering we have one of the latest puberty arrival rates, or around fifteen years, and also one of the longest maturation periods, around eighteen years, of any mammal on earth. Meaning in this theory, in

the year 2042 human beings should be at 13.2 billion. That is too many species of one species as large as human beings especially if the species as a whole is developed as much as the current United States. For the K-level, or the maximum balance of a species to live with in the earth's economy, or between ten and fifteen billion Homo sapiens. That is when the earth will be out of resources for human beings to survive or even for the earth's biotic life to exist. Where the United State's specimens use more of the earth and abuse the earth more than any other specimen on earth for they believe they have the right to because they have the money to buy the earth.

### *Destruction*

We know what we are doing to the Earth, so why do we do it? Well it is pretty simple, because we can. This life that we currently sustain gives us luxuries that we would not be able to have. Instead of having to go fishing in the morning to be able to eat that day, I open up my stainless steel and plastic fridge and pull out some milk and cheese from France. While I eat my cereal I also poor myself a

cup of coffee from Columbia or Egypt. And then I pick up my favorite newspaper from a town 200 miles away and read about what sinning takes place in this world.

While doing that 20 minute routine I have killed ten trees, wasted at least 100 gallons of oil, which has polluted our air that gives us life, and have helped dig a 100 foot hole in the side of a Pennsylvania mountain side. I have also put at least one animal in prison from domestication.

Having this help with modern technology is great but what happens since we do not all reaches our peak of the triangle? Do we get stuck at the finding of love, or does society holds us back from not reaching this, for we fell as we have to conform to society being the only way to have "Fallen in Love." That is a high school principle and has nothing to do with it. Love does not exist. It is a chemical reaction when a human being meets another human being with a similar genetic history. Then you feel feelings like never before and you go up a step on the triangle at the moment that you

reach this. Your life changes and you are one step closer to changing the world, just as Mother Teresa did.

### *Global Warming*

Vice President Al Gore won the Nobel Peace Prize for his work on Global Warming. A group of scientist from the United Nations, Stanford University, and Al Gore were the 2007 recipients of the Alford Nobel Peace Prize. The prize is in appreciation of his Academy Award winning movie “An Inconvenient Truth” and his best selling book, *Earth in the Balance; Ecology and the Human Spirit*. Many people are wondering why Global Warming may win a peace prize? Well global warming, whether you believe it is natural or that we really are tearing our heaven away from ourselves from right underneath our own heads, will cause lands to change, climates to warm and cool. This will allow for new resources to be available and for other resources to die off, along with millions of

people. His movie and book show a great way on how we can live in peace on Earth. For even as one of my professors, Risser said in class, ever since the introduction of weapons caused for violence to rise, especially in developing nations. We were at one point a developing nation and almost all nations around the world are developing nations. If we live in harmony with Earth, then we will stop fighting each other. For even as we discussed yesterday in class, humans are only now territorial, for we once were nomads, just looking for food. We would help each other out and not fight for resources, well maybe the meat from a bear. But I have the feeling that we would have just shared because “third world” countries live as nomads and they hunt and gather in groups and then share with the families. Global Warming is the destruction and overpopulation of Earth from Homo sapiens. Stop violence and therefore we will have peace, for we will live in peace with Earth, our heaven. The way to stop violence is not to put our armies into lands where violence is strong but to leave the violence to stop it

self. It has been proven that guns have caused an increase in the violence in second and third world countries. But also has the western culture. For by believing that one person must be the best and the fight that one person to be the best has caused a violence streak in America and other western civilizations. Out of all the countries in the world the United States has the most amount of gun violence in the world with over eleven-thousand deaths a year from guns with even the most powerful community, not individually, based countries have less than one-thousand, including the United States, Germany and Japan. For trying to stop violence by violence does not work. For every action has an equal and opposite action and by using violence is just asking for violence to come back to you. As the United States noticed on September 11, 2001, no one is invincible and actions do have recoil.

Global Warming is a result of climate change designed by human beings by controlling the differences in the rate of diffusion in the differences of the atoms of positive and negative charges

becoming attracted to each other. The Global Warming and the extra waves from the sun are causing an increased amount of the diffusion of the hydrogen atoms in the atmosphere. For the negative charged particles of the hydrogen or the hydrogen's electrons will be trying to find the positive charged atoms of the hydrogen atoms and other atoms with in our atmosphere based on the law of diffusion. The law of diffusion is that negatively charged particles will try to find positively charged particles or positively charged particles finding negatively charged particles. This is shown in the temperature differences in our atmosphere or in the wind. Wind is the result of negatively charged atoms finding the positively charged atoms. Which are the differences in the amount of hydrogen atoms in the atmosphere at the same any given time. When you are at a higher temperature, the hydrogen atoms are moving more freely to find the positive atoms within the atmosphere. By burning of fossil fuels we are warming up the atmosphere by allowing for more positively charged atoms to be available for the hydrogen atoms in

the atmosphere. The process of burning fossil fuels has a product of carbon dioxide.

*Problem with American Society*

The United States' culture promotes sinning. This sinning comes in many forms within their modern society. Greed, individualism, and comfort are just to name a few. As a pathogen we trying to live and destroy as much as we can before we become extinct. Very rarely do we really see people whom have been able to take on the burden of whom we really are and what we are doing to this organism. The media always tries to dignify those people as druggies, or part of a cult. Tries to show people whom just want to fit into what society says, and be the normal person, that going against the grain will not be the best of you. People since grade school have always wanted to be the person that everyone looks up to and wants to be. Well, fitting into what the crowd does or says does not make you stick out and be that person that is worshiped but instead you are still stuck in the humanistic level of love or

belonging, because you do not get that sense of belonging because people do not talk to you about what they, themselves do everyday but people talk about what is different in the world and what is happening that is different from themselves. So if greed is the desire and to be the popular person on campus, be different be a rebel, for then people will notice. Then people will see you for whom you really are and they will like it. Our society knows, subconsciously that we need to change. But we still continue to live this life.

Look on how the most educated people in America and around the world are more liberal and democratic, or understanding of evolution. The most educated people in the world usually are until the sins of greed and money bite them. Christians tend to believe that humans can sin, for he will forgive us. Um...that is wrong, for who will forgive us? To every action there is an equal and opposite reaction. But as Christians believe they are different then everything else in this Universe, for they can do what ever they

want to and not have any recourse. One day their creator; God, also known as our Universe, will come back to Earth and forgive the strongest and it will forgive the strongest. God's return will be like an anti-body in an organism that is out to kill the pathogen. Humans will be killed unless they start to realize what they are and their place in the world. They need to stop sinning and become strong. For only the strongest will survive. The rich are not the strongest, they are the weakest and fattest, and the physically strongest are the poor. For the poor usually are stronger not just in a muscular sense but also with immune systems. For they have had to adapt to their environment. The rich live in a sterile world, therefore killing living things all of the time, and do not adapt. They kill and enslave the beings around them. The rich have been the same for thousands of years because they have never had to adapt. The strongest in the United States of America are the recent immigrants and the blacks. They are also called African American's but all human beings, everywhere, are African's or South American's.

Southerners in America have caused them to become the physically strongest because they were enslaved and that has caused their biological gene history to become stronger. Look at most athletes in America; they are an earlier immigrant, or ex-slaves. They are also the newer being of our species. These athletes are the human beings whom were the most developed physically from the constant physical labor that they were once introduced to on plantations. Now instead of other animals, human beings enslave other machines, still atom life, on larger plantations to feed the world.

### *Individual Solutions*

There are many individual things that human beings can do to pro-extend their life. The first step would be to recycle everything that they use. For recycling allows for human beings to reuse the original resource with out digging up new resources and trashing the past resource. This will extend human's existence by allowing for resources to be renewed instead of using new resources

or killing of more species. For American's tend to overuse everything because it is in excess and they do not notice how hard their use is on earth. These actions to help the solution to go smoother can include: not taking long showers, not keeping electronics on all of the time, keeping the window closed in the winter season and keeping it open in the summer season, not using computers much, and using renewable power generators. Using birth control and becoming educated help to level out or even decrease the population. Birth control allows for offspring to be born only when really needed and educating oneself will allow for the process to become easier. Human beings have less than fifty years to become morally strong enough to take care of their overpopulation problem or earth will destroy them before they can destroy earth, maybe?

*God's Existence?*

*Homo sapiens* need to realize that there is a God, or a higher human like being, but there is a larger organism that we need to worship. Humans need to live their lives for the truth of the higher universe. Human's need to not live as if humans are the greatest lives, and start to bring to the conscience that their actions are affecting this organism we belong to in a negative way. Humans are no greater than the rest of the plants and animals on this planet or even the rocks and grass they walk on everyday. Humans are made of nothing more than them, because they are made of the same things, where Hydrogen is the most abundant of all of these matters. Human beings are actually the most fragile piece of the energy cycle of life. For they are at the top of a pyramid and if the base of the pyramid is removed the whole cycle will stop, or all of the species above the lost energy will then become extinct. Human beings may have the technology and intelligence to easily move onto a new source of energy. But the overpopulation and overuse of the energy sources below human beings are starting to destroy the cycle from

the base up.

I have been doing way too much thinking recently about what path to take? I know I have been enlightened and it is hard. Hard living with these comforts that afford me to reflect. They allow me to see too much evil. Evil I wish not to see. I would enjoy too much, heaven, to be of these reflections. Without these reflections must come with the sacrifice of these comforts. This is the dilemma of all man. Being removed of these reflections will allow me to do nothing for all of man. But I will receive heaven. Heaven is a lift of worries, for one realizes that the actions they take are to help a being of them and larger.

Is that is what is really important. For if a tree fell, it would make a sound. For if I left these comforts would it make a sound loud enough to make more of an impact as if I stayed within hell to help remove all? For a sound would still be made if I stayed of left, for I am within physics. But will this sound be loud enough? Only if my path to money and hell would cause such an impact that

all would see. For something put in motion must stay in motion unless an equal and opposite force is applied. By this I ask, would I make a large impact or would I be able to have a balance and have these comforts, but be able to remove the reflection through my art; physical or language. To live sane, and free is all I ask myself to do. This will become of me, but will the time before this become slow, rocks, or fast, light, infinity. In layman terms; if I choose greed, hell, time will move fast and I will forget of my reflections most of the time; if I choose heaven I will not have to reflect nor need to, for time will move slower and I will not be doing of harm but just of the cycle. Am I even able to choose?

Believe it or not human beings is as much like chimpanzees as they are like each other, 95%. Based on new findings and from the Human Genome project. Why do *Homo sapiens* think they can do all of these negative and destructive things to earth and have no reparations? Well there are reparations; they are killing their host, their planet. And planet earth is paying back, it is having natural

disasters at all of the places where humans are taking away from their host the most, the hurricanes in the Caribbean are trying to take out the oil supplies, at the same time wars have been occurring where the currently tapped oil supplies in the Middle East since the oil refineries exist. Evil is the absence of light, while good is light, and the absence of light would also be considered darkness or the color black. Look at most depictions of the great Ah, God, where it is white or light while evil, hell, the devil, is shown as a dark being. Look again where the word dark is used in a malicious sense. Oil is black; oil is evil. Most of developed nations current lifestyle is because of oil. Human beings bit into the apple, also known as taking from the earth and now the earth is going to pay. Life on earth is about ready to turn upside down unless free will exists.

### *Genocide*

Look at it from the behavior of species such as plants or other animals. Whom just like us act upon instincts. When one phenotype starts to become stronger, or is more able to achieve

energy or avoid becoming someone's energy, within a certain community this phenotype will start to reproduce more rapidly. This reproduction will cause for the systematic destruction of the other phenotype within the same community. It will appear systematic because the phenotype is then weaker and is being wiped out quickly. The stronger phenotype will then begin to reproduce and spreads it's own genes through out the community until another phenotype is developed from another culture within the same community or until another similar species starts to invade the community. A race, religion, or ethnic groups are all derived from the genotypes, or alleles, of the individual of a species. These are just a few of the phenotypes expressed from the individual. If every other species within the world commits these actions and they are laws of nature then why should human beings be punished for these actions, why should human beings become punished for most actions they act upon?

Yes, I do feel bad for these people but it is how things

occur within this world. They are just a species within the cycle. Human beings are far from the most important thing as we think we are. We need to stop many of our actions in order to keep from destroying earth and the universe. If we don't we will live in hell. There are two paths people can take; One live like an animal with your family and live within the natural surroundings, do not manipulate these natural surroundings and then you will find God. Path two: the path we are on now, the struggle for power through the use of greed, we search for God and think he is here but we are never sure, this is because we are running from him. If we are moving from him into hell we cannot see him and never will find him.

### *War*

All of the wars that have ever taken place are based on the struggle for human dignity. Human dignity is the fight between the rich and the poor, the fight between man and woman, the fight for resources to live. Human dignity is the reason most of the things are

not right, the things that we demonstrate through body language should not be creating this society. Human dignity is the social struggle of human beings. Carl Marx said that all conflict is a reaction for the fight of human dignity. Human beings think that their species is better than any other because of the different lifestyles that they live. What really can tell which individual has the best genes and which individual is the strongest and who will survive are the beings with the best phenotypes. The struggles for human dignity are the basic instincts for which to live to be animals. The fight as competing animals to live and our conscience showing who is the best trained in society. The strongest in return are really the people whom do not take the most from the earth and are usually the strongest physically. A conscience or subconscious decision is made during young adulthood as a human of whether you will take a hold of society and confirm and be a normal person and try to see whom has the largest brain space available to take orders and certainly the weakest brains to just sit back and ignore the truth of

who humans are and what humans do on their everyday lives. These weaker people are the people whom never become enlightened. The stronger both become rich and famous and may choose evil and greed. While the real strongest are the beings that chose to not give into temptation and live a life of enlightenment. This life of enlightenment includes a life where no excess resources are being taken from this earth other than what energy the being needs to live. A house of an enlightened one may be such as a cave, with plant and animal life throughout, windows always open, while they walk freely without clothing.

### *Enlightenment*

Enlightenment is not a word, just another word that human beings use to describe something. This enlightenment is a stage, a stage of life, that not many find, but all seek. Many think it is a search for a God, but for this cannot be true, for one does exist. Enlightenment is the knowledge of your actions is of what that matters. Not that one controls you, but that you are in control.

You first need to realize that a God does exist. For one, the being reading this is God. For if one did, he would be omni-present, he would be present. If one did exist, certain people would not manipulate this Earth to the good of wealth. In the process of manipulating this Earth, they in return enslave the beings that are not enlightened to buy these products. The unenlightened many are the ones whom think they have free will. They believe that they are in control. For no one is in control. But all is in control. All is in control of one and one is in control of all. For the pattern of numbers, or time, can be changed if the pattern is not of the best.

They are just the privileged few that have the education, which is unnecessary, but merely intelligence is the most important of qualities. They privileged few whom can either make millions, one shall say the ones whom can reflect on and comprehend millions. At times may be as a devil and bit into the hill to take the resource, or and enlightened one may live of no sold resource. They are able to live on their own. Really these enlightened few are the

few whom will survive, once everyone becomes enlightened of the actions that they do, only the few original few will survive. Not because of their money to keep enslaving everything around them, but they will know that they must escape this lifestyle. They will escape to the forest. The best forest is the rainforest. For the rainforest has all of the resources to live as abundant of a life as the privileged few currently hold, as the others wonder why can that lifestyle not be theirs. It can be. For all they need to do is give up everything. Leave everything and move. Move to the rainforest. Use the government they support, from their slavery, and move to the rainforest. Many will die, few will survive. But the few, whom survive, are the strongest. For this is the only way for everyone to be equal, and yet the strong survive. Both sides win. Left and right winged sides win. Where the left side will be able to become a tree and the right side will be able to stay as humans, or be the dinosaur.

The few that get to realize what needs to happen must not manipulate the rainforest, as the enlightened few currently do. They

must live without cloths, without the money, and without the luxuries, for they are there, and without the comforts. The lack of these comforts will only give you luxuries. For you will not have these reflections. For you will not have the hell of, what am I doing wrong, why can I not have that. For you will have that, you will not be doing wrong, and you will be on top. For build a house on the canopy on top of the tallest tree you can climb, and you will never need to leave. You will have the comforts that are only needed. Not of everyone else, but of yourself. Do not tear down trees to build this. Use the leaves to build it. For it is strong enough. For you are strong enough.

### *Love*

Love is the giving of one self to another. This is in a pure physical sense that is conscience. This love is once one genied being finds the best phenotypes and genotypes that that being is able to do a dance and mate with this being. In the human life this dance does not just include an original mating dance but also a mental

dance. A dance where both beings need to keep making the other being feel as if they are superior enough for that other being on mentally knowledgeable levels. One of the best levels of love that can be expressed is one in which one being is willing to give themselves to the other for a way of resource to live or for protection from a predator to live. This can be related to the Praying Mantis. A female praying mantis will mate with the male mantis and then after words the female mantis will kill the male mantis for a resource of energy in order for the female to acquire enough energy to reproduce the offspring and to live until energy is again available. This is one reason the female mantis has adapted the large claws and is physically larger than the male mantis. In human beings a male will dance for the female. This dance can be physically or mentally or both. Once the male wins the dance and is able to mate with the female and pass on his genes and therefore his consciousness, the male will then give his life to protecting his children and his mate. Within human beings the stronger males will also mate with other

mates in order to pass on their genes with as many mates as possible. If the time must come that an offspring or mate will be harmed for resources or from a predator the male will then give up his life for the female and offspring. This may be the lost of his life for energy for his offspring to live or from the protection of the predator. If the predator may win the fight then the male predator, if it may be a male of the same species, will then kill the offspring and reproduce with the female for the new male mate is stronger than the past mate for he killed the past male mate. The new mate will then also do the same process if faced with a situation that would cause him to fight for energy or the right to live.

The dance to win a female may include many levels of mindful enlightenment not just the physical dance. These levels include all of the levels of enlightenment that beings are able to achieve. The levels are individualism, family within their species, community within their species, nationally within their species, internationally within their species, worldly as multi-genied and

species, and universally. Individualism is the thought of a being that they live for themselves and themselves only. That their actions effect only their personal state and how they feel about themselves. The family level is the next level. For in this level a being will begin to see that they need to live for not just themselves but for their family also. They will protect their family and genes at any cost of themselves. For they know that their actions affect their family and their genes. They will act upon the approval of their family. The next level of enlightenment is the level of community. This is when a being will begin to live for the same species that they are but with the goal to protect the community that they belong to. A human being would see this as the local culture or city or county, even state or territory that they belong to. Their actions are based on the look for approval from the community as a whole. They will tend to follow what the cultural fad is at the time to fit in. They will still protect their family but will also defend their own culture or community that they belong to. This being will believe that their

way of life is the only and best way. Nationally will be the next step to enlightenment. For in this state the being will defend and fight for the being of their nation state. They will protect their nation for its beliefs and cultural values. They will die for their county just as the being would die for any level below this. This being would stand strong to the original guidelines set by the creators of the country and believe that it is the best way for a beings country to be run. These actions are based on the approval of their nation. Multi-specied worldly enlightenment is next. This includes all of the celled species within the world that they are aware of. They will stand for the equality of all cell-based life on earth. For the being does not want a being with instincts from cells to suffer from the destruction of another beings hand. They will die for the fight of equality within the world of all celled beings and will worship the cycle of life. They will believe in evolution from a point of predator versus prey. The approval of others will begin to diminish. The last and least occurring enlightenment is universally. During this stage a

being will begin to realize that all atoms that make up the universe are equal and that no differences in the treatment of any thing within the universe shall occur. This would include tearing up the ground for personal use, using a rock as a computer, polluting space, basically changing the path of atoms through technology or basically the use of the atoms in the universe for any personal use is enslaving of the universe. For the energy given to live is given by the waves created by the sun to live. No harm of any living atoms shall occur. That human beings are no different than the sun that gives them life for they are created from the same atoms. They will die for the fight of the universe and the stop of the abuse of the universe. These beings will love all that is within the universe not just their species, culture, family, or themselves. All beings will move throughout these stages during the different situation that they face in the environment but will not move forward beyond what they have achieved before until all of the elements in the environment have been put together for the next step to occur. For

if they are fighting for the universe they must be individualistic in order to control their body in order to fight but may move back up to

*Note to a Love*

*Every family holiday my family sets up a setting at the table, next to me, knowing that I am thinking about someone sitting next to me during supper. It has only happened the last few holidays though, for they know that someone is on my mind. Every holiday, someone is on my mind. This person changed my life!*

*This change was something completely unexpected. Something that I didn't even know existed until one day I meet someone. This change was about losing my mind. Causing for me to leave the cave and see what else is in the world, what else is out there. This change caused for me to leave my body for a while. Move through the stars and see how many universes I could move through. Only now do I know that I go deeper than anyone alive. By deeper I mean that I travel further than anyone has ever traveled. Everything I do anymore gets attention from the highest of the high, and I seem to shake the world up, further than they were expecting to go. Further than they even knew existed. But this is only important because of what leaving showed me.*

*After the trip I came to a realization that the energy can change, and that I can change it, but there is one thing constant. This thing I speak of is the true matter within life, it is the only thing that madders at the end of the day, and the only thing that madders as the energy changes. For this change is the only thing constant with everything. The energy changes as we make it change, but this matter never moves, has no ups, no downs. Just constant through life, no madder what I am doing, how I feel, where I am at, or who I am with. This one thing is always there. This one thing is love. I always know I have found love, and that it will never leave me.*

*The LOVE is here to stay, infinitely, just as the energy is infinite. This LOVE was shown to me when I meet someone. This LOVE was wished upon time and time again before I saw it, for I knew something was there but didn't see it, until I meet someone, one day. Then I knew it was true; then I knew all was true.*

*I also learned that everyone is connected. That every thought I think, that every word I say, and that every action that I impose is energy that is connected to everyone else, and also is connected to the matter that is the base of everything. Everything I do, say, and think is heard by someone else; also I hear, think, and say the same thing that someone else does. In a way like a lens is in front of both of our eyes, and that we each see the same thing. Only when we came together to see that someone else does, see, and thinks the same things as I do, did I get released.*

*This realization of the matter that makes all of life, caused for an extreme motion of fusion to occur, where two joined, but then split rapidly. This split was not wanted by either side, but was forced to happen. This was not a force that either wanted, but each made it logical in each's mind, which is really the same logical answer. Each needed time to move away, to see how much each wanted to be one and the same yet again.*

*I like to think that I am God, but really, We are God. For how can one person be God, when more than one see, think, and say the same thing. They are still of the same consciences thought, for they see, think and say the same thing.*

*Misunderstandings came our way, when we left, but back now I am. I am back for forever, for there is no other way, but infinity. We can work this out, for we have forever to talk about how. "So tell me what you thought about when you were gone? The worst is over, so now you can have the Best of Me. We are older, but we are still young. We never grew out of this feeling..."*

*The love is here to stay, infinitely, just as the energy is infinite. This love was shown to me when I meet someone. This love was wished upon time and time again before I saw it, for I knew something was there but didn't see it, until I meet someone, one day. Then I knew it was true; then I knew all was true.*

*I also learned that everyone is connected. That every thought I think, that every word I say, and that every action that I impose is energy that is connected to everyone else, and also is connected to the matter that is the base of everything. Everything I do, say, and think is heard by someone else; also I hear, think, and say the same thing that someone else does. In a way like a lens is in front of both of our eyes, and that we each see the same thing. Only when we came together to see that someone else does, see, and thinks the same things as I do, did I get released.*

*This realization of the matter that makes all of life, caused for an extreme motion of fusion to occur, where two joined, but then split rapidly. This split was not wanted by either side, but was forced to happen. This was not a force that either wanted, but each made it logical in each's mind, which is really the same logical answer. Each needed time to move away, to see how much each wanted to be one and the same yet again.*

*I like to think that I am God, but really, We are God. For how can one person be God, when more than one see, think, and say the same thing. They are still of the same consciences thought, for they see, think and say the same thing.*

*Misunderstandings came our way, when we left, but back now I am. I am back for forever, for there is no other way, but infinity. We can work this out, for we have forever to talk about how. "So tell me what you thought about when you were gone? The worst is over, so now you can have the Best of Me. We are older, but we are still young. We never grew out of this feeling..."*

*It is time to use the energy to place the matter back into our life!!!*

In a first world, industrialized nation, a being does not have to worry about where to achieve the energy to live or to have shelter. They get to have a jump start on the "Hierarchy of Needs" an Abraham Maslow theory. The first four steps of his hierarchy are, physiological, safety, belongings or love and esteem. The normal person reaches these four steps as long as no deficiencies prove to be so to prevent this. The rest of the levels are cognitive, aesthetic, self-actualization and self-transcendence. These steps are hard for

most to reach but many steps can help you reach this. Self-transcendence, also called enlightenment and the last step on Maslow's steps of needs, is when you finally realize that we are all part of one. We all effect even the smallest even on the other side of the world. We are part of one organism, the Universe or closer to humans, the Earth. And we give up our life to the help of this cause.

*A Priori/ Blank Slate*

Learning has two aspects of it, uncovering and learning. The uncovering is when you read books, of the past and present. You are already aware of this information, for it is embedded into your brain through the reproduction of your DNA in your ribosome and nucleuses in your cells. As your are introduced to this information as a newly formed being you become aware of this information as if it is new to you, but really this has always been there but not brought to your conscience. For your sub-conscience is the holder of all truth. People whom are more aware of their sub-conscience are thought of to be more intelligent for they can realize

the information presented in the past at a pre-sensory introduced time. For all information that we are aware of is true in one situation or another, for it would not be true if it would not be present. This contradicts Rene Descartes' Meditation where he states that we cannot trust our senses for they sometimes deceive us. Well maybe they do not deceive us completely, for what we now see that deceives us may have been true at one time in our family history. If you think you are a king in a purple robe then your family may have been at one time royalty and wore purple robes. Or maybe this purple robed royalty once attacked and caused fear on a past generation of this beings family. More study will need to be done to the past DNA family trees and this will show us a great deal of history of families and our human history.

### *Death/Meme*

You will never die. You are made up of DNA, which comes from all of your past generations in you tree. This DNA passes on with genes. In those genes lies adaptations that your past generations

have faced. These adaptations are the things that make you who you are by your actions. This inbred adaptations are also your conscience. While you go through your life you are reviled to a lot of these adaptations, such as love and fighting. You are also faced with new adaptations, such as mass wars in the last 100 years or learning how to use a computer. This you are also aware of also through your consciences. Therefore you passing on your DNA allow you to consciously live forever.

"Meme - a memory item, or portion of an organism's neuroly-stored information, identified using the abstraction system of the observer, whose instantiation depended critically on causation by prior instantiation of the same memory item in one or more other organisms' nervous systems. ("Sameness" of memory items is determined with respect to the above-mentioned abstraction system of the observer.)" (Lynch 1998, part 10).

### *Hell*

“Hell was paved with good intentions,” Anonymous.

Wow, so we do live in hell. Since we think that paving every part of the world is for a good cause. Why do we think this? Is it because using the oil in pavement is covering up the grass and dirt to make it safer for human kind? Does this not take away natural habitats from every other animal in the world? So by paving the whole world we are killing off all of the other life on earth slowly, including the plants that give us the energy to live. From the circle of life, we either eat plants, herbivores, or we eat other animals that eat plants to survive, carnivores.

Holocene extinction event is the name given to the current mass extinction of species on earth. This event is one caused by the savage use of mother earth by *Homo sapiens* for their own personal gain of greed and knowledge. The Holocene extinction event has occurred within the last 500 rotations of earth around the Sun. Estimated up to two million species becoming extinct within these last 500 years. Human beings may not be the only cause to this mass extinction but they are defiantly a major part. Their search for

knowledge and greed has caused them to tear down forests, pollute the ecosystem, and hunt for fun for parts of a fellow animal has wiped out whole environments or single species which have in return killed off multiple of single species. Hell is not many wars or the fight for life. The fight for life, war, is the essence of life. The fight for human dignity is the only reason we are alive. These actions that human beings take are the most instinctual and therefore living in a scared heaven.

### *Dreaming*

Sigmund Freud, the creator of psychoanalytic psychology, thought that dreaming was a way for human beings to be able to carry out their sexual desires. For this is true in a sense, for if you were afraid of sex. This would not have to mean that you are afraid to have sex but that sex intimidates you. For as discovered by Antti

Revonsuo discovered in a 2007 study with rats where dreams, which come from deep sleep known as Rapid Eye Movement, are created for animals to practice defense from fears or threats. These threats could be anything from the large cats that chased us while humans were in the Serengeti or it could be from terrorist threats such as September 11, 2001. It could also be from simple fears such as what you and your loved one are fighting about. In a sense dreams are there for animals to discover and coordinate all of the events in ones life. As your life progresses you are faced with more fears and events that your brain must now realize occurred to your senses and then you practice this event so you are better prepared for these events in the future.

As also noticed in this article of Psychology Today; children's dreams of monsters in their dreams make perfect sense. For these are the events that our ancestors have been faced with in their lives. Large cats in our beginnings and then other animals and events as time have gone on. If we look at different gene pools of

people, specifically their ethnicity, you should be able to have as much of an accurate picture of the past as anthropologists have found in their digging. Since these past events occur in younger children whom have not been influenced by many new fears they will show us the way to our past. In return this will show us our future. For time repeats just as everything else in this universe. This proves the theory of a priori ideas. For this shows that our genes therefore do carry on past knowledge.

All of the soft science of psychology is based on the environment of the person as they aged. Whether it would be Sigmund Freud and his psychoanalytic approach to human behavior. Freud had three levels of consciences or the id, ego and superego, which I will talk about again soon. Sigmund Freud spoke of an Id, Ego, and Superego. His ego was really or the most obvious of the behavior scientist of behaviorism, from B.F. Skinner, where everything you learn is from what you observe and your true actions can then be measured by your behaviors. Our behaviors are the only

thing that you can observe and therefore the only thing that nature knows of you. As humans of a similar culture, we can view what you think it should be or what you think. This is only possible through languages. Well, our Universe does not speak a language of ours so it does not know what we are saying but it does know what we are doing. The Universe cannot reason, only humans can. Actions speak louder than words!

The only reason that human beings reason is to make them feel less ashamed of the actions that they do upon this Earth and the Universe or the opposite reaction to the actions they achieve. For cells are the building blocks of all living things and our Earth is just a cell in the multi-complex organism of the Universe. Which is most likely just an organ, of a much larger organism. Just because the planet's rocks do not make a noise that human beings are aware of by their senses does not mean that they are not a part of the Universe. Just because humans cannot hear the Sun does not mean that it is not like the Mitochondria of our Solar System where it

gives us the power to live. Just because we cannot reach the other planets, does not mean that they do not matter or because most humans cannot understand that the Universe may be part of something larger, that they cannot see, does not mean that more is not out there. Just because they cannot taste something does not mean that it is not good, or because they cannot smell something does not mean that it will smell good or bad from their perspective. Just because one of the five senses are accessible does not mean that something does not exist. Or because humans cannot sense something does not mean that that sense does not exist. Just because they can touch, smell, taste, see and hear our Earth and its organisms does not mean that they can just ignore them also. It seems as humans are neither aware of what is real nor are they aware of what is not. All of the noise everyday covers up the truth of what is real and of what is not. For humans live in a fantasy world where anything that they can imagine is available to us, because of computers and abstract thought.

The rich see how lazy and weak they can allow themselves to become in this aristocratic society and then they continue to live a life where they take away from the Earth more and more until they become one of the richest men in the world and therefore take away the most away from this Earth. The rich are eating up the earth at an alarming rate and being worshipped again by the media and masses because enlightenment has allowed humans to know that they are a pathogen but need to reason with this thought by taking the weakest beings but strongest pathogens and putting them on a pedestal to make themselves feel better about tearing apart this organism of the Universe that they are part of.

What they really need to be saying is, be different, be rebels. For rebels are really the people whom people desire to be with, for rebels are really the people whom society looks after once they are gone, for rebels are the true people whom change the world. For rebels are really the strongest of the herd. The rebels are the real kings in the animal world. Rebels are the animals who do the

most amount of change in the world. Become a disobedient civilian. Live off of the instincts that human beings are given to because they are an animal. Run free, do what ever you please, do not become to entrapped into institutions and do not listen to the media. Live as a true animal will. Once human beings begin to live off of their instincts like everything else in the universe then they will feel free. Being free is heaven, living like a trained monkey and being put on a pedestal and bombarded with money to live is just another evil training you to take away from the earth as money greedy devils wish.

### *America the Beauty*

An Earth that we see as beautiful only when untouched, because we know that is how it should be. We all know that we should not be doing what we are doing, deep down. But because of

society we do it instead. "A person is smart...people are dumb... animals," Men in Black. I have seen many studies showing how good people will act badly if pressured by even one person. Society pressures everybody to tear the world apart, to try to be the most materialistic person in the world. I currently live in the most materialistic society the world has ever seen! America, no matter how great it is, is tearing the world apart faster than ever. Materialism and greed are the viruses that consume humans.

We, humans, go around and tear down all of our trees, fast food pollutes the very air we breathe with oil and burning of other natural elements, so that we one day will need special suits to walk around, or a new planet to live on. That is why we are exploring Mars so frequently. We are putting huge holes in the side of our planet so that we can have many things that are not at all needed to survive. With modern medicine we are making it so that, with enough money, we will be able to live as long as we want. Every generation looks younger and the likely age of death is increasing by years

every year. Today people are just getting out of school when 150 years ago they were dying. In 150 years we will be living till, 150...200 years of age. It is hard to tell how far we will let it go. But it will happen. We will soon be able to afford personal aircrafts for everyone in our family, just as we have our own chariots, automobiles, now. We will soon be able to travel to space in packs to visit our family on Mars. It may seem like all of this is far in the future, but 100 years really is not that far. In the last 100 years we have been able to connect each other at the speed of light. We can now view the world from our favorite seat in the house, looking at a box and lights. There is almost no need to go out and do anything anymore for we can do it all right now.

### *Cognitive Thought*

The cognitive evolution of the two to six year olds mind has much to do with pre-operational thoughts as the basic steps that the child develops into. Egocentrism, centration, focus on appearance, static reasoning, irreversibility and lack of conservation

are the six steps to the evolution of pre-operational thought. Other words a child that is around four, given the median, would think that the world is only what they see and that they can only focus on one thing. They think something that is taller must be older, that the events in their world don't have consequences, everything is the same no matter what you do to it and that the world never changes. Does this sound familiar?

Don't most human civilizations in history have this same perception, even the United States of America. We think that Earth and its life is the most important thing because it is all that we know is out there, that other races are not the same as the white man because they look differently. Human being see as the most intelligent animals, therefore the most important. We also assume that we can tear up the Earth and it is still the same even though it looks a lot different, with our huge cities. That polluting the air and killing all of the animals will never have any consequences. Also that the Earth is never changing or that we can never change it.

With our overpopulation we defiantly have changed the Earth, does it look like a huge garden like it originally was? To me it seems as most humans do not evolve from this pre-operational thought, but that we are just taught that the Earth is big but small in perspective in comparison of the universe.

### *Enlightenment*

Once we finally start to realize that we are all connected as one Great Spirit and start to see our lives in a larger sense. Not just what we do to each other but how we effect the largest and most important of thing, our Universe. We all affect each other in every action that we do, in ever word we say, every smile, or frown we give, we will one day finally realize that we do not need all of this technology to connect with each other, for we will know what everyone thinks and how everyone feels everyday for we share the same waves and the same air, for we all share the same life!

### *Music*

While playing with smoke today I noticed how music works. The faster I would move the smoke around the smaller the round bubble of smoke would become and the quicker the smoke would diffuse into the air. The slower I moved the smoke around the larger the bubbles of smoke and the longer they would stay around. This showed me that music works with the speed of the waves introduced to the atoms present. The faster and smaller the wave introduced the higher the pitch of tone would be or the faster the tone would diffuse into and out of the ear of the listening organism. The larger and slower the wave of introduced to the atoms would then create a lower tone that in return is the amount of time it would take for the wave to diffuse into and out of the ear of the listening organism.

This is also how radio and cell phones work. For the faster, higher, tones waves would be able to hold less information but will be able to reach the target faster. While the longer, lower, toned waves would be able to hold more information. This is because the

longer the wave the less force is being applied to an outside force allow for more clarity and because there is more space in between the points of deflation of the waves so that more information could be held within the wave to bounce off the wave as it preceded along the path.

### *Consciousness*

I just had the deepest meditation states of my life. A meditation where I broke my life and life in this universe down to the atoms that makes up our consciences and the Universe. All that human beings are is a connection of cells that conscious is really just a sense connecting in their mind. For consciences is really just the input and output of hydrogen atoms within the atmosphere of the Universe and a human beings mind. For if a human would die, their atoms would transfer to the Earth's ground then to the Earth's atmosphere, the atoms are then to be lifted to a new, higher perspective. Humans are then lifted to the perspective of Earth. For then perspective from the hydrogen atoms reactions are of the

perspective of the Earth's reactions of the atoms of hydrogen.

Hydrogen is used for it is the base atom. Its reaction is the quickest, easiest and most abundant within the Universe. We will not and longer be able to just this simple being of which we believe we are currently. For we believe we have free will, but this is just our sense of human beings evolution. As we evolve we grow more "intelligent' and therefore feel as if we are even more of just this one being. Were we really are this Universe. We are the input and output of the speed in which hydrogen atoms are able to react within our mind through the lungs and blood. This speed regulates our intelligence and thus is controlled by our evolution as an animal. For this makes no sense of why we, as human beings should be afraid to die. For we, at our death, will then justly be up-lifted to Earth or what human beings call God's perspective. For God is the Earth and the Sun, for Earth and the Sun is the only thing that gives us life in this being. And once the Earth dies we will then be released as hydrogen atoms into space. Once we are in space during

this “time” of our existence will then be slowed to the point that we will not be aware of our existence. For the reactions of the atoms will freeze with the true zero temperature that space consists of. During this exploration, gravity will then attract us to another planet and we will then become of this planet’s perspective. If we do not become attracted to another planet or sun’s gravity we will then float, with an infinite amount of time or forever until the ends of the universe, for it will only seem as forever because we will become frozen as this would freeze “time.” Time which is only the rate, again, that the hydrogen atom’s electrons are spinning around it’s own protons and neutrons.

This is our conciseness for this is how time evolves. For this is how we would have to be. For the universe was once nothing and then it exploded. Once this nothing exploded the laws of physics then separated and then we then separated consciously, and prospectively into different atoms. For we were once one, now we are many perspectives. The universe is now expanding and therefore

so are our perspectives, perceptively. More and more as “time’ or the speed of the expansion and collapse of the universe. This expansion and collapse of this Universe therefore is the speed in which the universe’s hydrogen atoms are able to react with there own and other atoms and spin around them. For once this Universe collapses it will become one atom and we then return to one perspective for we are currently different atoms but then we will be no different. In other words, no matter how far into the universe our atoms will expand only once the Sun explodes and causes Earth and our atoms to explore our mind will we be able to see more of the Universe. Will only then will we become Heaven and at the moment that we are able to grasp another heat source will we then become conscience of our being.

This will only be for the fact that we need heat in order to cause the hydrogen atoms to move and connect to each other. This process will become because of the diffusion and the laws of attraction. The attraction of high to low concentration of particles or

density of particles is diffusion. This is what gravity is also. For the less dense particles are attracted to the more dense particles and atoms. In an atoms term it means that the less dense electrons of one atom will be attracted to the more dense nuclei of another atom. This may also work with the hydrogen atoms to become attracted to each other for they are unstable and are trying to find this more dense atom but will settle for an equal dense hydrogen atom. This is almost such as to fool the hydrogen atom. For maybe the fooling of the hydrogen atoms are the ways that computers and other modern technology fool human being's minds. For instead of imposing true chemicals or other atoms within their minds they instead induce a sense that in return will still give them hydrogen atoms to fool the mind to react to the stimuli the same as if it was true, but not with the same maybe more intensity? Therefore computers and technology is evolving human beings to find more hydrogen atoms within the atmosphere. And the only way this would be possible is by speeding up the process of diffusion and the atoms of hydrogen.

The only way this is possible to speed the process and reactions of the hydrogen atoms is then by warming the atoms or causing their temperature to rise. The reason atoms need to be warmed and not formed out of nothing is one of Newton's laws or the law that something cannot be created from nothing, or that you cannot create something as simple as hydrogen atoms unless you have hydrogen atoms present. This is what has lead human beings to evolve to global warming and to become a virus.

## **5: Problems and Solutions**

### *Stabilization Selection*

There are many modes to Natural Selection including the stabilization, directional, and disruptive methods. Stabilization is the process of selection against extreme phenotypes such as the birth weight of humans of the sickle cell disease in Africa. This is completed where; such as with birth weight, lower birth weights

tend to die off easier. This is allowing for nature to get a rid of the individuals that would not naturally live easily with out a lot of work from the family group it may be in or with out the help of modern medicine. This is like the natural way of protecting the economy. For if ever child with an extremely low birth weight was born then it would cause a lot of stress to the families while being raised and stress on the economy by taking more resources from the economy just for one individual, which is uncalled for. This stress will be developed because the lower birth weight child will be more common to attract diseased and other natural prey, for they are from birth the weakest. The weakest naturally die off the quickest because they are the easiest to attack.

### *Directional Selection*

Directional selection is the process of selection against one group of extreme phenotypes. This causes the allele, or genes, to have frequencies of a steady change. This changes in frequencies allows for certain predators to not completely overtake a weak

phenotype therefore saving a population. If one, weaker, phenotype continues to present itself to a certain predator, that predator would start to develop their specific, stronger, phenotype that would allow for them to take over their prey or resource. This then would cause a whole species to become wiped out from another species.

Therefore by having a different frequency within the phenotypes a balance between the species and environments economy would occur. For then one species, or resource would not become density dependent and not limit a certain resource or prey to their species.

This in return allows for both species to become stronger by attracting more species to use them as a resource and allowing them to hunt for more resources. They then have to have fewer frequencies of specific phenotypes to protect them from more predators and allowing the species to procreate and to live on.

These fewer frequencies of phenotypes then cause a balance between one species and the environment as a whole. As if not only the strongest but also the best-balanced and most diverse species are

the ones whom survive the longest in nature. This may show why human beings are at the head of the food chain. For we are not only conscience of our strongest will survive side of nature but also of how we need to be well balanced and diverse as a species to survive. For the different human species are adaptations to their own surroundings and action. An example would be Africans are darker for they have been introduced to the sun more frequently than Europeans, whom live indoors, and they probably hunted in the dark more often because of this adaptation, they would be harder to see and it would be easier for them to hunt prey.

### *Disruptive Selection*

The last type of selection is disruptive selection, or when an extreme phenotype has selective advantages and therefore survives. This allows for the species, as a whole to develop stronger, for the weaker phenotypes would die off allowing only the phenotypes with advantages to reproduce. The stronger phenotypes then develop again to become stronger to stay balanced with the

surrounding environment and economy. They would have to develop different phenotypes while still expressing the same quality that was once strongest in a once balanced economy. This difference then in the economy and the ever-adapting phenotypes are the reasons for new species. After a long period of time where it would become a major change in an environment, phenotypes that are the strongest would not just affect one part of the species but the whole individual as time went on. This process would take many thousands of generations for the differences in the amount of and expression of the different phenotypes of a specific species within one environment. This again also explains the reason Africans are darker. For the strongest, darker, individuals will be the ones to survive and therefore reproduce. It would be easier for them to survive because they would hunt at night and it is harder for prey to notice them. The prey and predators in Africa may have been more abundant in the night allowing for humans to catch more food while being dark. The lighter Africans would die off because they are

unable to catch as much prey, therefore have less food, and without food they will die off. Then as some human beings moved to Europe they moved indoors and started to use agriculture during the day. This would cause the phenotype of lighter skin to develop. Not just because they were in the sun less because they spent more time hiding from the sun from the more allowed leisure time allowed from farming. During the day a lighter species would also be harder to see and therefore human beings would be less likely to be seen and hunted during the day. This would also allow for them to hunt easier for they would be able to catch more prey while not being seen as easily.

### *Stabilization, Directional, and Disruptive Selection*

#### *Within Human Beings*

Human beings having the increased frontal lobe has allowed for them to be able to be conscience of not only the strongest will survive but that their must be diversity within the species in order for the species to survive. The frontal lobe has

allowed for our memory to be developed enough to remember and ingest the information that we are presented to more than other species on earth. Allowing for humans to be aware of all aspects, that they are aware of, of the environmental and economical growth and adaptation has allowed for them to become able to manipulate the environment. This is why human beings tend to view themselves as a “God.” For they allow themselves to change the earth as they please and this control of an environment from a developed frontal lobe and consciences of the environment around them has given them a sense of a master of earth. For in a way they are for they can change the earth, as they want. This changing of the world can have many negative side effects if the species would take it too far from overpopulation or over use of the limited economy of the earth, just as human being are doing. If a species were to disrupt the environment it lives in it would cause many problems including excessive depletion of resources and mass extinction of prey and predators within the environment. This break in the natural

adaptation and evolution within the earth seems to be because human beings are almost too aware of the earth and are trying to stop the cycle and live within one period of time. For they are not truly aware of another time while living in the present time because of preoperational thought, or the thought that you are unaware of what you cannot see. This in return has caused human beings to eat away as much of the earth as they can during their short lives.

This eating away of the economy is due to overpopulation. The mass use of the economy is from human beings needing to reproduce a larger litter to live an agricultural lifestyle without enslaving other species. Thus then causing a decrease in the rise of population once slavery develops. Enslaving other species is the use of a species from training to do your work to survive or to gather food and resource with no more of a pay then the basic needs of life, energy. Enslaving was first raised animals such as camels, or horses. Then enslaving moved to other human beings and is now currently the fossil fuels that we suck from the earth like a virus.

These fossil fuels in essence are not the thing human beings enslave but the machines that the fuels give energy to. Think of a car as a living being, for it does not have cells but it does take energy and oxygen to run and it does emit carbon dioxide such as animals. This enslaving of machines now instead of animals is less cruel, for the machines do not know that they exist, yet, but it is still a form of slavery. Human beings may be die from overuse of the limited resources that allow them to live on earth. An overuse of resources comes from enslaving the earth and the life on it. Human beings are the only species on earth that does not completely evolve with the earth, but that try to make the earth evolve around their species.

If the human species does not have the wisdom or courage to control its numbers, nature will do it for us. What can/will I do to help control the population problems of the earth?

*Developed Nations or Communist Nations?*

There seems to be a lot of problems with any way of helping Homo sapiens and earth. When humans become as

developed as the United States their population tends to become stable yet they continue to tear away the earth as fast as any other culture of Homo sapiens. For once they develop they develop money and money allows for the individuals to buy the earth in a sense. Their money allows for them to buy a computer which use water, oil, metals, sand and trees. Just naming a few of the resources this nation would use in excess compared to a non-developed culture. The metals and oil are not even used by non-developed nations. So, yes, a developed world would cause for their population to decrease but it would also cause their consumption of resources to increase if no limitation would be imposed on the amount of resources that the individuals would be allowed to consume. But that is communism and no human being is supposedly happy in a communist state? If this would be imposed equilibrium might be achieved. There is one exception, that the over six billion people that still need to develop will just tear the earth apart in the matter of years if this would happen before

completion of development where to occur and the population would become over fifteen billion, or too high based on the limited resources of earth.

On the other hand if you chose to not allow any nation to develop and also cause the developed nations to become non-developed for the sake of not allowing human beings to consume too much of the earth. This possible solution for human beings would need to reproduce at such a high rate to be able to sustain the current population that many individuals of the species will die from human beings overcoming the K-point of renewable resources. This is how a communist world would be imposed. But is that invading too much into the privacy of a beings life, from a Western American philosophy? If the governing bodies would be the ones to enact these policies it would be an invasion of rights from the United States government's constitution. You would have to apply this concept for it would be on a higher, universally moral, ground then that of what one individual or even species whom believes is their

personal rights.

This theory seems to be the most logical and natural but probably not the most certain. For the United States has the most amount of power, nuclear weapons, and at the moment in time where something must be done about the population growth, or at the K-level of fifteen billion human beings or about 2050, the United States; with pressure from their individualized culture and democratic nation where liberalism rules as much as realism, will break out in war and destroy the nations whom compete for the most amount of resources within the earth's economy. For the strongest phenotypes within a species will survive. The strongest phenotypes seem to have migrated to the United States for they have the most amount of power within the world.

So maybe the United States should just kill off the other competing cultures of human beings and then would have access to a renewable amount of resources? This is inhumane and completely immoral, well maybe not in a universal morally state. For too many

human beings are using the earth at a rate faster than the earth can renew its own resources and if the numbers were to be drastically lowered human beings would be able to live within a naturally renewable earth. This would not go over well with any other culture of human beings or in the international governing bodies of the United Nations. This will also lead to world war three and a nuclear holocaust. If a nuclear holocaust were to happen it may not just kill other human beings in other cultures but all life on earth.

As we all just sit here and live our "normal" everyday lives and watch our Earth be destroyed and wonder why it happened then maybe most people would get the point. But just like everything in life, you do not know how good it really is until it is lost!

## **6: Peace**

### *Politics*

The political state of Turkey and the religious and political Kurdish rebels have been in conflict for the freedom of the Kurds to

a free nation state. For many call the Kurds rebels but I feel as that is a term that we should not use, for they are merely a group of a religious and political people whom do not agree with the ruling of a nation state, of Turkey. We, American's, were once these people but to the British Empire of the eighteenth century. We should take this situation to fit our own. The British Empire did not like that we were not agreeing with this situation, so they fought us. American's won this battle, in the Revolutionary War. American has since become the United States of American the most powerful and, richest country the world has ever seen. I am not saying that is the purpose of the Kurdish group. The British then allowed American's to grow on their own and they do have much influence on American culture. English is our native tongue and their parliament government led to the creation of ours. The parliament is now our Senate and House of Representatives. But we have also incorporated a dictator and table of lawmakers to our decision process. This is not meant to be a history lesson but merely to show

how giving the freedoms that the people want can also benefit your own nation state.

The nation state of Turkey has slight bias in the United States decision process. For Turkey is a major factor in the United States to win the wars in Iraq and Afghanistan for Turkey supplies a lot of the oil to run our war and also air bases for the United States to launch planes during the war.

The Kurdish group is also starting to progress into Iraq for freedom. This has two factors that many hurt the American troops. One is that the Kurdish group understands that Turkey is helping America in the wars and they may view this as a time to stop the wars and to get back at Turkey by attacking American troops. This can be hurtful to American's and their fight on terrorism and the fight for resources and to establish a diplomatic government in Iraq.

The Kurdish group may also try to grab hold of the lost Iraqi power for a power vacuum may occur. If a diplomatic government seizes to take hold in Iraq then the Kurdish group may

find this as a way to gain their own nation state and power of resources in the Middle East. This in return could cause the even more wars within the Middle East and also a longer war for the United States. For wars will continue to break out over the quick gain of power by a small group of a differently religious oriented people. The Middle East will never stop fighting until they discover there is no reason for them to fight for they should not be fighting to push their religion on other cultures but to accept them as the other religious group sees things. A war for resources will also persist over the fight over the control of oil. The Middle East has really only oil to give as a resource in the land locked states. With oil prices rising as they are, a nation or group could become rich quickly if they are able to suck it from the Earth at a fast enough rate. This could possible cause the stock market to crash. For this is a good reason to try to make the Kurdish group happy.

Making the Kurdish group happy will not make everyone happy. But we first need to look at what is best for the world

completely not just each group involved. If the Kurdish group does take power, and nuclear bombs really are present in Iraq, then a nuclear holocaust is just around the corner. We need to prevent the Kurdish group from gaining control of Iraq. To do this we must take a few steps. For our troops are already over in Iraq and Turkey so we to take a step back on the political ladder. We need to step back to diplomacy. We need to sit down with the Turkey Prime Minister, and Iraqi official and the President George Bush and have a major summit meeting. For talking I believe will be able to settle this dispute.

It seems that all the Kurdish group wants is a nation state were it may implement laws to fit their own cultural and religious beliefs. A Kurdish belief is that closer to a French and Communist mix of a belief. Closer to that of an Egyptian religion and following. This is where Turkey will gain from this process. For Turkey's own culture has been pushed and trained onto the Kurdish group for they have lived in this nation and culture for a while now.

Turkey will have an allied country with similar cultural beliefs to its own if they are willing to give up some land now.

The beginning of this warfare was that of a conflict over the original difference and growth of the original and now different Universes in which grew from the darkness, or zero, and became expendable each step till this reaches nine, or the white hole. This is known as an always inflowing of information in which shows one in which is has the greatest chances of efficiency. This chance having to occur also, for it will have to, but not until in the most efficient kinetic energy will the light be, and only be seen. This cause of being enforces, or begins time to be able to occur the fastest, and allows for a difference in the dimension in which a being is now attending. This difference is the height in which a being is able to differ than that of the group of any size of matter. This is saying that time rules the people, but the person is able to change this dimension in which they are acting, by the differences in kinetic and potential energies being applied. This, in modern society, is known

as weather or not a person would be in a warmer climate or a colder climate. This warmer climate is more sun, Ultra-Violet, visible, rays, as energy, as more Hydrogen-molecules in the blood stream would be present in the blood-stream, allowing for more Oxygen molecules to be attached to the more abundant Hydrogen-molecules and Oxygen-molecules to create water (H<sub>2</sub>O). This causes for more being to be present to the Optical-lobe. Meaning that the sight would be a stronger sense at the moment, or a dimension closer to the average person, or weight of mass, causing for a stronger ratio of diffusion in the infinite space of the Dimuniverse.

The Kurdish belief, Egyptian ancestors, or genetic history is known as the Pyramid capital in the world, which a Pyramid is mainly a triangle. This triangle is also known as a fusion of two parts to create a single member of equal parts, these parts create one part. This one part is also seen as having a child, or the recreation of any separate entity. This second entity is to create a longer period in time in which the first two could not originally create. This creation

is then again to continue. This again creation is the third part of the Pythagorean theorem, or the One squared, times, Two squared, equals Three squared. The One and Two create Three from and equal angled Pie shaped object. Once one Creates One from Two and creates Three in the shape and continuation of time and matter as of Pie, or a sphere is worked into the recreation of as the Diameter, in which is Pythagoreans answer. When they can be recreater, then do they last for an equation, equal to and greater than Infinity. While the Kurds are holding an Egyptian or Pythagoreans theorem, and the Turkey or Ionian culture or monism, for the triangle is the matter in life, the base of heart. Monist's are more of an Intellectual or Science state of conscious, or the outer-realms of the Average *Homo sapiens* in an Intelligence Qualitative exam. The Iraqis are more of an average being or intelligence, meaning that they have come from a Communist, or Tyrant, ruling over the people. This means that they see more of a Pie shape to being. These Pie shapes are of the Blue and Red colors of being, or Six and

Three, where the Green color is more of a Pythagorean, or mattering vision of light. The difference of the two different religions in the area, are of none. For they all are part of the same being of existence, but they observe more of a red or group, people, point of view. They are looking at the same thing, but in different points of time.

This Iraq will also gain from this for the Kurdish group and Iraq share similar religious beliefs. This will cause the new Kurdish nation to have more of a mixing pot of Iraq and Turkey beliefs and customs implied into the new nations constitution and culture. Iraq would again have to give up land to make this work. The land would be equally distributed between the two nations as to not make one feel as if they have lost more than the other.

The United States of America will also gain in many ways from this. The forming of a separate nation will allow for our troops, already in proximity to the nation to go in and search the area at questioned with United Nations approval. For we will be

entering the nation to start a new govern body. This will also allow for us to implement a diplomatic governing body. If the Kurdish group feels strong enough to cause this much of an uproar about their place within the two countries then they should fell strong enough about each other that a diplomatic government will not take away from their society but enhance it. For the people with the strongest ideas about their culture and religious beliefs will then rise to power. This would help their culture to grow in an international group, such as the United Nations. This would allow for the United States to get rid of the largest treat against Iraq, allowing them to continue with their plan to search Iraq with United Nations approval and also settle down some of the conflict in Iraq.

The best reason this will work is the fact that the world is coming to a one international government body or a uni-power world. The United Nations is gaining a lot of power with in the world. They are an International non-government organization that has allowed for all of the nations within the world to have a say on

many rules and actions around the world. Although not really equal but theoretically the United Nations has equally distributed power allowing for even the smallest, least populated, nations in the world to have a word in what occurs around the world politically. This will come to power with in the world and then the Kurdish rebels will have a say in what occurs around the world, if they had their own nation. This would also allow for Turkey and Iraq to have words in what occurs also. Ever nation will come a victor politically, economically and peacefully.

*Diplomatic Solution In layout form:*

- a. Keep the U.S. and U.N. troops as they are as of this date.
- b. Request for a summit meeting between Turkey, Iraq, Kurdish groups, United States, and United Nations.
- c. At the Summit meetings: Show the request for the loss of land of both Turkey and Iraq, at equal

- distribution and have all groups agree on area.
- d. Once requested area of land is agreed on; discuss type of government available to the Kurdish group. Pushing diplomacy.
  - e. Once type of government is agreed on: ask for U.N. approval to intrude with troops and apply the government within the nation.
  - f. Help set up elections, if diplomacy is agreed upon, and let the new nation start to develop economically with rules from the U.N. and other governing bodies.
  - g. Once government and economy are developed; let the Kurdish group join the United Nations.
  - h. Watch the new nation just as any other nation within the world, and United Nations.

*Soul*

Lorenz is not what one would call a philosopher, but he is

what one would call a gatherer, or one whom searches for information. For he is merely gathering Socrates' philosophical ideas and trying to construe them so that the ideas in which Socrates is trying to portray is relevant to the language of the people.

Throughout the whole essay, he [Lorenz] is speaking as if Socrates ideas were portrayed to be that of a larger group of thought. This larger group is that of people, and not the person in which Socrates is and which is the only reason in which Socrates is even written of today and is immortal. Viewing the first fallacy with his paper will help to illustrate how the rest of the article should be portrayed, as the being within one Soul, however, not everybody is able to see the ideas or the knowledge of love, infinity, and spirituality.

Lorenz writes of how Socrates noticed three, psychological states and activities, parts to the Soul. The first part is that of which is the Motivator of the soul, and the people [as Lorenz states] but as I call the person. The second and third parts of the Soul are of the Constitution. These include the desires, which is the Motivator; and

the thought process, and emotions, which are the Constitution. Socrates states how these parts are not just psychological, but they are what is desiring, thinking, and having emotions. The Soul is not just a process of desire, thought, and emotion; but the Soul is the actual desire, thought, and emotion; as in the matter in which the desire, thought, and emotion are composed of. The soul is what is in control of all the desires, thoughts, and emotions. The Constitutional parts of the Soul are also broken down into rational and irrational processes. The rational process is the thought process in being, which builds to the irrational process, in which is the emotions that control ones life. The Soul is that of what people call God. A spiritual person would call the Soul consciousness. Socrates argues that the soul is the matter in which all is created of.

An example to show the Soul would be of a love within ones life. A person has a desire when they meet another person with an attractive genetic makeup. This desire is to reproduce with the other person in order to pass on one's genes and to have a longer life.

Once this desire is noticed, a thought process has begun. This thought process would be of the other person, in which one has a desire for. This thought process of the desires would then lead to emotions. Emotions can be up or down. Being up is the best, as long as one is up in order to help that of all, and not of one; unless one is the one that will help all. If the desire was strong enough, the thought process deep enough, and the emotions are up; one will have found themselves and the other person, which is a best friend and lover. How is this the soul? Socrates believes that in order to have these motivational and constitutional actions a mover must have caused for these to occur. One can argue that the natural continual process of time has allowed for these two persons to meet. This is why the persons have met. One can also say that the environments in which the two persons began within contact of the distance in ones life was similar enough to allow for the similar phenotypes and genotypes to become released. This release of two similar codes of Deoxyribonucleic acid, DNA, have caused for the desire to begin.

A question is aroused though, why did these two meet? Did both of these similar codes desire, at the same period, to create a similar relationship with someone? Is there a fellow larger than myself in control of the whole thing, and he said that we should have met? It is highly unlikely that people are in control of their lives, but the people do have ones in control of them. That is where the notion of a God was created. In order to keep order among the people a larger mysterious being must have been said to create people. For if one created such, one can destroy such. This plays on the thought process of the soul of people. This thought process is also known as rule, or fear. But if one says there is a God, must such be true? Yes, it is. I am my own God, not the President of the United States of America, or the Pope.

Many of Socrates' arguments, when translated by Lorenz, are to the conclusion that the soul is of all. Lorenz states that the people, not the rulers, have Soul and the Soul are the thing that makes the decisions. If this is true then a Soul can be enslaved, even though

Socrates states that a Soul cannot be enslaved. For the people of the democratic nation are still enslaved. They work for the puppet masters, controllers of the money, all around the world; where the people go to work and build products in which they find beautiful, but that these products are really the ugliest items. Therefore if the people are enslaved, the Soul is enslaved, and if the Soul is enslaved the Soul cannot belong to the people. The Soul must belong to a few chosen ones, and that is all. These chosen few are the enlightened ones; the few persons of the world whom are out of the cave and get to enjoy an infinite life of pleasure and pain but without rule, except for the rule of themselves.

Pleasure and pain are great while fear is the devil. Pain is the anger in which one feels throughout ones life, this is also known as downs. Pleasure is the desire for sex and reproduction of all, this is also known as the ups in life. Fear is the rule in which one may abide by, this is known as slavery. Democratic societies as meant to be that of the free, but slavery exists still within those worlds.

Slavery of people, matter, and energy, are the actions in which humans participate in that are of the bad, or evil.

All of the pain, pleasure and rule of the Soul are all lead by appetite and reason. Socrates states on how these appetites and reasons are what the Soul is made of. These are both the energy and matter in which all is composed of. Where the energy is that of appetite, or pleasure, which is sexual desire. The Matter is the reason, for the fear, or the rule of the world. The last part of the Soul, according to Socrates is that of anger or spirituality, which is also known as pain. The reason he would say this is pain, for one would need to find love in oneself, the trees, the air, and the fire in order to feel love and to reach the level of self actualization, which is also known as spirituality. One would know that one is one and not many, this alone makes one feel lonely at times, until one comes to the realization that all is one, that all is love, and that life is infinitely up and love!

A large argument in which Lorenz challenges is that of the

demise of the Soul after death of the human body. The question of whether or not reason is able to answer this question. Reason, as stated earlier, is the matter in which all is composed of. Reason is the pain in which one feels within a life. This pain, or downs, is the only way to tell that one is alive and not just dreaming. For if one would act upon merely pleasures or sexual desires, one would think that one is within a dream the distance in which one travels. The matter is not shown to be infinite, for one has only come to equations in which prove energy to be infinite. Energy is the composition of matter and light; the distance in which light is traveling. Therefore one, if getting that pleasures are forever, must also assume that pain is forever also. For energy cannot be energy without matter. As Socrates and Glaucon argued, one cannot be one and negative one if one is equal to one. Meaning that one cannot be up and down the whole distance if one is up the whole distance. By one, I mean up, and by negative one, I mean down. If one is up the whole distance than one would feel as one is in a dream. If one feels as one is in a

dream, one will feel as if one has no rules. If one has no rules, one has no fear. If one has no fear, then one will last forever. For one being up, is one being one, and if one being one is one being up, then one can and will be up for infinity. The only thing that may stop one from being up for infinity is the spirituality or anger. This anger may be for many reasons, but one must assume, as Socrates, that the anger may only come from the pain, pleasures and rule within one life. If one has no rule and all pleasures, one cannot have pain; therefore one can be up forever.

There are many things with the human body, or embodiment, in which can affect being up or down. These are of the health of the being, or basically the efficiency of the energy flowing through the body of the person. Where being up correlates to a healthier, or more abundance of hydrogen molecules present, within the brain and body of the person. Being down would correlate to the lack of hydrogen molecules within the brain and body of the person. This shows people on how the development and enslavement of

technology is allowing for a more efficient life, but a less efficient body and therefore a more down lifestyle and feeling. For technology does not allow for the human body to exercise such as other animals, and this lack of exercise is causing for the body to be less efficient with the process of the sodium bonds between the hydrogen molecules to react between each other and allow for the energy to flow efficiently and quickly threw the body.

The question of the Soul needs to ask not about just human beings, but to all of the Dimuniverse. This includes the stellar, or cosmos, objects of the Earth, Moon, Sun, Planets, Solar Systems, Galaxies, and Universes. Do they have a Soul? They must. They all are composed of energy and matter, and if that is all the human's Soul is composed of, one must assume that the Dimuniverse must be composed of a Soul also. Actually the Dimuniverse must be composed of the same Soul, one Soul, the Soul in which I see many times within reflection. I say that the energy and matter that all is composed of is present within the Stars and Universes just as it is

within the human body. The Stars and Universe are actually composed of much more energy and matter than the human body. One must correlate the amount of energy and matter that correlates to the presence of the Soul. This presence will be more conscious the more the matter, and the more the energy in which is present. Meaning that the Earth, Stars, and Universes are more aware of the true beauty of life than humans are. When one is able to control time [energy] of all conscious, by turning the knob, and one is able to affect the matter, by movement of it all; one is that of God, one is that of the Soul.

### *Education for Virtue*

Education has a lot to do with diplomacy. For why educate all if there is nothing to learn. Well, there is still a lot to learn, but the question is, of which way would you like to learn such. Basically do you want becoming, or do you want being.

Education is all for he basis of teaching the masses of the destruction that they seem to want to cause. For the hope that a few

enlightened ones, or ones whom understand, would take control and put consciousness into the correct dimension of existence. There is hope by many that we will allow ourselves to being. Or that conscience would be not of only human beings, but of the actual stars, galaxies, and in the correct dimverse, or a collection of ten Universes, or organisms that are the basis for consciousness within.

For if you would want to be of tyrant behavior, then one must have the constant flow of information to stop. For if one would be a tyrant they will allow for human beings to create, a time flow, but would not allow for all of conscious to be, for it will end. This will begin with human beings becoming a computer then trying to become the stars with only visual, or one, dimension. For if one would not educate of the dangers we are about to face, one may be able to stop becoming, and be!

Education is at for the edge of the tyrants. For these tyrants, or enlightened few will become unless they chose to be. But one must loose slavery before one will be able to be.

## *Knowledge*

Within a Platonic society knowledge would be given to that of the Rulers and the Guardians, or for those selfish view in which they must keep the knowledge from the people. For within a Plutonic Republic the leaders must keep this knowledge from the workers below, for they need not know of all. For they need to know of their jobs and that is all. The reflection and sight of another kind of life is not needed to be given to the lesser beings, as a Plutonian may see. These sights at the light will just cause for them to be lazy, or not care of the Queen's commands. For these people only want to be leaded. They want to be leaded by God's knowledge. Where God is only the person in charge.

God is myself. For one must understand this knowledge. This knowledge is intellect of the sciences. Intellect is the understanding of what you are saying and what it means. Intellect also knows when you must say the things that the people need to

hear in order for them to work, in a Plutonic Republic. Where you need to say the correct thing in order for it to be noticed again in another distance in time. For intellect is how one must use what, when and where, in order to talk to whom one must talk to, in order to receive the answer to why. I say an answer to why for when one has knowledge, or intellect, one also begins to use the way [as said before with the whom, what, when, and where analogies earlier] to receive how one would want it to occur. Once one has received what one knows how to receive, one will know then why one wanted to receive it. For then one may ask the questions of why one would not have wanted to receive what one has received. After why not has been asked, then one may act upon why not to make it what one really does want, after the consequences have been realized. Then one may be able to prevent the consequences, while still enjoying it, and at the same time have both it and injustice from the consequences of it. Basically infinity and up at the same time!

## **7: Justice**

### *The Just or the Unjust?*

Just as in every question there are usually three sides, a positive, a negative and a neutral. The argument at hand is the three opposing views. The negative would be that the just is the person whom does everything for it self; the neutral is the just is the person whom does everything for the betterment of all; the positive one is which the just is the person whom has everything given to them.

The negative view is also known as a tyrant. These people live the worst lives, for they have the most amount of money, but they also have recognition of life and how their actions react. They know that their actions may kill it all. They suffer large ups and large downs. Why would one even wonder if it would? Let alone recognize the problem at hand, in order to fix it!

The neutral person is one of whom does as they feel is the right thing to do by what their slave owners say in which it should be done. They go along their life, thinking nothing is wrong, nor should they care, for they do not even know they are alive.

The positive person is one in does nothing, as in he has everything held to them. They live up all of the time. Food just comes, life moves on, and they never see, nor care, in how things are changing and why must we choose to not be.

### *Reflection*

Who is just? The tyrant, for at least he recognizes; the neutral for they think everything is just all right; or the positive who may never come down, and always be up.

What is going on? The human race, is that of a devil in the sense in which we are destroying everything on the seek to see if it really is true. Of course it is true, for all is true!

When is this going on? Everyday, all around me, trash and plastic I use for my “normal” everyday life, is the slow destruction of all.

Where is this going one? At work, anywhere where I go and I must do things that are using resources that are not essential to my survival.

How is this going on? We allow our selves to become of this through our communications, and all of the knowledge that is always being enlightened to me. I manipulate the wavelengths and torque levels of all of the energy around me.

Why is this happening? For there are three levels here, meaning that someone must be in charge. The question of which is the one, positive or negative, that I will ponder forever. Either way it is the focus of doing what is best for all.

### *State of Justice*

Justice would take two ways: one for Act Utilitarianism, and one for Ruler Utilitarianism. Many would see this more as the difference between Eye for an Eye and Prison. This could more modernly be seen as the Death Penalty argument. Where Act Utilitarianism would be for the death penalty, or Eye for and Eye. Ruler Utilitarianism would be more for the justice of the mental game, or prison. Basically, Act Utilitarianism is one of being, where the Ruler Utilitarianism would be more of becoming, or

reflection.

Justice within a State for an Act Utilitarianism would be one in which justice is fully served, based on the premise that one is responsible or guilty. This could be seen in many ways such as, if one would take all of the food from a store, that person, when determined guilty, would never be able to have food again. Therefore the justice is served. For the person responsible for the missing food for all, would now have none for themselves. As spoke of earlier, one in which is act utilitarianism would be in favor of the death penalty, for they think justice shall be served. Basically they believe in a finite Universe and evolution.

Justice within a State for Ruler Utilitarianism would be one of no justice ever being served. For by the belief of Ruler Utilitarianism would be that ones reflections would be justice enough, if found guilty. For the reflection, or thought process, of the past actions, how the actions will affect the future, and how one will learn from ones actions are punishment enough. The fact that

one was able to learn from their mistakes is enough that one would be able to fix what may have been harmed. If one is able to fix such problems then would does not need to have justice thrown upon them. Basically Ruler Utilitarianism believes that it is infinite and that free will exists. Even if one was infinite, then free will does not have to exist for one to have no justice.

The question of justice is that of one in which everything matters. If one was found guilty shall they face full consequences or are they able to learn from mistakes and fix their mistakes. The question is only answered if all is true, and therefore infinite.

### *Tyrants/Tyranny*

One may think of a tyrant as one whom does everything for oneself, without the consideration of others. But this is of an evil look at a tyrant. For ones justice implies more to their actions than that of a stereotype. As Plato states a tyrant has a democratic origin (Plato; Page 254.) For this must be true for the reasoning that one must be of intellect before one is able to reach enlightenment.

A democratic man is one whom sees all as equal. The people out of the cave, the people on the strings, the trees in which give us life, the dirt in which we walk on, and the rocks in which we build from are all equal and made of nothing more than anything else. For this is true in many senses, for visually one sees all these things, and how could someone whom sees all these things think anything different of it than themselves. For one sees oneself also.

Tyrants are that of a more advanced being. One whom takes into affect the democracy of all, but also looks at what is hurting anything else within this sensory objective, known as life. A tyrant is one whom has all senses, and uses these senses to have a utopia of a life. Ones behavior will be that in which is looking out for beings of a much larger sense, such as the earth. But in order for these behaviors to act, a tyrant may have to make the situations around one to fit into the path in which would cause for a democratically better world. One, tyrant, may like to help the earth to stay healthy, but the only way to accomplish such would be to

remove a species from the planet, or at least change the way a species interacts with the planet; such as using solar power instead of oil power, to generate energy for human beings to have technology. A tyrant would be best if one was in charge of the energy source or in charge of the laws of the energy source. For this allows for the tyrant to decided, when needed, to stop or slow the amount of energy that is being produced. A tyrant is a gifted, enlightened one, for they are aware of their actions and that of other phenotypes within the beautiful world.

*Warfare: Why and Why Not*

*Why Human Warfare.*

The question being asked is what are the difficulties with the hypothesis [anthropologists have proposed that the function of warfare in humans is to limit population density and prevent overexploitation of the environment.] On a political sense there are two different ways to see this subject, but like everything else in life, there is a true answer. In order to discover this answer, one must

look into the biology of a human species in comparison to that of its host organism, Earth; one must also look at the physics of war and discover the reasons for the beginning of wars and the costs of a war.

Human beings, *Homo sapiens*, are the most dominate mammal on the planet Earth, and in reality the most dominate, purely abiotic, species in this Solar System. I may say this coming from a human's body, but the reason's why will be explained shortly. For human beings have characterizes exactly like every other species in the Dimuniverse; they abide by the same physics as every other being, and they have levels of consciences like every other being. Human beings are made of the same quantum mechanics that every other species. These mechanics are scene as numbers and colors to a few select people, while the rest see everything as lights and sounds. For the lights and sounds, I am sorry. For the few whom are able to see the true beauty of nature and of life, they see the Earth as a more dominate species than

themselves, but understand that they affect the Earth in ways that no other species, other than Earth, affect it.

Warfare now is scene as a part of being, in which every other species par takes in. For the bees fight for whom lives next to the largest flower field, and the Earth fights with hurricanes and tornados to fight off the pests that may invade, and likewise with humans, whom fight currently for who lives on top the largest oil fields. With the new green invasion, the next wars will be fought on a field of silicon, or poly-silicon. Human beings fight, just like every other species over the best survival. They all fight for who can be the most efficient. This is just pure physics thought, for movement from the most kinetic energy to the most potential energy, and then the most potential to the most kinetic energy, is just the opposite and equal reaction in which Newton spoke of. War is inevitable for survival of the fittest. If human beings wouldn't fight, we would overpopulate the world and cause for a horrific amount of natural disasters, for the Earth would be trying to keep us under

control. When one thinks of the Earth, and all other phenotypes of life, as just bodies like a human being, then all will understand.

### *Why Not War?*

War is very costly. It can cost billions or trillions of dollars to run for a year. This is equivalent to the cost of running a medium sized, one hundred million people, for a whole year. War can be as costly as the whole Earth, or even the whole Universe, with the technologies that human beings have today, the atomic bomb. But when you take in affect the opposite and equal reaction, when it gets destroyed it returns to a state further in time. Like moving through a dimension, or backspacing and then re-typing on your computer. To a human being, war is expensive, to planet Earth, war is even more expensive, and to the Universe it is even more expensive. But to all of it, war is like everything else, infinite. The energy it takes to create is just like matter, infinite. There is nothing to worry about, from beginning of the motion, to the end.

## **8: Natural or Un-Natural**

### *The Natural Versus the Un-Natural*

One of the largest questions one could ponder is that of the difference between natural and un-natural processes. This may also be considered one of many other questions; evolution versus free will, up versus down, left versus right, monism versus dualism, and positive versus negative.

*What is meant by natural and un-natural?*

Natural is the normal processes by science, of the world and the being. Plato uses physics to help determine what would be considered a natural cause, of action. This could be the motion that the individual expresses through the distance in which they are traveling. Something as simple as a thought shall be considered a motion, and something as complex as the Big Bang of the Dimunverse shall also be considered a motion. Hypothetically they shall be considered the same motion. For one would not have this thought if one was not within this dimension to begin. I understand that the mass may be different, and therefore the time in which the

action would reach consciousness would be of a larger gap. This larger gap is caused by the differences within the distance that the energy would potentially be able to obtain, the point in which one is conscious within the spiral sphere of time at the current moment, the past moments, and the future moments.

Un-Natural is the process in which, by thought, a certain amount of matter, or energy, would have moved within the distance of the potential energy. The most common phrase to describe an unnatural process would be Free Will. Plato uses the point of reflection to express how one would be able to control the current moment. Reflection is the process in which the being is able to think about another subject, or another moral problem, or another question, while information is being introduced to the being. Almost like the processor, energy producer (mover of motion), is able to have many programs running at one time. A good example would be the talk of different kinds of animals and their relationship to the personality types of different human beings, such as a feminist

could be considered a cat, while a politician could be considered a rat. During a conversation between people, they would talk to what is their favorite animal, but a person would watch this discussion and determine that the female in the dialect is a feminist because her favorite animal was a cat, and that the male in the dialect would be a politician for he said his favorite animal would be a rat. One could assume that knowing this information of what the people are like, the person would be able to direct the rest of the conversation with information that would cause for both the rat and the cat to fight, or to love, or one may say that the person would be able to direct whether the cat or rat were up or down.

### *Why Natural or Why Un-Natural*

A natural process would be one of a monist's beliefs. A monist would be a person whom understands that everything that one may think, everything that one may act, and everything that one does not act are all part of the same consciousness and therefore part of the same matter. The only differences, and the reason in which,

events occur at different moments, is for the distance in which the energy has traveled will change based upon the amount of Kinetic energy given, and the amount of Potential energy available. A natural process would also be known as evolution, a theory made extremely popular by Charles Darwin, but two thousand years after Plato, Socrates, and Glaucon had this conversation of whether free will or evolution exist. The reason one would believe in evolution, and that all is of the same mass, but of a different amount of energy, is if one would reflect. For when one reflects, one realizes what has occurred, what is occurring, and what will occur. The only way one may feel at all, an up life, would be if one would completely believe in oneself. For if someone doubted any thought in which one had, one would not be able to fulfill ones dreams. If one would not be able to fulfill ones dreams than one would not be alive. For if one has dreams, one is alive, for one is conscience if one is feeling any senses. If one is alive, one must feel up about them. If one would feel up of oneself, then one would be able to fulfill ones dreams.

Therefore if one would be alive, one would feel up, and if would be up one would fulfill all of their dreams as one was alive. For your life is a dream. If the process is natural then ones dreams where already determined, and if one's dreams would be determined, then one must feel up, for one has no other choice, for the distance is already planned out, before one has a chance to change such path. One may also be called Ruler Utilitarianism.

An Un-Natural cause is also known as free will. Free will is someone whom has awareness of the events that occurred before such, and to the moment of such decision. The reason one shall consider having that knowledge before such event an important thing, because if one shall know of what is to come, and what became, then one shall know if one is able to change the event that is occurring or about to occur. There is one dilemma that this analogy has, and that is that I stated that you must know the future. Well the future cannot be planned out if free will exists, for if time were pre-determined then it would be evolution. Therefore in order

for there to be any un-natural causes time must only exist as a figure. A figure of an imagination, mainly those of the people in charge to keep order to the people whom are below them within order. But time does exist. It exists as a motion threw a distance. A distance between one space, that just happens to be ten dimensional, for it is composed of ten numbers of which make up everything. So if one was aware of what was happening currently but did not know of what is certain to happen, but of what could happen, they could change the future and make it better. This could be betterment for all, or betterment for one. Where the betterment of all would be injustice, and the betterment for one would be justice. The only way free will would be able to exist is if there were other dimensions, for time does exist, and the only will one may have is of which dimension they would will themselves to be in, not actually the whole thing. This could be considered Act Utilitarianism.

*Why Not Natural, Why Not Un-Natural*

Why not natural causes could only be considered if nothing

was natural. If there was no initial mover, and no motion, there could be no, what humans consider, natural causes. If there was no initial mover, then there would be nowhere the motion shall become to. If there would be nowhere for the motion to go, then there would be no path, and if there is no path, there is no way there could be a natural cause.

Why not un-natural causes must be considered if we are saying there is an initial mover. For if there was an initial mover than this must all be natural. For if something natural did caused for it to begin, and it is still here, there must be from a natural cause. If we take into affect that there was an initial mover, then one must assume that the initial mover was that of a natural being, for if all is natural all must be created by nature.

Glaucon believes there is an initial mover, and that there is evolution, or that all is already determined. For Socrates believes that there was no initial mover, and that all is to be determined. The question now is which is being? Thinking, like Glaucon, that all is

determined, and acting in such manner; or thinking, such as Socrates, that nothing is determined, and acting as if you can change it all. Being is acting as Socrates, thinking one can change it all. For even if one cannot, it is the effort and thought that really count, since you will at least be a person and live forever if you act as if it can be changed.

Free will is essentially the question of whether or not we are just predetermined genes or if we have thought of our future. Free will is being able to control your future by being able to react or act differently in different situations. The information age that we currently live in has brought up many new questions to human's existence and our reasoning for being here with new sciences. Many people use to think that we are here because a God, or Ah, has put us upon this Earth to watch over it. While today we believe that we are here from determined events over the past four billion years.

We do have reasoning and we can manipulate our environment to fit how we feel safe and true. This in return allows

for ourselves to control our own evolution and of that of the world. We must be determined to create the best of the world though. We must try our hardest against temptations to evolve to the best being that we can be, physically and psychologically. This theory shows that free will exists essentially, but with limitations.

All animals may have free will, for human beings are animals. We are made of the same cells that other mammals and animals are made from. We breathe the same air to live and we have the same processes from digestion to thought processes. The same neurons are formed and the same myelin is produced in animal brains as ours and these allow for our brains to interpret the information from our senses and process this information to know that you are reading this paper. But the only reason we can read this paper is because we were once shown how to take these different letters and put them together into words and then take these words and put them into sentences and then take these sentences and form paragraphs, etcetera. This shows that we have free will because we

can be taught information and the information can be manipulated.

B.F. Skinner, a behavioral psychologist states, “give me any child, and I will be able to turn them into the greatest pianist, athlete or what ever you may want.” Like all animals we can be formed into anything we will want to be in a psychological, and philosophical senses. This process will have to have certain events to occur at certain times though. It depends on the time that a certain part of your brain is developing the fastest and the most amounts of myelin and axons. When the right piece of your brain is forming you need to enhance this time. For the critical period can result in the best results if used correctly. If you enhance this time correctly, such as teach an instrument between two and four years old, and also two languages between two and six years old and you will have great results in many fields. For teaching them the instrument will give them a greater IQ and better math test results. While teaching them two languages may be slow at first but it will grow the child into becoming multilingual and therefore give them a

greater theory of mind and the real intelligence, knowledge of what else is out there. This shows that your genes are pre-determined but how you enhance those genes by the events you chose to do can enhance or de-evolve yourself.

What I am trying to say is that free will is out there but with limitations. For you can only grow your brain and body to a certain criteria based on your family history. For genes do play a role in how large you may be able to grow your brain and body but they do not entail to how you use or harness this.

Many actions that a human being takes is based on past events and training from these events. But animals are able to learn from these mistakes and therefore are able to choose how to act upon these events. These changes may show upon the next time being faced with this stressful event. Showing that repetitive, physical training may not be necessary. New dream scientist have shown that dreams are used to practice stressful situations so once taken upon the situation you are already trained to act as necessary,

this would be physical training to the mind. Human actions maybe corrected with out sleep being between incidences with the situation being corrected during the second time. This shows that we have chosen to correct the situation without having to practice it within our minds and that we can choose that the situation needs to be fixed and how to fix it, cognitively. You may use past knowledge and adaptations from your DNA. Which is embedded on the chromosomes and then passed along as your DNA is passed on generation to generation. Showing determinism is a step but cognitive thought then follows with free will.

All events from the world are results from other actions, for each action has an equal and opposite reaction. How you choose to react to this action causes another action. This action can result from past training but this action may also be thought out and therefore you are able to have free will. Actions related to physical senses are taught to look, hear, see, and feel as a certain way from your birth and a priori thought from genes and past generations.

Descartes says we cannot trust our senses for they may deceive us.

This shows me that the only reason we know what we see is because we reason that these things are real because we do see, hear and feel them. Giving human beings the free will to conclude that these events are real.

Cognitive thought may affect your physical senses though and determinism may affect your free will. Both determinism and free will take place in this world with determinism effecting your chooses also your chooses effecting what will then be determined to result from such action. The fact that we are able to reason and think about what we are doing and what we have done shows free will.

An example that is good to ponder free will and determinism is with human development. Since human beings are animals then why have we developed differently than every other animal on earth? We are the only animals that build houses by moving rocks, discovered fire, and use electricity. If we were determined to develop this way than why have we started to evolve

in a way that is de-evolving ourselves? Great White sharks have a similar cerebral cortex size as human beings, which give us intelligent thought, but have not developed into the beings that we are. Our thumbs give us a major advantage, but monkeys have thumbs and similar brain sizes but have not developed into the beings that we have become. I know this is because human beings started to eat fish which has caused our brain to develop more fat than monkeys and that has given us language. But we now seem to be killing our Earth and killing and driving away the animals that have once walked all over the Earth. Is this free will that we have made to commit to, which would present good and evil, or are we a virus? A virus is something we do not want to accept but our intelligent thought and over population seem to take away resources at rates that the world is unable to replenish. In return killing the very mother Earth. I believe that we have free will so that we can change this from happening all around the world. Why do we have to have major governments for they just seem to help the cause, a

long with religion and the thought of a God. If we are just animals and are determined to act this way then why are we different than every other animal in the world on the way we abuse the cycle of life. Did you ever notice that oil pumps look similar to viruses taking from their hosts?

Free will of how hard they wanted to work was the deciding factor between the brothers, not just their initial determined DNA. This showing that DNA gives you a certain levels of achievement that you can achieve but with the right exercise you can form your body to become better than predicted by giving yourself the right environment to develop your body and genes to something greater than your genes originally where.

*We* need to use our free will for the good of human kind, not just the good of our generation. We are able to choose how we want to evolve long term and as a being. We need to develop out of the pre-operational stages and notice that future generations do exist and that the world will not end while we are alive and that we our

dependence on technology will ultimately cause us to become too weak to live like wild animals and therefore we will stay the same as the real world changes around us. This will cause for the extinction of human beings. "If a nation values anything more than freedom, it will lose its freedoms; and the irony of it is that if it is comfort or money that it values more, it will lose that too," W. Maugham. As of my favorite quotes this shows how free will and our choices allow us to become what we want to become. Safety, money and technology is so important to human beings that the freedom to live as true animals is completely taken away and that we will become programmed robots with only one purpose in life. It sounds like we will lose the whole meaning behind life, to love and live free.

## **9: Metaphysical Kings**

*Saint Thomas Aquinas and Kristofor, D.R. 's  
Proof that God Exists in the Notion of Motion;  
And What the Universe Is*

- Everything is in Motion. From the particles that make up our world, to the galaxies that make up our Universe.
- There is a Cause to everything. Every action has an opposite, and equal reaction, and every action has a cause.
- Everything is Necessary Maybe not the individual beings, but the particles that make up the beings are, in order for the Universe to continue.
- There are Degrees of Being. From the smallest microorganism, and plants, to human beings, and then God
- Everything is the Universe to have Design, from everything on Earth to the beauty of the planets, and stars.

*Intro*

Saint Thomas of Aquinas, whom was instructed, and infatuated with Aristotle's work. Saint Thomas had an idea that

there are five ways to show, or to reflect upon nature, and it's laws to leave, to reason there is a God. The first notion is that everything is in motion. He had the idea, which something had to put everything in motion. Science calls this theory, the Big Bang theory, while Saint Thomas declared that someone had caused it. I have the idea that it is a mixture of both subjects.

Saint Thomas Aquinas had four other ideas to prove that a God does exist. They are; everything has a cause, if anything is necessary, that there are five degrees of being, and that there seems to be a design to the Universe, according to Saint Thomas Aquinas. There is more than this, for between every stage there is a new Enlightenment, or more knowledge. There must be a total of ten stages. For Stage Zero; Stage One; Stage Two; Stage Three; Stage Four; Stage Five; Stage Six; Stage Seven; Stage Eight; and Stage Nine. The second reason, or cause, is pretty simple; the fact that there is a cause to everything that occurs in the Universe, or other Universes. The logical idea, which since everything of what we can

see, and study, has to have a cause to it makes it seem as there must have been a cause to the Universe, and human life. This cause must have been caused by a being; in the human's egotistical mind one in which we can see, the organism Universe, and that being must have done something to cause our existence. (Cambridge).

The third reasonable cause to the existence to a God, is the idea that everything is really necessary? Isaac Newton's First Notion states; everything cannot be created from nothing, or that everything in the Universe is necessary, to the existence of what we now have, and of what is. We as a, *Homo sapiens*, human beings is not necessary to the existence of what we now have, and what we are. We, as a human being, is not necessary, but the particles that make up our bodies, are necessary to the Universe's existence. Mainly made up of hydrogen, and the bonds that they create.

The fourth idea that there must be a God is the fact that there are degrees of being. The fact that beings in this world live in a hierarchy must mean that humans' are not the highest being? We

are the egotistical to believe that we are the highest being in the Universe. For this is not true, the Universe is of an organism, made of mainly hydrogen, just as *Homo sapiens* are. Beings start from the smallest, least complex, or the hydrogen bond that everything that is alive, is composed of. In a visual from a human being; the remains of all life, oil; to the rocks that make up the interior, and the ones that rest on the top; to the sand below the seas, and the ones whom rest upon the beaches; to the smallest plankton, and bacteria; to the to the water that fills the fresh water, from the tops of the rocks, and then water poisoned by human hands, and filled with salt water; finally finishing as the smoky, less diluted air, and finishing with the atmosphere that rest upon and above, infinitely between ever being. The species, or being, that is able to eat, or consume these materials best, are the ones that are able to survive the best. Charles Darwin explained this in *Origin of the Species*, by post-claiming that the species whom is the most diverse, and therefore is able to endure more, is able to survive longer and become more knowledgeable of

their actions and surroundings. Darwin's law is informing a sense that the higher the being, the more superiority, and a higher sense, the individual, or species, will have over less developed species, or within the species, of the individuals that also are proclaimed to be of the same species. This shows that there are higher beings over humans. For *Homo sapiens* do not control all, they may control an abundance of the Earth, but they do not control the cosmos, but they may have a direct control over the space-time continuum. I will add this onto this paper a little latter.

The fifth reasonable thought to the existence of a God is that the Universe appears to have design. This design is of that of pie, and the two hundred and sixteen numbers that compose of pie, *Pie* the movie describes this notion. We observe design all throughout our world, and the Universe. The planets are spheres; the center of black holes are spheres; infinity, the Universe, is a double helix, three dimensionally, where pie, 3.1415926535897932384626433832795028841971693993751058209749445923078

164062862089986280348253421170679... has correlation to all of these shapes. Even the double helix is a circle within the center. The reason all of these objects are spheres is the fission, or gravity, and the attraction of the positive and negative, one and zero, particles that make up these objects, to the specific source that has caused for the particles to spin around each other, and cause the sphere shape as we classify it.

The plants and animals on Earth work together within the circle of life, to create an Earth, which our species is slowly destroying. The reason plants and animals work so well together is because of evolution. Photosynthesis is the energy production that plants have developed. It developed from the abundance of carbon dioxide within the air at the time that these, less complex, organisms began to develop on Earth. From photosynthesis, oxygen was created. This oxygen, two oxygen atoms, allowed for animals to be created from their original cells, until they should have reached the dinosaurs, but are currently of human beings, as the most complex

of these animal classifications. Oxygen is the fuel behind these animals to live, for it causes for a micro-nuclear fusion within the lungs of these organisms and allows for them to react to the situations that they are introduced to. There is also oxygen in water, or two parts hydrogen and one-part oxygen. Since the cells of all life was created originally from water

Where each one of these stages has a number, between zero and nine;

- I. Zero = Black, or the remains of all life, oil
- II. One = Brown, or lava remains of rocks, before heating occurs.
- III. Two = Red, or the color of lava after the heating process is taking place.
- IV. Three = Orange, or the lava from under the seas, while cooling is occurring, and resting on the beaches.
- V. Four = Yellow, or the color of sand,

below and above the seas.

- VI. Five = Green, or the microorganism, plant, and animal existence upon Earth.
- VII. Six = Blue, or the water that rests upon this earth, and gives balance to five and seven.
- VIII. Seven = Violet, or the water, after being poisoned by human hands.
- IX. Eight = Gray, or the color of the atmosphere, finishing as the smoky, less diluted air, again from humans.
- X. Nine = White, or the color of the light, the cycle of life, the clouds in the atmosphere.

The higher the number the higher the being, for more information, knowledge, is able to be stored within the being. For the more numbers that is able to stored upon the wave given off by the object. This can be also stated; the more kinetic energy that can be reached. Where the lower numbers have more potential energy,

for more numbers are able to added to the object, but less information is able to be stored.

Within the Universe, and time, there are also ten steps. These are all based on the same numbers, for everything is made of these numbers. In a Universal sense these numbers have more contraction, then the numbers that I wrote of before. The contraction is currently while you are reading, and it is for the fact that the Universe is so large, that you cannot put it on this paper, nor can it be only one number. These numbers are seen from zero to nine, where zero is where there is no kinetic energy and all potential energy, or when time, and the Universe is first being moved from a black hole, more likely this is when time and the universe, are still encased within the black hole. For no light is able to escape from a black hole, for the fission rate is more than that of light's fusion rate, and no measurement can be acknowledged with any confidence, within this wave length of life. As the numbers become larger, more kinetic energy is being applied and less potential energy, the speed

of light, that can be used. As you increase the number the number changes, from black, to brown, to red, to orange, to yellow, to green, to blue, to violet, to gray, and finishing with white. Earth and its life mainly fit within five and six, which are green and blue. For as long as we stay within this numbers we will live forever. For five and six added together equal eleven, 11. 11, in binary code, means to add power twice, and are really two, as to not stop the depletion and to conserve energy. Just as time moves, from zero, black, to nine, white, and then nine, white, to zero, black, again. These four steps are just as the infinity symbol, for they hit at the middle till the end, then the end to the middle, then the middle to the end, and then the end to the middle. Or the Universe, and time, expands then collapses, then expands, then collapses, then expands, then collapses; for a theoretically infinite amount of time, for it uses the same energy and conserves this energy. Allowing for and equal yet opposite reactions, and conservation of energy. Which are Newton's Second and Third laws of physics. Astronomically these

numbers, and the steps of being are this:

- I. Zero = Black, The Center of the Fission from a Black Hole. Black is also the color of Carbon, the make up of life on Earth, and rocks within the Universe. Black is also the color of an Absolute Zero atom, for it is releasing no energy, therefore all potential energy is still available.
- II. One = Brown, The Strongest form of Gravity, where Light escapes.
- III. Two = Red, The Inside of Hawkins Radiation, and the Strongest color of Light, Intense Heat. Color of many Giant Stars, or Normal [Average Stars] on their demise, for they have reached their finite of energy before they turn into a brown sphere, and then into a black hydrogen atom, as if into a back hole to become a white hole.

IV. Three = Orange, The outside of the Hawkins Radiation, Intense heat still, but of a level not immersed completely. Red will still become of this, as if it as counting down. Normal Stars, reach this on their expansion until they become a red [Giant Star].

V. Four = Yellow, The color of a Normal Star. By normal I mean that of only the object, color, thing, that is most visual to a Human being, and that occurs most often within the Universe. The normal curve is there for a reason, for the thing seen most often is that of the normal curve. Where ninety-nine percent of the stars in the Universe, and of the normal curve, are the most often seen by the eyes of these Gods of whom create everything. For the reason four is the normal curve, is because four is the most likely to

succeed within the evolution of the Universe. For infinity has the four sides, just as a square, but they are of a dimension much more powerful than a square, for that is why it is twisted and has curves, from the pressure of all of the Universe, or a power of nine, which is greater than that of five.

VI. Five = Green, The color of plant life on Earth. Plant life, is not just that of the plants, but also that of micro-bacteria. These are the most abundant on life on Earth. With a balance between these two economical properties, things will be able to continue on the balance between black and white., for five plus the remaining four equal nine, and five is a higher, and has more power than four, therefore five is the most likely balance between the two.

VII. Six = Blue, is the color of pure water.

Which is weird, for water has a chemical strength of seven, of what human's see, for humans actually poison the water of which is really the finished color of violet. Six is the purity color. That meaning of untouched by human beings, whom shall stay at five. Six, blue, is the base of plant life. For human's will be able to consume the needed amount of hydrogen and oxygen if they would live in the rainforest, and eat only vegetables. Which will need to happen, if human beings do poison the water.

VIII. Seven = Violet, the touched hand of water. The poisoned water from human hands. Violet is also the color of many natural gases, or composites of the lighter, less dense, elements that make up this Universe. These elements are poisonous to much life on planet Earth, or Carbon

based life forms.

IX.           Eight = Gray, the smoky land of time.

The growth of energy, or the change of hands of matter. This time is known as Infinity because the most rapid and abundant change in time is of Nuclear fusion, and this is seen as gray as a Nuclear bomb, when Helium is made. This is really One making Two, by adding Two One's. This can also be known as Infinity because if you separate the gap in which this fusion occurs, time will feel longer, this is Rapid-Eye movement in dreaming.

X.            Nine = White, is the Enlightened Being.

This color is seen as the Light, itself. For this allows for the best being to be put present. The White light is the end of the Black hole, and the Infinity being of a Recreator. This Recreation

may be of Thought, Actions, or Matter. During this stage of Being, one has a Infinite Flow of information moving threwh the Conscious to help direct the actions, thoughts, and matter in One's life.

### *True Infinity*

- Composition of It?
  - Physics; Chemistry
  - Cosmos
- When It is?
  - Seventh Dimension
- Where It is going?
  - Eight Dimension; Ninth Dimension: And Beyond,  
A repetition of past lives
  - Logos
- How It will last Forever?

- Repetition of All Dimensions; Computers
- Zero's Existence
- Why Infinity?
  - Love is the Center of the Universes
    - Calculus
- Why Not Infinity?
  - Aristotle's Metaphysics
- All Of One.
  - Ontology

### *Composition*

Theory of metaphysics, composition, will be used to describe the act or process of combining things to form a whole (Encarta, 2008.) This whole in which I speak of is of that of consciousness. Consciousness is the state of being awake and aware of what is going on around you; or somebody's mind and thoughts (Encarta, 2008.) The composition of consciousness is made of many things, from physics to chemistry.

Physics would be the actual energy in which life is composed of, and the energy in which all is conscious of. This energy may appear to be all composed of many things to some, or of that of a Dualist; or it may appear to one that this energy is not even present, or of a Dismiss; but really this energy is of one, and only one thing, or Monism (Ward, 2008.)

Why would one talk of the different modes of existence when speaking of physics? For physics is the study of scientific study of matter, energy, force and motion (Encarta, 2008.) Basically physics is the study of, or tuning of, one to the consciousness of God. For I say God, because when one is tuned in on how to affect the matter by effecting the energy, through forces and motions, one will be able to act as God, and create everything from nothing. One would create everything from nothing by speaking of and acting of the true meaning to life not just for human beings, *Homo sapiens*, but also for that of Earth, the Solar Systems, the Galaxies, the Black-holes, the White-holes, and of the Dimuniverse [a singular

organism, in which is composed of multiple existences (dimensions) while being at different distances (times) where the matter is present all at the time.] This different distances, of time, is the energy in which is able to be moved, and would make consciousness look as to be changing.

Chemistry is the reason for the changing of the energy through motion. Chemistry is the study of the structure, composition, properties, and reactive characteristics of substance (Encarta, 2008.) The substance, in which is studied, is that of the matter in which the energy flows through. The changing of the matter by the energy is a more conscious level of chemistry. This changing is more at an atomic level where Hydrogen is the most abundant and the base change in energy. Hydrogen can also be called one. For one is the atomic mass of matter that Hydrogen is composed of.

This may appear to be as if an order is to what some consider chaos. With the intellect and understanding of physics and

chemistry an order is in place. This order within existence is also known as Cosmos (Pythagoreans, Archetypes, p. 59.) This order is all around one, as energy where one is able to create a new distance in which the energy is present at. The differences one is able to be present of depend on the amount of kinetic energy [being] and potential energy [becoming] one places upon the matter. Where being would cause for a faster change and becoming would cause for a slower or no change.

### *The Scientific Method in Everyday Life*

Everyday people use the scientific method to go on about their day. The simplest things such as drinking a can of soda has the scientific method comes into play. People and all animals have this great ability to learn so even though we do not have to think the process through although we use it with every action of every day.

Lets look at the simplest task, drinking a soda drink from a can. First you need to observe the can. While observing the can you raise questions such as how do I pick up this can or how do I take

the liquid out of the can? You form a hypothesis such as I think by putting my hand around the can and then picking it up and putting my lips up to the hole, liquid will go into my mouth. Which is also your prediction. Then you test the hypothesis and the results are not null and correct.

You just went through all of the stages of the scientific method for a simple task such as taking a drink out of a can of soda. That is the way animals, including us, learn and process thoughts and actions that we act upon everyday. This is important in early childhood because that is when the humans mind is building the fastest and therefore will take in the most amounts of information and training. Now use this method to change all of ones life for the betterment of all's life.

*When is the present?*

The current energy in which one is currently riding upon is that of the seventh dimension. I say seven for this time may also be considered to be violet, or that of royalty. I say royalty for the

technology that humans are able to create cause for the most efficient way of being within the Dimuniverse. This is why human beings are being that more like a parasite [a plant or animal that lives on or in another larger host organism in a way that harms, or is to no advantage of the host (Encarta, 2008).] Where the host, currently Earth is diffusing into less massive matter or closer to the most potential energy becoming present. Once all of the potential energy becomes expunged energy is no longer present, but just a presence of matter, or zero. If humans where to be more within the cycle of the energy, such as being the energy, even if for technology, one will be able to recreate energy and therefore consciousness.

### *Where? Dimensions*

Zero is the center dimension. For it is within everything. One may see this as being within nothing but since there is matter present at all times zero is present at all times. One may see zero as the color black.

One is the base energy (dimension) present. For one is the feeding source of all other dimensions, mainly that of the middle dimension or green, grass. One may see one as the color brown.

Two is the love dimension. For it is composed of two duplicates of each one that is a result of the fusion of the first one. They can again be changed through force. One may see two as the color red.

Three is the friendly dimension. For it is composed of duplicates of one. This duplicate is able to be moved or changed slightly through the process of adding force to the energy while it moves through the matter. One may see three as orange.

Four is a more neutral color. That of matter needed to have replication, for it is the color of nuclear fusion. It is composed of four duplicates of each of the ones whom are a result of the three replications of the two replications of one. The energy can again be changed with the replication of each one. Seeing four, also seen as the sides of the infinity symbol. One may see four as the color

yellow.

Five is the most neutral and balanced dimension. Within life on Earth one will remember this as the age of the Dinosaurs. The fifth dimension is that of intelligence. It is a result of five duplications, of the four duplications, of the third duplication, of the two duplications, of the one. Where the energy is able to be changed again at a perfectly balanced being. One may see this as the color green.

Six is the purest of all dimensions. The constitution of the United States of America was written within this dimension. Where the pure intentions of freedom were meant to mean injustice for all. It is the result of six duplications, of the five duplications, of the four duplications, of the three duplications, of the second duplication, of the one. One may see six as the color blue.

Seven is the warmer of the dimensions. It is our present technological state. Justice is almost a certainty within this dimension, for no other way out of slavery, or no other way to be

free may be present. It may be felt as royalty. It is a result of the seven duplications, of the six duplications, of the five duplications, of the four duplications, of the three duplications, of the two duplications, of one. One may see seven as the color violet.

The eighth dimension is that of many things. One may see this as either the machine or of smoke. One shall call this as one thing though. This can be a very dramatic dimension. For this is the only way for the proof of free will. For the fourth dimension is one in which the spiral through the antimatter whether that would be from a natural or human caused black hole. One will have enlightenment only after this dimension though. This is seen as a close call to death, or also seeing the light (Plato, Soccio, p. 141.) The eighth dimension is a result of eight duplications, of the seven duplications, of the six duplications, of the five duplications, of the four duplications, of the three duplications, of the two duplicates, of one. One may also see eight as gray.

Nine is the most up of all dimensions. For the ninth

dimension is that of the enlightened person where one is in control of all of the other dimensions, or being present of all of the dimensions all within the same time. Some call this time travel, some call this reflection, for one calls this being. The ninth dimension is a result of the nine replications, of the eight replications, of the seven replications, of the six replications, of the five replications, of the four replications, of the three replications, of the two replications, of one. One may see nine as the color white.

Heraclitus describes the difference in the distance in which energy has traveled as the Logos. The Logos is Heraclitus' explanation of the energy in which holds all matter together (Heraclitus, Peruses, 2008.) For the Logos is a major influence of Plato and his Metaphysics, describing all as a single thing yet at different levels of being and becoming.

### *How is Infinity Valid?*

Nuclear Fusion is the process in which force is applied to hydrogen to change the composition of the atomic protons

[positive], and electrons [negative], have energy applied through the matter to move the matter to a process in which time is infinite.

Nuclear fusion is a chemical, and physical, reaction, in which the negative one and positive one are moved together so closely to make one and then multiply to make energy until infinity. Where zero, neutrons, is always present and never moves with the energy, but never disappears. In all reality zero is what bind both ups and downs, or positives and negatives, to stay as one matter.

I speak of nuclear fusion and the replication of one, for one and zero, or energy and mass must be present, for being and cosmos. Matter, or zero ties everything together, for matter is always present. The thing that ties everything together is energy, or one. Every dimension is composed of one, where the ninth dimension is nine replications, of the eight replications, of the seven replications, of the six replications, of the five replications, of the four replications, of the three replications, of the two replications, of one. For all is one and just the replications of one. For all of one is energy;

therefore all is composed of one.

Zero is present within the consciousness of one. For one is all of the same consciousness, and the same consciousness is present within all. Therefore zero is present within one and all. The same is able to be said of one. For one is of all, and all is composed of one. Therefore one is all. Within these two dialects one have found that both one and zero are valid. One must assume if one is valid, then both positive and negative must also be present. For if one is energy. Yes. Energy has both kinetic, and potentials. Yes. Negative is kinetic, where potential is positive. Therefore one must say that both negative and positive exist. One may see positive as ups and negatives as downs. Zero would be the neutral and connection between both negative and positive, for zero is never positive, nor negative, but is always present.

The easiest way to see this would be on a computer game. One the computer game, when the person dies, they reappear again immediately within the same time on the game, as if they are

regenerated or being rebirth again. This knowledge is one in which only one in the ninth dimension, enlightenment, would be aware of.

### *Why Infinity?*

Love is the center of the life, of energy. Love is the matter in which the energy is present within. Love is seen as zero, always present, but not able to cause for ups and downs. I say this for is love is zero, love is neutral, and neutrality is unable to manipulate, but is always present. The energy is able to be manipulated and the energy towards love is at times kinetic, and at times potential. Love is known as a heart.

The heart is shaped as a circle, in half [as to say positive and negative] and a triangle [as in Pythagorean's Theory.] The top is the circle, where the bottom is the triangle. The circle represents the energy in which life is composed of. The ups and downs of life are manipulated by the negative, kinetic, and positive, potential, energy. The bottom of the heart is represented by a triangle. This triangle is a representation of Pythagorean's Theory. Just as

Pythagorean's wrote of, the triangle represents the matter in which all is composed of (Pythagorean, Peruse, 2008.)

The circle on top of the heart is the energy in which all is composed of. It is also the Greek Calculus symbol for Pi (3.1415926535...). Pi is the circumference divided by the diameter, or the circle cut in half and laid flat onto a line.

The triangle on the bottom of the heart is the matter in which all is composed of. It is also the shape in which Pythagorean's Theory is based upon. Pythagorean's Theory is ( $a^2 + b^2 = c^2$ ), where (a) and (b) and (c) are all sides of a triangle, or matter.

When you take energy and its composition of one, or Hydrogen, you will receive infinity. The rate, or distance, in which Hydrogen replicated with fusion is that of Einstein's Theory of Relativity ( $E = Mc^2$ .) One takes the fusion rate of Hydrogen, as the speed of light (c), which is a rate of ( $9 \times 10^{36}$ ). One must then take (M) = (one), and ( $c^2$ ) is ( $9 \times 10^{36}$ ), therefore [E =

$1(9 \times 10^{36})] = (9 \times 10^{36})$ . One must then figure pi into the equation. To do this one must multiply the answer of  $[(E=Mc^2)$  Pi],  $(9 \times 10^{36}) (3.1415926535) = \{(2.8274333882 \times 10^{37})^{36}\}$ . Any number, for the mass of the object, multiplied by 36, the fusion rate of hydrogen, twice, as to say two hydrogen's meeting will be of Infinity. Except for one, for one times any number is one. But 1.1 needs three rates of fusion to take place and 1.111 needs for rates of hydrogen. When ever a mass is  $((1 \times 10^{36})^{36})$  or larger Infinity takes place. One takes Pythagorean's Theory, or the Theory of Relativity, as the bottom of the heart, and multiplies it by Pi, the top of the heart. You take Pi into the equation for the energy does not move in a straight line, but around the matter in a circular motion.

Since Hydrogen is the matter of one, and one is within all, hydrogen is within all. Since the movement, or energy, of one is within all. One must consider one to be infinity, and all to be infinite. For one must consider time and all of consciousness to be infinite.

### *Why Not Infinity?*

Infinity is a term that scares people, for they do not know of what infinity is. One has just made infinity valid through intellect; therefore one is not scared of infinity for one is aware of what infinity is. Infinity is love. Love of one, and love of all; love of all and love of one. Infinity is love of energy and matter.

There may be a way to escape infinity. That is if one is able to prevent the closed circuit of the cosmos to no longer be that of closed, but of an open circuit. An open circuit is that of a line, and not of a circle. Infinity is only possible if one has pi, or energy within. Infinity may not be present, or finite, if human beings continue to use finite resources for energy and matter. If an open circuit continues to a larger, Universal scale, and not just within technology, infinity may cease to exist. This may seem impossible and was deemed impossible earlier within this dialect. For the energy that is of all is a closed circuit, or repeating circuit. The energy of technology is, in 2008 Common Era, mainly that of an

open circuit, or finite circuit of energy. Finite meaning that there is a beginning and an end (Aristotle, Peruses, 2008.)

One has pronounced that there is not a beginning, nor an end. For one is matter in which energy flows through within circles, or a repeating motion. One has proved valid that one is infinite.

### *All of One*

Ontology is the study being, the most general branch of metaphysics, concerned with the nature of being (Encarta, 2008.) Broken down with Latin, Ontology would be the study of one. The study of the energy and the matter, in which all is composed of, while understanding that the energy and matter coexist as one single being: ontology. Being would be living within the closed circuit of the natural processes of life and infinity.

### *Philosopher Kings*

Many people look at the bright lights and the beautiful colors, and think that that is it all! That the artificial lights and colors that make up the evil that human's are, are true beauty, for materials

to them is wealth. This is not real beauty, nor am I people, a person is whom I speak from. True beauty is something in which all is composed of. For true beauty is the life in which I am aware of, a life in which the mover of the actions and the reflections in which I think is all because of myself, a life in which I am the mover of all, for infinity.

What? That is of the people. I am why, and why not! Why not is a good one. For why not travel through the different dimensions of the Dimuniverse? Or why would you want to kill oneself? If it is sleeping you want, then sleep, you have tomorrow, and the next  $(9.3985245597e+18^{36})^{36}$  years, or Infinity to be awake. Infinity is the rate of time, or the distance that hydrogen atoms move when the fusion rate increases in time by multiples of oneself, or something that may look like 11! This would be the level of God. God is the knowledge that your actions will lead to infinity amount of time in which one would never die, or would be immortal. If one wants to sleep, then change your surroundings. It

is as easy as moving, forgetting the past and walking away. You actions need to be taken into affect, and one shall never burn a bridge, but one really should never put oil onto the fire just to see how hot you can make it.

Infinity, of matter and energy, is true, and the true beauty. For the matter and energy will always be part of life, and that he energy moves on and for the matter. For matter is the thoughts, where energy is the actions, or change. Matter would not exist without the energy, and neither would the energy exist without the matter. People would not be alive without the ringleaders and neither would the ringleaders be alive without the people.
