KHOSMO

Decentralize the world.

TABLE OF CONTENT

1. Abstract

1.1. What is KHOSMO?

Khosmo is an idea born in the first half of 2018 from five people who strongly believe that the world is changing drastically with the advent of blockchain technology. Every day, we can observe how this technology is spreading more and more in every technological and non-technological field.

The Blockchain is the underlying technology on which **Bitcoin** and many other cryptocurrencies operate. In short: the blockchain allows anybody to send any amount of money (value) to anybody else in minutes, without the need to ask permission to do so. No more bank teller asking "why are you sending all this money to this person in China?".

The internet freed up the circulation of information and in just a couple of decades took down corrupt governments, corporations and sprung countless industries into life. **Blockchain** will allow resources to flow freely wherever society decides they need to go.

We believe in the free dissemination of knowledge and dream of a world free from the chains of banks.

These beliefs have pushed us and motivated us to put into practice what we think, giving life to Khosmo.

1.2. Our vision

Our vision is a world free from the suffocating regulations that continually hinder the new start-ups and businesses that have been operating for years.

We believe in a world where there is no need for third-party permission to transfer value between two people.

As the first cypherpunks created Bitcoin in 2008, 10 years later we follow their footsteps creating Khosmo.

1.3. The HTML technology

Khosmo is based on the HTMLCOIN platform, a hybrid between BTC and ETH with which we have created our token.

Quoting the HTML Whitepaper:

"Htmlcoin is an advanced smart contracting platform, not a Bitcoin clone. The value of the Html Blockchain will be its smart contract based projects and the services offered on its platform.

• Enterprises, communities, and projects will use the Htmlcoin platform to crowdfund and run their businesses.

• Users will buy tokens in crowdfunded or established projects running on the Htmlcoin platform.

• Users will buy Htmlcoins to store value or transact across the network.

• Businesses and users will use the Htmlcoin platform for communication and education purposes.

The innovative construction of the Html Blockchain allows for practically every conceivable concept to be realized on its platform. All types and sizes of companies, schools, and communities can develop their ideas and projects on the Htmlcoin platform"

2. Khosmox

2.1. Khosmox

One of the most pressing problems for customers is the very high commissions that current exchanges offer.
The product we want to offer is a competitive exchange with the lowest existing fees and the best security for traders.

We are aware that the number of exchanges increases day by day. Analyzing all the existing ones, we asked ourselves what were the factors that could make an exchange better than the others.
From this question Khosmox is born.
The biggest problems of existing exchanges are:
– Security
– Scalability
– High fees
– Difficulty in use by less experienced users
– Protection of user privacy
We are aware that building an exchange is something that requires an huge work from the developers and that if things are not done to perfection, the funds and privacy of users would be endangered.
For this reason we believe that with our skills and experience we can revolutionize the trade of cryptocurrencies.

Khosmox, in the initial period will be an exchange of pure cryptocurrencies.
 It will support trading in the following coins:

- BTC
- BCH
- ETH
- LTC
- HTML
- KHO

Device Coverage

We will provide cross-platform trading clients for:

- Web-based trading client
- Android
- iOS

Listing

We will do a careful analysis and choose only the most important coins or those with **more potential**.

We will also list coins / tokens born recently, if they meet our standards and will show to be strong and valid projects.

We will ask for a fee to be listed on our exchange, because what we want is to offer traders quality projects, avoiding scam and pump & dump.

2.2. Revenue Model

Khosmox's revenue will come from the following sources:

Source	Description
Exchange Fee	Khosmox will charge only a 0.1% fixed fee per trade. We will also introduce discount and 0 fee promotion. The fee will stay forever under 0.1%.
Withdrawal Fee	There will be a small fee for withdrawals.
Listing Fee	There will be a fee that coins will pay to be listed on Khosmox. This fee this fee will be variable in time.

3. KHO and the Team

3.1. KHO token

KHOSMO is a token issued on the HTMLCOIN blockchain. Its design follows the widely adopted token implementation standards. This allows token holders to easily store and manage their KHO tokens using existing solutions including HTMLCOIN Wallet.

There are only 18,000,000 KHO tokens and this number will remain the same forever. 70% of tokens will freely distribuited with bountys, 10% will be used for the development of Khosmox and 20% will be allocated to the founding team. To learn how to get KHO, visit khosmo.net

3.2. The Team

After thinking about it, we decided to remain anonymous. We do not want Khosmo to have faces behind it, but let Khosmo himself be the face. Our representative is Joe Harwin, who was the originator of the project. We are several people immersed in the blockchain sector with years of experience behind us, we know what we do, how much work it requires and we decided to dedicate full time to our project.

We have not launched an ICO because we do not want to ask people for money, we have our sources for this. We will distribute KHO for free to the first people who will come into our family.

4. The market and financial model

4.1. How will be the crypto market size in the next years?

We strongly believe that we are at the beginning of a radical revolution in the economic sphere. In the past years, with the advent of blockchain we have witnessed a radical change in the world. The current interest in blockchain technology and cryptocurrencies has increased exponentially in recent years and we believe the rally has just begun. Our vision sees a decidedly larger increase in the coming years, with the ever-increasing interest from the most important institutions.
In any case, what we are aiming at is the diffusion among the single people of our cryptocurrency and educating everyone about money.
5. Final Conclusion

5.1. Conclusion

To conclude, we would like to thank all the people who believe in us and in our project. Our vision is to change the world in a more transparent, decentralized way. Thanks to blockchain technology all this has become possible today, which is why we decided to participate in this revolution by creating Khosmo. We invite you to follow the developments of our project using all our communication channels that you can find on our website.

Thank you for taking your time reading our Whitepaper.

In blockchain we trust.

Khosmo Team
