

Complimentary In-Service for Preschool Teachers on Sensory Processing & Related Motor Development

Could your teaching staff use help working with students who:

- struggle to stay in circle time?
- avoid certain activities?
- become frustrated and upset during motor activities?
- take excessive risks?
- crash into things and others?
- have trouble with transitions?

PlaySteps is offering a **free in-service** for preschool teachers, at your preschool's site, to address these issues and related concerns you may have. Experienced PlaySteps occupational therapists will tailor the presentation to your team's needs, after conducting a school observation prior to your in-service. Length of the in-service may be 30 - 90 minutes, depending on your time available, and will include a Q&A time and handouts. We want to help you:

- identify children with sensory processing challenges
- support these children in your classroom
- set all students up for success!
- know when and how to make a referral

If interested in an in-service for your preschool, please contact:

Jeff Marks, Director

What We Do

In a nurturing, child-centered environment, we support development in the areas of sensory processing, motor coordination, and the myriad of functional skills built upon these areas.

As occupational therapists, we work to enable children to participate successfully in the meaningful activities of their everyday lives – whether that's getting ready in the morning, riding a bike, writing legibly, learning a new move in karate class, drawing or cutting during arts and crafts, eating dinner with the family, navigating a busy play-ground with peers, or completing any number of other daily tasks.

For children with developmental, sensory, or motor coordination challenges, these everyday activities can become discouraging, and at times frustrating for their parents as well. We work with children to build the confidence and skills necessary for success in these "occupations" of everyday life.
