## SGR TRACTOR GRAPPLES

Convert your tractor into a productive forest machine.

### ***GET WORK DONE!***

A VALBY® SGR Tractor Grapple lets you skid multiple tree-length stems from your cutting location to your processing location. You can also use the tractor grapple to lift light logs, slabs, brush and stacks of pulpwood completely off the ground, helping you keep the material clean and dry.

VALBY® SGR 76 Tractor Grapples are built using a bypass design whereby the single tine on one side of the grapple passes through the gap between the double tines on the opposite side of the grapple. The tines tighten up completely on the load, keeping it balanced and in control. The result is that logs are easily picked up and "rolled in." The SGR 48 is designed for lighter duty work, and accomplishes the same task using one tine on each side.

Both models are built with the hinge point close to the tractor, *enabling the tractor to turn sharply when skidding.*

The SGR 76 has a hydraulic side shift of 30 degrees left and right of center, allowing the user to pick up logs without having to reposition the tractor or dismount to reposition the grapple. The SGR 48, being lighter, has a manual side shift.

Additional Features,  
Benefits &  
Specifications

## Side Shift Hydraulics

The side-shift function enables easy placement of the material in stacks. The height of the stacks depends on the tractor, but four to five foot stacking heights are typical. Generally speaking, tractors with hydraulic top links are able to stack higher.

## Stacking

## Butt Plate

The butt plate enables the grapple to bunch logs and piles, and prevents logs from damaging the tractor when being picked up.

## Heel Bar

The heel bar enables light logs to be lifted and stacked, prevents logs from getting hung up on the frame, and keeps logs in line while skidding.

Grease Fittings at every pivot point.

*Every SGR has a Parking Stand for easy storage and hook-up.*

SGR 48 Side Shift Manual Lock  
(Shown in unlocked position for skidding full length trees)

## VALBY® SGR TRACTOR GRAPPLE SPECIFICATIONS

Model	Weight	Opening	Side Shift	Pressure	Tractor HP	Hitch	Hydraulics
SGR 76	790 lbs	76"	Hydraulic 30°	2900 psi	50-100	Cat II	2 circuits
SGR 48	220 lbs	48"	Manual	2900 psi	20-40	Cat I	1 circuit
