

9/18/19

Hi Everyone,

We here at BRT Technologies would like to take this moment to thank Vital for its decade of cooperation and integration. We are sad to hear that they are suddenly choosing to end the relationship and arrangement we have had with them since 2007.

We would also like to add that BRT Technologies takes the security of data very seriously. Our systems are designed with security in mind. In fact, at no time does any BRT software connect to or interact with any Vital database. All interactions are with Vital interface software written by Vital engineers.

For those clients affected by Vital's decision to end its integration with our Powerpad and PowerComp software let it be known BRT is still more than happy to work with Vital on a possible case by case basis, so please contact Vital if you wish for them to reconsider it's stance concerning you and your municipalities and/or company.

We will, of course, continue to keep you updated on any developments and please be sure to check our website ( <http://www.brtechnologies.com> ) for additional news and BRT options as we all move forward.

Sincerely,

The team at BRT Technologies  
[BRT Technologies](http://www.brtechnologies.com)
