

OR-ganizer™

Why did we make it?

Although laparoscopic Instruments only fall occasionally, the operating room team is usually anxious about this possibility. There have been previous products that were designed to hold the instruments. However, no existing products allow for quick and smooth instrument exchanges, making most of these products useless.

To solve this problem, we created the OR-ganizer, the only device designed for the purpose of organizing while allowing for quick instrument exchanges during surgery. Now, the OR team is less anxious and can focus on the patient and the hospital saves costs and time.

Estimated Cost saving analysis:

1. Cost of a fallen instrument \$171* X chance of falling 1/10 cases = \$17.10
2. Savings on assistant time: \$21** hourly rate for surgical assistants x eliminating the need for an additional assistant in one quarter of cases 1/4FTU = \$5.25
3. Saves 2% of operative time x \$36 average cost of a minute in the OR †x 60 minutes case = \$43.20

Total Savings: \$65.55 per case when using OR-ganizer

Net Savings per unit: \$65.55 - \$19.99 = **\$45.66**
