CARDINAL LoE³-366 GLASS

Features / Benefits Comparison

Standard Clear Insulating Glass

Cooler in Summer

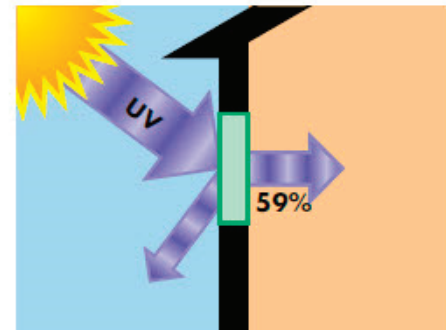

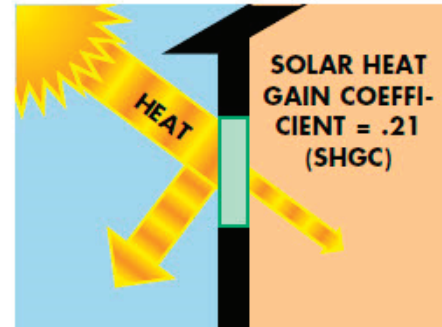

The total solar energy transmitted through Cardinal LoE³-366 glass is 70% less than that transmitted by standard clear insulating glass.

Cardinal LoE³-366:

*Reduces the solar heat gain coefficient (SHGC) from .75 to .21

*Blocks 95% of the sun's damaging ultraviolet rays-
Helps your furniture, carpets, curtains and wall coverings stay beautiful for years to come.

Cardinal LoE³-366 Insulating Glass

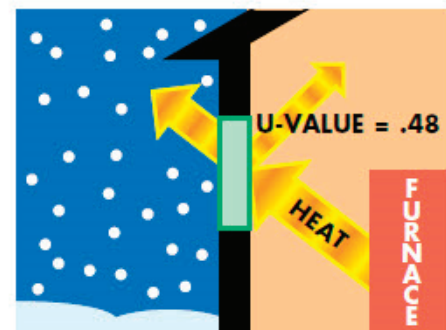

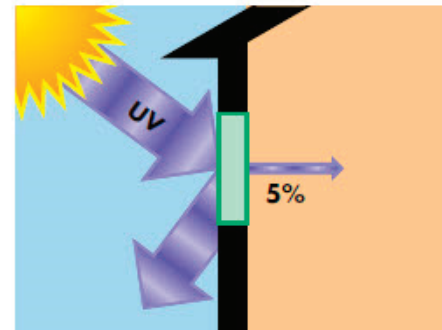

Warmer in Winter

Cardinal LoE³-366 reduces the U-Factor (insulating value) to a .29.

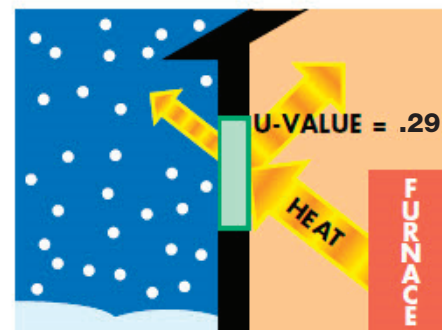

*Lower U-value means higher performance

*Reduces furnace heat loss

*Help reduce heating energy costs

Cardinal LoE³-366 adds a third layer of silver coating **RESULT:** a clear coating that blocks even more solar gain, reflects heat and lets the light stream in. Also, there are no heavy bronze or smoke-colored tints to darken your home. LoE³-366 actually outperforms the tinted glass often used in warm climates.
