

# The Trilogy Difference

The Trilogy Difference – that which makes us unique – cannot be confined to any single factor. Rather, we differentiate ourselves through superior solutions across every discernible criteria.

## Typical Market Solutions

---

- Incineration or other decades-old methods
- Excess carbon and other emissions
- Significant ash and other waste byproducts diverted to landfills
- Low and inefficient energy production
- Technologies either highly dated, or too new and unproven by market standards
- Uncertain bank-ability: lack of commitments covering all project costs
- Insufficient warranties, guaranties and insurances covering overall performance
- Residual project risks left with municipality or host
- One size fits all approach
- Lack of flexibility or scalability
- Limited community education and outreach

## The Trilogy Difference

---

- Latest non-combustion approaches
- Near zero emissions; carbon neutral process
- Less than 5% ash or waste byproducts left; exponentially extends landfill life
- Highest energy output of any system
- Latest proven, patented, market-tested and fully financeable technologies
- Fully bankable projects: commitments covering 100% of all project costs
- Guarantees, insurances and “performance wraps” covering entire system
- All project risks insured or covered by credit-worthy project participants
- Projects tailored to meet specific needs
- Scalable projects adaptable to changing demands
- Success predicated on education and outreach

Trilogy Financial Group’s projects outperform competitors and surpass benchmarks across every measurable indicia.
