The difference between sanitizing and disinfecting is the level of kill and the types of micro-organisms that the product is effective against. Disinfecting provides a higher level of microbial kill and is generally effective against bacteria, viruses, and fungi. Sanitizing is only effective against bacteria. Surfaces must be pre-cleaned prior to disinfecting to remove any surface debris thus allowing maximize exposure of the product onto to the intended surface.

TO DISINFECT: Allow surface to remain wet for 7 minutes.
TO SANITIZE: Let stand for 30 seconds

You will be happy to learn that when used in accordance to label directions, the current Formulation of Spray Away Cleaner & Stain Remover is effective against:

**Disinfection against Bacteria:**
- Campylobacter jejune
- *Escherichia coli* 0157:H7 (E. coli0157:H7)
- Listeria monocytogens (Listeria)
- *Pseudomonas aeruginosa* (Pseudomonas)
- *Salmonella choleraesuis*
- *Staphylococcus aureus* (Staph)

**Disinfection against Virus:**
- Herpes Simplex Virus Type 1 & 2
- Human Immunodeficiency Virus Type 1 [HIV-1] [AIDS Virus]
- Poliovirus Type 1
- Respiratory Syncytial Virus (RSV)
- C-Diff/Clostridium Difficile
- Rotavirus WA
- (Avian) Influenza A Virus {H1N1} (Strain A/Malay/302/54)
- Norovirus/Calivirdae
- Hepatitis B and C
- Rotavirus

**Sanitization against Bacteria:**
- Enterobacter aero genes
- *Salmonella* (choleraesuis) enteric (Salmonella)
- *Staphylococcus ureus* (Staph)
- ESBL/Estended spectrum beta-lactamases
- Streptococcus pyogenes
- MRSA (HA-MRSA and CA-MRSA)
- *P. aeruginosa*
- *S. aureus*
- *C. albicans*
- *A. brasiliensis*
- *P. aeurginosa*
- *E. coli*

Fungi:
• Aspergillus Niger
• Mold and Black Mold
