PinnaCal Is Open and Here to Support You

PinnaCal is open! We operate in support of essential business and therefore, will continue to conduct business within the proper safety parameters set by the CDC and State of Montana due to COVID-19.

Please know that we are taking extra safety and sanitary precautions to ensure the health and safety of our customers and staff and will keep our website, www.pinnacalmt.com, updated so you know if and when things may change. We also encourage you to reach out via phone or email if you have any questions or concerns.

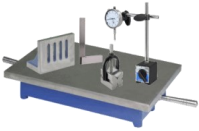

Now Calibrating Oxygen Gauges!

PinnaCal is now providing calibration of oxygen gauges. We know these commonly used instruments require special care which is why after calibration, oxygen gauges are cleaned and bagged to Level 1 standards in accordance with ANSI B40.1 prior to being returned to you.

If you have any questions about this new service or if we can be of any assistance, please feel free to contact us. We'd love to help!

Surface Plates or Optical Comparators?

Do you need surface plates or optical comparators calibrated? If you are looking for these services, we encourage you to reach out to us and let us know!

We have recently had several inquiries regarding these capabilities and we are trying to learn more about your needs to see if we can begin providing these services. How many of these items do you have? When do they need calibrated? Do you require on site service and if so, where are you located?
