

MUZZLE BRAKES AND/OR SUPPRESSORS

Muzzle brakes and Suppressors are a great way to control recoil, barrel whip and sound.

Muzzle brakes will increase noise exponentially, however, their ability to reduce recoil and barrel whip/jump will put you back on target faster, which will help improve your accuracy.

Suppressors are by far the best option here, though they are expensive and have long wait times for purchase. They reduce noise and decrease barrel whip/jump, and this will also help improve your accuracy.
