

GRAVITY

Gravity is the force that pulls on everything on the earth. It's what keeps everything setting or standing on earth. In shooting, it's what we call a constant. It has the same affect on the bullet every time you fire your gun. It pulls the bullet towards the ground and with that, slows the bullet during the flight. We can see this in the ballistic drop charts. You can observe how the bullet drops faster the further it gets from the barrel. The bullet slows as it travels to the target, but gravity is a constant.
