

Our belief that we can attain prevention from diseases originating in filth by injecting toxic substances into the body, has made public authorities in many American cities callous to the demands for ordinances and regulations providing pure milk, ice cream, meat, and other foods.

Likewise has come superlative faith in our methods of controlling disease-bearing and crop-destroying insects by atmospheric spraying with DDT and other laboratory products. It seemed at first that great advancement had been made over previous days, when spraying was limited to individual plants and trees; but the cost in the destruction of beneficial species had not been assayed. Here again, we have put man the ingenious on a throne above Nature, and his assaults on the insect world have been prodigal and ruthless. If we had followed the counsel of Dr. Campbell and encouraged an increase of dragonflies and bats, natural enemies of the anopholes mosquito, hundreds of thousands of people might not today be suffering with malaria, which prevails as a constant scourge, despite costly chemical "controls," and drugs which only suppress the symptoms of the disease.

An example of the folly of atmospheric spraying occurred in the summer of 1948 in

**• As military tankers spew white chemical plumes across America at a cost of \$3,448 per hour per tanker, we are reminded of Dr. Leonard Cole's 1994 testimony before a Senate Committee regarding 45 years of open air testing during which military aircraft sprayed American cities with bacteria, fungus and carcinogenic chemicals.**

---

1994 – 45 years = 1949

Book 2, details things about our environment that most people are clueless about. Book 2 scares people too much to read it and what I call Book 3, that explains Bird Flue, is 10x scarier.

- ✓ These 2 are a tiny example of the 288 pages that make up Book 2. Book 2 is a study of why they added titanium dioxide to the air, junk foods and personal care products with the goal of harming the human thyroid worldwide.
