

# **Animal Parasites / Infections, etc.**

**Equine protozoal myeloencephalitis**, or **EPM**, is a disease caused by a protozoal infection of the central nervous system of horses.

My Opinion: There are well over 300+ known carriers of what has the blanket name of Lymes disease. Lymes Disease is a politically correct name for the old fashioned worm that causes Syphilis. It has been proven that all humans of the past 300 years have all died with Syphilis worms eating their bones up and if they lived long enough, the worms ate their bones until it was the cause of death.

Everything from mosquitoes, every biting bug and all the pets such as dogs, cats, etc. are all carriers of this microscopic worm that used to be called Syphilis. In simple words, Lymes Disease is the new plague that is an end result of a plague that has been building over the past 300 years. From what I have read and my theory as well, you're not going to find a mammal that does not have the Lymes Worms in their bones. Modernization polluting our air, water and foods is causing a rapid decent of the immune systems abilities to defend against these invasive worms. This is causing more diseases to show up at younger ages. The more bazaar drugs are used, the more these syphilis worms mutate; some authors suggest Lymes Disease is about 20x advanced of the old fashioned Syphilis simply because the worms have mutated as more and more drugs have been used.

This applies to all mammals in my opinion. Look at the subject of the horse. The one major problem is this; the horses' liver must be healthy or the horse will fail to have health. Every drug used, every chemical consumed, all leads to an ill liver. Every metal used does major harm to all humans, no one should ever, for any reason ever, use colloidal silver, gold, copper metals ever...these metals enter the blood stream, collect in the arteries, fill up the lymph glands and clog the skin and hair for a lifetime.

Arsenic is a major poison to mammals. All well water within the U.S.A. is said to have unacceptable amounts of arsenic. If any mammal is sickly, one thing to check for is arsenic poisoning. All poisons simply harm the liver of all mammals. As the internal organs fail, the immune systems fail and parasites simply do their job; the job

to eliminate the unhealthy and dissolve their body back into the soil. Killing the worms is a losing battle, but can extend life in many situations. The only true cure is a less toxic life; this goes for all mammals. What poisons the horse poisons humans, pets, livestock and alike.....

There are over 20,000 known parasites. The word Candida is a word created that covers all 20,000 and the over 1,000 diagnosed diseases parasites cause. I have one theory; seek to control the Lymes/syphilis worms which are smallest and most deadly. Medical science has no real solutions for any parasite. The common bed bugs are at epidemic levels from coast to coast, with college dorms considered 100% infested and every human that test low Iron, is suggested to be a bed bug problem.

World wide in herbal history, each country has 1-2 herbs that were used historically dating back to 100 years ago to treat Syphilis. Syphilis was a big issue back then, while today they use the word, Lymes. In my opinion, there is no reason to research and seek to treat any one specific worm/bacteria/virus they are all "parasites". I have always considered herbs approx. 1/6<sup>th</sup> the program. Naturally simple herbs can not correct past diet, past habits, past drug use, past inherited problems, toxic water and worst of all, the things human do to animals when they are sick.

Giving a mammal such things as Clorox water or any substance that is toxic, will set that mammal backwards. No one should ever use Clorox internally or externally for mammal health. It is extremely toxic, acidic and Dr. Hulda Clark considered it the number one cause of cancer in America. She further stated that Clorox is so toxic, it should be stored outside the home, because the fumes coming off this product is cancer causing.

**Natural Herbs:** Natural herbs supply the healthy liver essential herbal minerals that the liver and circulatory systems create the proper chemicals that the mammal then uses to defeat the parasites and proper minerals that are used to maintain and rebuild the flesh and bones. Extremely concentrated herbs are so potent, that they do harm to parasites by contact until the digestive systems have diluted them enough. Otherwise it is the liver that converts these herbs into

the proper form that the blood then uses. Keep in mind, any place the blood does not flow, parasites will flourish and the number one place affected by lymes / syphilis is dead teeth and bad joints. Advanced lymes in my opinion are those getting their hips and knee joints replaced and have plenty of dental work.

**Professional Strength Animal Parasite Control: Highly concentrated**, do not get on skin, keep away from children. If skin contact, wash with soap and water. If accidentally gets into skin, apply any form of cooking oil, such as olive oil to dilute and then wash with soap and water.

**Suggested use:** 1 drop to a gallon of water for all animals.

**Dogs** and large animals: 1 dropper to a 2 ounce dropper bottle filled with olive oil. Give 1 dropper doses direct in the mouth of the dog, etc.

**Cats** do not sweat easily. They often have too many parasites and have trouble when the parasites are killed too quickly. A ¼ dropper directly in the mouth will often make the cat look badly for 1-2 days as their skin sweats and their hair looks badly. After they come out of this, our cats do wonderfully. The risk is always with cats that killing their worms will be too hard on them and they can bleed to death or become too constipated with all the dead waste. Use caution deworming cats and all small animals. Use small doses and monitor their results.

**Cattle:** With our cattle, I put 1 dropper in the rubber made stock tank each time we fill it. The cattle never consume water that does not have this product added. My theory is that our cattle are the most parasite free cattle on earth.

**Extreme use:** I personally use this product full at 50% strength. Mixing 50/50 with olive oil and putting 1 full dropper in a dog's mouth direct. The dog will slobber for about 15 seconds from the intense heat produced from the very concentrated herbs. This heat is always a result from the rush of blood to come carry the herbs away. I do this one time per month for all our pets and have never taken any animal to the vets or use of any drug for animal health beyond this product. This is a **Professional Strength herbal product**; I suggest it is the

most potent herbal product made on the planet. I know of nothing that could be stronger for animal health. It is for Amish Farm use only. The only harm it can do by having contact is from the herbs entering the skin so fast, that the blood would send blood to the surface to carry the herbs away, causing redness and extreme cayenne/spice type burn. Use great care to keep this product away from children and away from the face.

**Ingredients:** Wormseed, Wormwood, Cayenne, Oregano, Garlic, Thuji, Juniper Berry, Caraway Seed, Thyme, Allspice Pimcato, Corinder, Fennel, Bergamot, Cardamom, etc. extreme concentrated extracts.
