

Company Policy for Eckerle Technologies GmbH

1. The company would like to adopt a leading position in the market and be commercially successful by having satisfied customers and motivated staff.
2. For Eckerle Technologies GmbH, the philosophy means: We would like to be better in the areas of quality, environmental protection and energy efficiency than our competitors in every market where we offer our products! For this purpose, ET is committed to ensuring the availability of information and resources to achieve the company's goals.
3. Legal requirements and product safety take highest priority. The safety of our products corresponds to the current state-of-the-art technology. Legal requirements are complied with all areas.
4. Eckerle Technologies GmbH contributes to the protection of the environment, to sustainable business development and to the preservation of our natural resources by means of our environmentally-friendly and energy-efficient products in the areas of lighting and pumps and with our resource-saving production. Eckerle Technologies GmbH are making advanced environmentally-friendly technologies available worldwide and are applying these to the entire lifecycle of their products. The obligation to continually strive to improve in quality, save environment and energy is of utmost importance to us. The technologies used by the ET company help to increase productivity in industry. The comprehensive use will improve people's quality of life
5. The management and staff at Eckerle Technologies GmbH all contribute to the realisation of our quality, environmental and energy efficiency goals. Our behaviour towards one another is cooperative and supportive.
6. There is an internal customer/supplier relationship i.e. the next in the process is an internal customer.
7. The continuous improvement process to increase quality, environmental and energy efficiency in order to reduce costs and to protect the environment plays a major role in our everyday work. The commitment to continuous improvement in the areas of quality and the environment, as well as the improvement of energy-related services through the procurement of energy-efficient products and services as well as the improvement of energy-related services through design-related activities are a matter of course for us.
8. Preventing errors is much more important to us than just recognising errors. The sources of an error are analysed thoroughly in order to suppress the cause of the error permanently.
9. We are committed to maintaining a fair relationship with our suppliers.
10. Each individual employee is responsible for ongoing quality assurance, protection of the environment as well as increasing of energy efficiency.
